The Maidenhair Tree

(GINKGO BILOBA)

The Maidenhair Tree, known botanically as *Ginkgo biloba* or, formerly, *Salisburia adiantifolia*, is at once one of the rarest and most beautiful of our hardy trees. Its former botanical name seemed particularly apt, as the leaves, unique in form and alluring in their charm, serve to at once remind one of the fronds of the maidenhair (*Adiantum*). I know of no tree comparable in grace and symmetry and soft coloring to a specimen of this ginkgo. The limbs and boughs are stiff and straight, while the minor shoots are of spreading growth. When the tree is in full leaf it is as though a mantle of soft green had fallen and enveloped the tree boughs, hanging in soft folds and causing the slenderer shoots to droop gracefully. There are few fine trees of it in this country, two of the best being those in the King's gardens at Windsor, and in the Royal Gardens, Kew.

The Maidenhair Tree is equally delightful in spring when the young leaves unfold—a tender green: In summer when each fern-like leaf has reached its fullness of form and color, and in autumn when, as each leaf turns, some to light, some to deep yellow, others to red or brown, the whole tree is clothed in a mass of brilliant colors. Not only for its intrinsic charm is the *Ginkgo* valued, for it has a history that is as remarkable as it is full of interest. In the first place it is monotypic, that is to say, it is the sole representative of the genus. It is also the sole representative of a type of vegetation long since extinct. Some remarks in this connection in Veitch's "Manual of Coniferae" are well worth reproduction.

"The existing species is the sole survivor of an unknown number of others widely dispersed during geological ages over what is now the temperate and colder part of the Northern Hemisphere. Fossil remains of *Ginkgo* have been discovered in systems that were in course of formation at a remote epoch of the earth's history, and show conclusively that the genus is of astonishing antiquity and that the first appearance of its ancestral form antedates that of every other existing tree by aeons of time. The *Ginkgo* thus presents to us at least one form of vegetation that flourished on the earth when it was inhabited by unwieldy *Ichthyosauri*, gigantic toads and monster *Deinotheriums*, ages before man entered upon his inheritance. If the association of the *Ginkgo* with the remote past is of a kind to excite wonder, its recent history is scarcely less a subject for surprise, for the origin of the existing species is shrouded in mystery as obscure as that of its remote ancestors. Its habitat is practically unknown. No naturalist can say that he has seen it in a wild state, and hypothesis alone suggests that it may possibly be found in some unexplored district in Eastern Mongolia. For centuries it has been preserved alive by the Chinese and Japanese who, by associating it with their religious worship and planting it near their shrines and temples have invested it with a kind of sanctity that has contributed immensely to its preservation amidst a dense population whose resources of fuel and timber have always been restricted. Thus preserved, it stands alone, a perfect stranger in the midst of recent vegetable forms."

In this country the Maidenhair Tree seems to be little planted and it is of slow growth until well established. Like many deciduous trees it will grow well in the neighborhood of large towns. The leaves as

they fall in the autumn take the sooty deposit with them and the tree starts the next year with fresh and clean foliage. There are three well marked varieties in cultivation, *macrophylla* with larger leaves than those of the type, *pendula* which has a weeping habit of growth, and *variegata*, whose leaves are blotched and streaked with yellow.

Harry H. Thomas

London, England.

Cattleya gigas

(See Frontispiece)

This summer-flowering orchid, native of Columbia, is undoubtedly one of the finest *cattleyas* known, giving the largest and the most beautifully colored flowers on spikes bearing four to ten flowers each, of immense size, sepals and petals pale rose and the lip dark, of great width, having two conspicuous eyelike yellow blotches in the throat.

The type of *Gigas* shown in the picture is what is termed the *Hardyana* type and the photograph was taken last year at the orchid nurseries of the Julius Roehrs Co., at Rutherford, N. J., it being one of the remaining plants of an importation of sixty-two cases. This particular variety must be grown as close to the light as possible and in the warmest part of the house.

The
passing of the
wood-cut

De-lighted we should be to know that the half-tone engraving has at last killed beyond any resurrection the old-fashioned wood-cut as a seed catalogue illustration and that we have seen the last of these "ugly, inappropriate and inaccurate" old marvels. Still it is well to bear in mind that neither photograph nor the half-tone are beyond human ingenuity to mend and when it comes to inaccuracies and exaggerations there is almost no limit to the monkey-shines that may be perpetrated through these "truthful" processes.

Reform
in the "novelty"
business

Mr. McFarland's talk to the American Seed Association, on catalogue making, which appears in part in this issue, will bear reading over and over again. Whatever one's opinion may be as to the correctness of some of the essayist's views, there can be but one sentiment on the "Novelty" question, and that will be one of entire harmony with Mr. McFarland. Nothing has done more to discredit the seedsman and to discourage enthusiasm in garden making than the over drawn descriptions and bald misrepresentations which have figured in so many novelty lists in the past. Foreigners have not been the only offenders, but they have set the pace oftener than otherwise, and American dealers in their eagerness for sensationalism have been an easy mark. It is full time, as Mr. McFarland says, that the seed dealers should unite to discountenance the exploitation of novelties unworthy of the name.

The seed
catalogue as an
educator

Mr. McFarland's argument for direct dollar value in the contents of every page of a catalogue is in line with good practical business advice, but when carried to the extent of eliminating from the catalogue the time-honored department of instruction in garden operations, seed sowing, making and manufacturing hot beds, etc., it will need to be weighed carefully and due consideration given to what may be the ultimate indirect effect of devoting every page of a seed catalogue to the interests of the selling department. The educational value of the typical catalogue of the past has often been extolled and there are many who are now devoting their lives to horticultural pursuits who are wont to attribute their first incentive in the work to the allurements of some old-time seedman's catalogue. It cannot be denied that the cultural instruction in these books disseminated through millions of families has had a very far-reaching effect in the development of horticultural intelligence. Cut it out and what have we to take its place? The answer will, of course, be "The popular garden magazines of the present day." But let us not be too sure of that. Think it over.

Horticulture's
progress

With this issue begins a new volume of HORTICULTURE. A glance over the accompanying index to the contents of Volume V will, we think, convince the reader that HORTICULTURE has provided good equivalent for the trifle which the six-months' subscription has cost. A more careful perusal will impress him with the great variety of topics covered and their uniform high character and permanent value. In accordance with our avowed policy the minimum amount of space has been devoted to matters of transient interest and the pens of earnest progressive-minded men who love horticulture for horticulture's sake and who by their devotion and experience have become skilled in their art, have been freely drawn upon for the best they have been able to contribute. HORTICULTURE has made many new friends and supporters during the progress of Volume V and we will, no doubt, be pardoned even by our scoffing New York contemporary if we indulge in a little jubilation over the fact that our weekly issues show an increase of twelve to fifteen per cent. in number of advertisers and twenty to twenty-five per cent. in advertising space as compared with the corresponding issues of last year. As to the new volume which now opens the outlook justifies the most sanguine assurance. It will "make good."

British Horticulture

A NOTED ORCHARDIST

One of the most interesting collections of orchids near London is to be found in the houses of Mr. J. Gurney Fowler, chairman of the orchid committee of the Royal Horticultural Society. The collection of hybrid cattleyas is extensive and varied, including *Laelio-Cattleya Woodfordiense*, which was raised here. In the East India house there are some excellent vandas and the cypripediums are also very notable, amongst them being one of the finest specimens in England of *Eulophia* and several rare specimens of *E. Petersiana*, and *Bulbophyllum verescens*. The *odontoglossum* house is of a very elaborate character. The double staging is all teak, and there is ventilation for summer use between the two stages. The sides are built with loose bricks, pigeon-hole fashion, to keep the cold air and dry heat from entering the house direct. Every possible contrivance for perfecting ventilation and ensuring the temperature required for the cultivation of cool orchids has been introduced. The collection is of a costly nature, running into thousands of plants. Amongst the varieties are *O. amabile* (Glebeland's variety) for which an award has been received this year, *O. Wilckeanum*, *O. Ossulstonii*, and *O. Eduardii*. There are also many good specimens of *masdevallias*. The gardens have many other attractive features. Here is to be seen the only complete collection of *selaginellas*, for which a gold medal has been awarded by the Royal Horticultural Society.

GARDENERS COMBINE

The report presented at the annual meeting of the British Gardeners' Association recently gives indication of the steady progress being made by this organization during the short time it has been in existence. It has about 1,100 members, a capital of nearly £300, and the first number of the "Journal" of the Association has just appeared. At the meeting several speakers expressed the opinion that there was a reluctance on the part of many gardeners to join the Association which is regrettable whether it proceeds from apathy or from a fear of employer's displeasure. In these days of keen competition no weapon is more powerful than that of co-operation to ensure justice for the individual, but this combination need never imitate the objectionable features of the trades unions, and resort to strikes when matters of dispute arise between employers and the staff. The possibilities of the harm which could be achieved amongst costly horticultural collections if a strike were declared are incalculable. Another interesting feature of the discussion was the proposal to institute some examination whereby the professional experience and ability of a man might be tested, as it was felt that inexperienced men calling themselves gardeners did much harm to the profession, lowering the status and causing considerable loss and annoyance to em-

ployers. Conducted on sound lines, with a proper representation of both the private and commercial sections, the association should have an extremely useful career.

A RHODODENDRON DISPLAY

This week many visitors have admired the brilliant exhibition of rhododendrons made by Messrs. John Waterer and Sons, Ltd., of Bagshot, Surrey, in the Royal Botanic Society's gardens, Regent's Park. One-third of an acre was enclosed under canvas, about 2,000 rhododendrons of various heights being artistically arranged. The varieties represented numbered nearly 300, forming a good selection of the many sterling novelties which the firm have introduced in recent years. Arranged on undulating ground a pleasing effect was produced by the masses of brilliant tints, forming a splendid object lesson of the excellent displays which can be produced by a judicious arrangement of tints. Judging from the interest taken in the show the rhododendron is retaining its great popularity in this country. The demand is also being kept up, Messrs. Waterer supplying customers in all parts of the empire. The firm have lately executed an order for 20,000 plants for shipment to a client near New York, for the fame of Waterer's rhododendrons is well known in the United States. Amongst the varieties shown this week and at the Temple show were the superb Pink Pearl; Strategist, rose pink; Duke of Connaught, Duchess of Connaught, Baroness Henry Schroder, John Waterer, Gomer Waterer, Mrs. Stirling, and others.

Wm. R. Smith.

New Rose Wm. R. Smith

Wm. R. Smith is a cross between Kaiserin Augusta Victoria and Maman Cochet; this rose has every quality necessary for a first rate bedding variety in the open and also has every characteristic of a first-class summer blooming sort for use in the forcing house; it is extremely strong in growth, free in production of canes and foliage and the leafage is so firm and heavy that it resists all the diseases to which the more tender varieties are subject. We have never seen it take either black spot or mildew. The only reason of its failure as a winter forcing variety is the extreme fullness of its bloom which in form closely resembles that of Maman Cochet, being beautifully pointed while in color it is brighter than Golden Gate, being of a deep ivory white overlaid with a good bright shade of pink. We feel absolutely positive that this variety will rank quite up with the Cochets and Kaiserin as a summer bloomer either indoors or out; it originated with Mr. John Shellen of Philadelphia.

E. G. HILL.

NEWS OF THE CLUBS AND SOCIETIES

MASSACHUSETTS HORTICULTURAL SOCIETY.

Another superb exhibition was put up on June 29 and 30 at Horticultural Hall, Boston. Roses and strawberries had the right of way in the prospectus, but peonies, campanulas and other seasonable material almost overwhelmed them. The roses were not equal in quantity or quality to some former exhibitions and in some of the classes there was but one competitor. Prizes were awarded in the various schedule classes to W. J. Clemson, Wm. Whitman, W. A. L. Bazeley, Mrs. J. L. Gardner, E. L. Lewis, Mrs. Frederick Ayer, J. G. Wright and Mrs. E. M. Gill. First prize for three blooms of a variety introduced since 1903 went to W. J. Clemson for Frau Karl Druschki and second to Mrs. H. R. Foote for Mons. Louis Ricard.

The displays of herbaceous peonies were magnificent. Conspicuous among them was George Hollis' display of thirty new varieties, composed of his own seedlings, which was awarded first prize, also a collection of Japanese singles from the same exhibitor. Dr. C. S. Minot, T. C. Thurlow Co., James McKissock, E. L. Lewis, Joseph S. Chase, E. J. Shayler, Mrs. R. Leeson and Blue Hill Nurseries were all represented by large collections. R. & J. Farquhar & Co. made a display of campanulas and peonies in combination which attracted as much admiration as any other feature of the show. Mrs. Gardner also staged campanulas and delphiniums in large numbers, and a splendid effect was produced by a group of large bougainvilleas and orchids from Mrs. Leeson. Blue Hill Nurseries and F. J. Rea sent, as usual, interesting collections of border perennials.

The following special awards were made:

First Class Certificates of Merit: James Cartwright, superior cultivation of *Oncidium splachelatum*; J. E. Rothwell, American seedling *Cypripedium* Emil Johansson; James McKissock, new Peony Rosa Bonheur.

Honorable Mention: J. Lawson, culture of *Crassula coccinea*; Wm. Whitman, display of *Digitalis*; Geo. Hollis, seedling Peony Geo. Hollis; Dr. Charles S. Minot, new Peony M. Charles Levique; F. J. Rea, Iris *orientalis* Snow Queen; E. J. Shayler, seedling Peony No. 2.

In strawberries, G. V. Fletcher, Wilfrid Wheeler, I. E. Coburn, S. H. Warren and John Ward were the main exhibitors. The fruit was of splendid quality, the principal varieties staged being Marshall, McKinley, Sample, Brandywine, Haverland, Minute Man and Abington, the last named variety taking both first and second prizes for one quart of any variety introduced since 1903. In the vegetable section beets, cabbages, carrots, cucumbers, lettuce, peas, onions, etc., were seen in generous array.

ST. LOUIS FLORIST CLUB.

The smoker given by the St. Louis Florist Club on last Saturday night to celebrate its 20th anniversary was a great success and the trustees, Messrs. Smith, Beyer and Weber, are to be congratulated for having arranged such a good time for the members. Seventy-five members, including a few florists who are not members, attended.

There was plenty of everything to eat, drink and smoke for all. At 9 o'clock J. J. Beneke who was chosen chairman of the evening, opened the entertainment with a few well-chosen remarks and called on the band for the opening overture. Then president H. C. Irish, was called upon to welcome the guests. Luther Armstrong followed in response, taking for his subject the first meeting of this club 20 years ago. He was followed by all the ex-presidents in rotation, those present being F. Fillmore, J. W. Kunz, E. W. Guy, C. C. Sanders, J. F. Ammann and J. J. Beneke. After more music and songs James S. Wilson, W. C. Young, John Connor, Frank Weber, H. Lohrenz, S. Kehrmann, W. J. Pilcher and Ed Dearker followed with short talks and the rest of the evening was taken up with singing and stories by Frank Fillmore and others. The party broke up only after the clock had struck one.

Through the courtesy of Secretary Beneke we have been furnished with some valuable data regarding the history of this club which is crowded out this week but which we shall take pleasure in publishing in full in our next issue.

AMERICAN ASSOCIATION OF PARK SUPERINTENDENTS.

The date of the annual meeting to be held at Toronto has been changed to August 15th, 16th and 17th, with headquarters at Queens Hotel. The business meetings will be held in the City Hall.

The following provisional program has been arranged:

August 15th, Morning.—Reception of visitors and address of welcome by the Mayor of Toronto.

August 15th, Afternoon, 2 P. M.—Drive through city parks, etc.

August 15th, Evening.—Business: Reading of papers and discussion thereon.

August 16th, Morning, 9.30 A. M.—Automobile trip.

August 16th, Afternoon.—2 P. M., trip by boat around Toronto Island; 5 P. M., luncheon at Island Park.

August 16th, Evening.—Business meeting.

Arrangements are not fully made for August 17th at this time. Papers and discussions will be features of the business sessions.

F. L. MULFORD, Sec'y-Treas.

WORCESTER COUNTY (MASS.) HORTICULTURAL SOCIETY.

The exhibition held June 27 by the Worcester Horticultural Society was one of great interest, as there was there shown one of the finest displays of peonies ever seen in the hall. Ellwanger & Barry of Rochester, N. Y., staged a table of standard sorts which stood their journey well. The winners of prizes for peonies were Pres. Hadwen, Messrs. Marble, Breed, Fisher and Hixon. There was also a large display of perennial flowers.

The last two exhibitions have been well attended, and although the backward season has prevented the exhibitors from living up to the schedule, the general display has been excellent.

NEW ORLEANS HORTICULTURAL SOCIETY.

The monthly meeting of the New Orleans Horticultural Society was held at Kolb's Halls on June 20th, Mr. Otto Abele presiding; C. R. Banter, secretary; John Eblen, treasurer, at their respective stations.

The committee on chrysanthemum show, through Mr. E. Baker reported progress, stating that at the next meeting a detailed report would be rendered. It was desired to dispense with the annual outing this year owing to the expenses incurred at the convention of Southern florists.

Nominations of officers for the ensuing year were then made: for president, Chas. Eble; vice-presidents, A. Alost, H. Cook, C. Ory; secretary, Chas. R. Panter; treasurer, John Eblen.

Chas. Eble exhibited some fronds of a new variety of *nephrolepis*. A sport from Anna Foster which, from samples, is one of the finest of the *nephrolepis* family. R. Eichling of the U. J. Virgin establishment exhibited some magnificent *Lilium Harrisii* grown from cold storage bulbs.

The next meeting of the society will be held July 18, when the election of officers will take place.

CHAS. R. PANTER, Secretary.

HUNTINGTON HORTICULTURAL SOCIETY.

The annual rose and strawberry exhibition of this society was held on June 27 with about 100 exhibits in flowers and a dozen varieties of strawberries. Walter Jennings, Richard Cartwright gardener, August Heckscher, Adolph Allus gardener, W. J. Matheson, James Kirby gardener, led as prize winners. George Taylor, Edward Gildersleeve gardener, W. W. Sharpe, Peter Mee gardener, John Cartledge, C. Halkan gardener, Miss Cornelia Prime, J. Merrier gardener, shared the honors in strawberries and K. J. Kelley, A. Tighs gardener, Wm. O'Hara, O. E. Schmidt, T. Caley gardener, received awards *prix* for roses. H. T. & A. H. Funnell were first with peonies. Special prizes were awarded to A. Heckscher for palms and Miss Emma Paulding for lilies.

ELBERON HORTICULTURAL SOCIETY.

This society held a rose and strawberry show on June 24 instead of the 17th as previously arranged. Considering the backward season the exhibition was a success. The principal prize winners in the section for cut roses were J. Kennedy, A. Grieb, W. Swain, B. Wychoff, and A. Bauer. In the strawberry section the winners were J. Kennedy, W. Swain, A. Bauer. In the classes for vegetables, H. Wood, A. Grieb, F. Dettlinger and R. Kennedy were the successful exhibitors. W. D. Robertson was first for the best vase of sweet peas.

The society will hold its second annual summer show in the new Casino, Long Branch, on July 24 and 25. There is every indication that the exhibition will be a success.

THE TWENTIETH CENTURY SEED CATALOGUE.

Synopsis of an address delivered before the American Seed Trade Association in New York, June 26, 1907, by J. Horace McFarland.

Old-Time Methods.

No one will dispute my claim that the primary purpose of a Twentieth Century Seed Catalogue is to sell seeds and the accompanying merchandise handled by the seedsman. Yet the time is not yet out of mind for some of us when the selling purpose was not so apparent, and when pictures of the not-for-sale proprietor, or his hardly-for-sale home, or his selling headquarters, took up much space in the catalogues of that day. And when the catalogues of a generation since did get down to seeds, both descriptions and illustrations tended to extravagance, with some notable and honorable exceptions. I well remember the complaint of a well-known illustrator of that time, when he showed me the yet unengraved wood block of a watermelon field which had been returned to him by a customer because there were not enough melons in the field. "I'll plant them so thick he couldn't walk in the field without stepping on them, and that will satisfy him," said the artist. And so he did, and I saw the wonderful result not long after in full catalogue glory! But that was almost a generation ago. Nowadays exaggeration does not prevail so considerably, I am glad to say.

How to Stimulate Sales.

If selling seeds is the object of a seed catalogue, we may properly seek to analyze the methods of approach to make sales through a catalogue. They are at least three in number, and they often mix as freely as does corn when differing varieties are grown in the same field. Sometimes the mixture shows as unpleasantly, too, as when the persistent Black Mexican invades the purity of the Country Gentleman!

A reputation, gained by years of honest dealing and painstaking effort, is a most effective help in or method for selling seeds. Hard to get, it is hard to retain, meaning constant vigilance and expense, and including many disappointments. Yet it is priceless and price-producing, and it is a poor tradesman who does not seek by every means to maintain his reputation for quality of goods sold, and for quality and justice of service rendered. I have been on the hearing side of the seedsman's confessional for more years than I want to mention, and were not my lips as firmly sealed as any priest's, I could tell some startling tales. For there is another side to reputation in seed-selling—the side of a bad reputation, held by the man who sets price above purity, and who thinks of the present dime from his temporary customer more than the prospective dollar of a solid trade.

Another means of selling I may mention as special presentation. This includes extra description and illustration of the seeds to be sold, and is fraught with danger unless pursued with great moderation. To shout in print about every article offered tends to dull the ears of the buyer, or, to speak more accurately, to tire his eyes. We have all seen the flamboyant offers of a certain international so-called "wizard," who described three new

plums on the same page, accurately, he said, with each as "the best ever!"

Low prices and premiums to buyers are other selling inducements which sometimes work to expand business, if not to produce profits. I question the expediency of both, save in special and limited instances. The best Twentieth Century Seed Catalogues rest on a jealously maintained reputation for quality of stock, confine special presentation to articles of special and assured merit, and put prices upon a fair basis of profit relation.

The Contents of the Catalogue.

The contents of a seed catalogue merit consideration. This term is inclusive of the preliminary information, the specialties or novelties, the main collection of seeds, bulbs, and other viable articles, and the accompanying implements, insecticides, etc., which we printers sometimes allude to as "bug stuff."

The proportion of space to be assigned to these various items of contents is important. There should be a basis upon which to consider their value. It may be found by dividing the total cost of the catalogue when actually in the mails by the number of pages, thus getting a price per page. Tried by this truly acid test, there is likely to be a surprising disparity in comparison with results. The necessary space given to essential information, to cultural directions, is found to be expensive, and it may often be curtailed with benefit. One friend who had used full 16 pages out of 32 for cultural directions in his simple catalogue of strawberry plants found that he was doing the educating, while the other fellow was making the sales; wherefore he cut out the encyclopedia features, reduced his catalogue to 16 pages, and profited by the change.

It is safe rule to suggest measuring the preliminary matter, the testimonials, the showing of warehouses and fields and store fronts, by the dollar value. There is some value in them, surely, but not as much as is sometimes claimed.

Circumspection as to Novelties.

Next in attention, frequently, in the Twentieth Century Seed Catalogue come "Novelties" or "Specialties," done on pink paper, with a flourish of trumpets. To throw down a glove against seed novelties in this assemblage may be as hazardous as to take one's best girl across the bull pasture under a red umbrella, so I will only express my gratification at the seeming decline of the once over-spreading novelty department, and wish that the foreign seedsmen, at least, might be compelled to have their floral wonders tested in America five years before daring to offer them to a suffering trade. The dump-heap would grow larger in consequence, I am sure! These novelties, too, need the dollar page test. Do they pay?

There is a growing and commendable tendency to push vegetables or flowers of real merit, or stocks of selected and proved excellence, instead of uncertain and dubious new items. With proper care of the stocks handled, this plan has been known to stand the dollar page test fully.

The Dollar Test.

The so-called "general collection" of seeds tends all the time to include

more and more varieties, spreading out the catalogue, increasing expense, and getting up against the unjust postage wall, without a corresponding advantage in business. The dollar page test, again, is worth applying here. Some years ago a certain organization was storming the seed business along lines of lavish expenditure. On a forty-dollar-a-page cost, against my protest, a whole page illustration of portulacca was used. Of course it didn't pay, and the firm also soon didn't pay, much to the discomfort of those who had not sought financial shelter when they saw the process of exchanging experience for cash proceeding so openly.

The handling of accessories seems to be growing in the seed trade. Implements, insecticides and tools form no inconsiderable part of the twentieth century seed catalogue. Again the dollar test is wise, and it will result in using smaller engravings and cutting off big handles on a hand cultivator, very frequently.

The best modern seed catalogue will be well balanced, beginning without waste of space, offering only novelties and specialties which can be honestly commended or which are frankly presented for trial, giving due space to a sharply reduced general list, and listing such accessories as are worth the space they take, both by reason of merit and selling quality.

Sizes of Catalogue.

The maker of fine books speaks of the size and shape of a book as its "format." The "format" of a catalogue is a matter of importance, and is connected with considerations not particularly bothering the book-maker. The catalogue man has to deal with illustrations and with postage, the government practically controlling him through its ancient, unjust and arbitrary postage scheme.

Of standard sizes for seed catalogues there are three, and these serve as types only, being widely varied from in practice. The 6x9 size is time-honored, but used more by nurserymen than by seedsmen. Indeed, I know of but one prominent dispenser of seeds who holds to it. Allowing reasonable margins, the 6x9 page, with 54 square inches of paper surface, carries 36 square inches of actual type or printing surface. Thus the proportion of the white paper actually used is 66 per cent. The main difficulty with this smaller size is its relative wastefulness of room in the placing of the average illustrations.

To have a truly economical 6x9 catalogue "make-up," every engraving should be made to fit either the width of the type page (from 4 1-2 to 4 3-4 inches), or half that width, though variations can be made up to a point of width which will allow not less than 1 1-4 inches of clear space for type to the right or the left. Even with much care, inevitable wastes occur in adapting illustrations, headings and lists of prices to this size, wherefore it is easy to see why it has been generally discarded. It is a tribute to Mr. Burpee's notable skill as a catalogue maker that he can produce so excellent a result in this size against all its handicaps.

The size generally mentioned as 7x10, but trimming in commercial practice to 6 7-8 x 10, as cut from stock papers, is the second standard size, and it is largely used by seedsmen. With 69

square inches of paper to the page there are 49 square inches of type surface, allowing good margins. The proportion of type surface to white paper is thus 71 per cent., and this size is thus 5 per cent. more economical than the smaller size upon that basis alone.

But the working of engravings, descriptions and headings on the 7x10 page is not only easier but better from the standpoint of effective display. With a type width of 5 1-2 inches on the normal page, the opportunity for large engravings appears, while the arrangement of the wording can be managed to a much better result. Engravings of varying sizes can be worked into this page without undue waste of space, and as I shall show later by example, the 7x10 size is a very successful one.

The postage consideration, under the present governmental handicap on catalogues, fits the 7x10 size fairly well. By using paper of very light weight—too light for the best results, but not as flimsy and futile as the miserable stuff offered in the trade as "Bible" paper—and by sacrificing margins somewhat, 32 pages, cover, order sheet, return envelope and outside envelope can be mailed for one cent. For two cents there can be mailed 64 pages and all the trimmings, with paper a trifle heavier and margins not so scanty.

An advantage of this 7x10 size not to be overlooked is its lower relative printing cost for both covers and interiors, as compared with larger sizes. Obviously the color preparation of 140 square inches of cover will cost less than 160 square inches, while the economy of printing the inside in 32-page forms instead of 16-page forms is even more apparent.

The third standard size approximates 8x10 inches, and this size is used by many of the leaders in the seed trade. Not only does it give the utmost facility in the arrangement of illustrations, in the division of matter into various column widths and in the arrangement of prices, but it also lends itself to a more striking and symmetrical arrangement. Taking the size which may be trimmed from standard 32x44 paper as a basis, each page of this form contains 79 square inches of paper, of which 63 square inches is occupied by type surface. Thus in this the third standard form, the proportion of type surface to paper area is 78 per cent. This is 7 per cent. beyond the relatively economical 7x10 standard and 12 per cent. beyond the uneconomical 6x9 standard. The actual advantage is much greater, because of the facility for the handling of illustrations given by the larger size. In this approximate 8x10 size the catalogue if not too heavy may be folded lengthwise, when it becomes easy to handle and travels through the mails without damage. It is not practicable to thus fold when the catalogue exceeds 48 pages and cover.

The Question of Postage.

Few seedsmen carrying a general assortment and doing a trade of considerable volume can get along with a catalogue under the three cent postage limit. The 8x10 size permits the mailing of 80 pages, cover, order sheet, return envelope and outside envelope or wrapper within Uncle Sam's six-ounce pinch.

Properly handled, 80 pages gives a fair opportunity for satisfactory de-

scriptions on a complete line, with good illustrations and reasonable space for novelties.

I have several times mentioned with some acerbity the postage limit. I venture to interject at this time my feeling of the injustice under which all the catalogue trade suffers by reason of the discrimination shown against it in the governmental postage arrangements. Take the case, for instance, of a 32-page 7x10 catalogue mailing for one cent, or 8 cents per pound. At the last moment before issue the seedsmen is made aware of a change in prices or of a new thing of meritorious character, which makes it essential for him to insert a small slip in this catalogue, previously calculated to just pass the two-ounce limit. This slip, if inserted, doubles the postage, and thus the defenseless seedsmen is compelled to pay just a trifle less than 16 cents a pound to mail his catalogue. If instead of being a catalogue man he is engaged in the business of printing a newspaper or periodical, he could add with impunity and mail in bulk, without affixing stamps, at one cent a pound. Where the justice in this matter comes in it may be possible for the post office authorities to show, but they have never yet done it. A united, insistent demand, expressed not only by resolutions of such a body as this, but by continual, direct and personal protest to the Congressmen reachable through each member of such an association as this, for justice and equity in governmental transactions with the important interests using catalogues, would break down, I believe, eventually, the crass and sometimes insolent inertia and stupidity of the congressional postal conditions. There should be a vigorous and insistent agitation for a pound rate for catalogues, even if the rate is not lowered. The government has no right to maintain an antiquated system which imposes a penalty upon business enterprise. I believe personally that the rate should be lower, but even if it was fixed at 8 cents per pound and the tradesman was permitted to mail in bulk in the same manner that the "yellowest" newspaper or the filthiest magazine mails every day, a great step in advance would be scored. I sincerely hope that the seedsmen will not rest easy under the prevailing injustice, which causes them to take it out of the printer and the paper maker when they should be pounding at the heads of their obdurate and inattentive congressmen.

About Catalogue Illustrations.

In considering the case of a Twentieth Century Seed Catalogue, we must take into account all the forms of illustration, a subject in itself sufficient for several such presentations

RUSTIC WORK

Settees -	\$7.00

as I am endeavoring to make. The catalogues we all remember as prevailing ten to twenty years ago were illustrated primarily by wood cuts, engraved principally by one imaginative illustrator in America or obtained from the more accurate foreign sources. The day of these has passed, and the more attractive halftone, photographically produced, either from a drawing or from a photograph, now prevails. The people who get the catalogues have been wonderfully cultivated in estimation of beauty by the vast flood of magazines poured upon the country each month, and they can no longer be said to be indifferent to exaggerated, inappropriate, ugly or misleading illustrations. The present tendency is wholesome and honest, and the most successful seedmen use the fairest and most beautiful illustrations.

Passing hurriedly over this problem of illustrations, I may only urge a reasonable consistency. It is a matter of common remark that a good halftone on a page "kills" the old-fashioned wood cut which jostles it. No one knows better than myself after many years of endeavor, the difficulty of getting photographic illustrations of all the articles listed in a great seed catalogue. If the seedsmen were wise enough to maintain their own capable trained photographers, operating in their own trial grounds and inspecting their own crops, this difficulty would be diminished. I firmly believe that the truly representative twentieth century catalogue will come to be illustrated from photographs prepared either by or under the direct control of the seedsmen from sources he has within reach.

The wood cut having dropped out of sight, the line engraving, a somewhat cheaper form resulting only from hand-made drawings, is yet used, but in a diminishing ratio. If the drawings are well made, consistent line engravings are satisfactory and commendable.

The Problem of the White Space.

I must not neglect to call attention to the importance of the arrangement

ZIRNCIEBEL'S GIANT PANSIES

Fresh Crop

Now Ready

Famed for a quarter of a century and when you buy them you get the best in existence. I am continuing the pansy business on exactly the same standard as carried on by my father, the late DENYS ZIRNCIEBEL. None genuine unless sold by me.

AUGUSTUS ZIRNCIEBEL, Needham, Mass.

GIANT MARKET. "The Variety for the Million." Trade packet, 2000 seeds, \$1.00.

GIANT FANCY. The NE PLUS ULTRA in Pansies. Trade packet, 1000 seeds, \$1.00.

of the white space on a catalogue page, if the page is to appeal agreeably to the customer and draw his admiration and attention. Too often this is utterly neglected, the fault being mainly with the printer, who is not sufficiently educated in the higher portion of his arduous pursuit to realize that his most difficult problem is the handling of the white space on any piece of printed matter.

By the white space I mean not only the space between words, but between lines, about headings, around engravings, as well as the margins of the catalogue pages themselves. There should be an agreeable harmony in the white space. This is obtainable not only through the interest and skill of the printer, but through the co-operation of the catalogue maker, who adapts his engravings to their uses and who insists on harmonious relation of type, headings, black letter for emphasis and margins. Frequently the catalogue man himself does not realize why a certain page looks agreeable, and I am quite sure that the customer does not understand why one page is attractive and another is not. More than 99 percent of the time the difference, given certain reasonable efficiency in the matter of illustration and type display, is in the handling of the white space.

(To be continued)

ALL GIANTS are used in mixing our **PANSY SEED**

"BODDINGTON'S CHALLENGE" mixture contains all the finest *Giant* strains—of the leading Pansy Specialists in the world—the *Giant* self colors, the *Giant* striped and margined, and the *Giant* blotched—all carefully mixed in proportion—the *finest* that money can buy—the *finest* your money can buy. PERSONAL.

John Risch, of Weiland & Risch, Chicago, starts on June 6 for Paris.

Bernard J. Connolly of Taunton, Mass., sailed for Ireland on June 15, to visit his parents.

S. Groot of Sluis & Groot of Enkhuizen, Holland, who has just finished a business trip to the United States, sailed on the New Amsterdam on July 3 for Rotterdam.

Cyrus Locke, gardener for Henry Cabot Lodge, Nahant, Mass., has entered upon his 49th consecutive year of service in that capacity for his present employer's family.

A. Leuthy of Reslindale, Mass., sails on July 11 to Havre on the La Provence. He expects to be absent only about five weeks. We understand that Thomas Roland of Nahant will sail with him.

Baron Louis Ambrozy de Seden, attache of the Austro-Hungarian Embassy, visited the Arnold Arboretum to note the trees and shrubs best adapted to his country. He was on his way to his summer home at Bar Harbor, Me.

Park Superintendent Pettigrew of Boston and foreman Sander of the Arnold Arboretum are both sick in the hospital. Mr. Pettigrew is recovering nicely from an operation but it will be several weeks before he can leave the hospital.

MOVEMENTS OF GARDENERS.

John Harris has been engaged as head gardener to Mr. D. F. Bush, Glen Cove, N. Y.

Martin Hylands has taken a position as gardener with Mr. Brooks Adams of Quincy, Mass.

Robert Purshall, lately gardener for Mrs. O. H. P. Belmont, has been appointed gardener on the Phelps estate at Hempstead, Long Island.

THE CONGRESSIONAL FREE SEED DISTRIBUTION.

(Paper read before the American Seed Trade Association by Alexander Forbes.)

(Continued from page 13.)

The Truckers and Market Gardeners are also opposed to the Congressional Free Seed Distribution, as will be shown by the following:

"The South Texas Fruit and Truck Growers' Association, consisting of affiliated local associations throughout South Texas and the Gulf coast country, the total membership of which is over 1,300, passed unanimously the following resolutions during their regular meeting at Edna, November 13 and 14, 1906:

Whereas, The free garden seed received from members of Congress at the expense of the General Government are usually of varieties known to be unsuited to the soil and climate of South Texas, and hence are worthless to us; and

Whereas, These seeds are sent to us by our Representatives in Congress under the mistaken idea that a favor is being conferred, which mistaken idea we hereby wish to correct; and

Whereas, The expense to the General Government of obtaining seed and distributing them is a considerable item, and a serious economic waste wholly unjustified by the results obtained; and

Whereas, The amount of money spent annually for seed distribution if apportioned among the United States experiment stations, would be a thousand times more beneficial to each of us than as now spent, for it would enable more investigators to work on horticultural problems the solution of which would be of lasting value to every vegetable grower and to the whole state; therefore be it

Resolved, That we, the South Texas Fruit and Truck Growers' Association, thank our Representatives in Congress for their past favors in the way of free seeds, but assure them that these favors were mistaken kindness on their part; that we condemn the practice of free distribution of garden seeds as an economic waste wholly unjustifiable; that in the future we will not accept from the Government free garden seeds; that we urge our Representatives, as a favor which we will heartily appreciate, to vote against the bill appropriating funds for the distributing of free garden seeds, and to use their influence to have the amount thus saved appropriated to the experiment stations of the country, whose valuable work is indorsed by all right-thinking men.

Resolved Further, That a copy of these resolutions be sent each Congressional Representative from South Texas and to the press of the State with a request for its publication.

W. H. TRAVIS,

Palacios, President.

S. A. McHENRY,

Santa Maria, Vice President.

C. A. WALTON,

Victoria, Secretary-Treasurer.

The Agricultural Experiment Stations in every State are decidedly opposed to the distribution and the Department of Agriculture itself is now arrayed against it. Even as far back as 1903, Secretary Wilson wrote with regard to the securing and distributing of miscellaneous garden seeds:

"With regard to the securing and distributing of miscellaneous garden and flower seed, the fact remains that this work does not accomplish the ends for which the law was originally framed. There are collected, put up, and distributed now, on Congressional orders nearly 40,000,000 packets of miscellaneous vegetable and flower seeds each year. These seeds are the best that can be obtained in the market, but from the fact that large numbers of packets are wasted, the seeds obtained can be of standard sorts only, such as are to be found everywhere for sale in the open market. As there is no practical object to be accomplished by distributing this kind of seed, it is very desirable that some change be made. To this end, it would seem wise to limit our work entirely to the securing and distributing of seeds, plants, etc., of new and rare sorts."

And later, by the Secretary's letter to the Hon. J. A. Tawney, dated

March 15, 1906, from which the following is an extract:

"In my former letter I commented on the value of this miscellaneous distribution of garden and flower seeds, calling attention to the fact that it was difficult to state what such value might be. I also emphasized the fact that in my judgment the money thus expended could be put to better use."

If further proof were needed that the Department of Agriculture was in favor of a change in the distribution, it can be found in Dr. Galloway's testimony before the House Committee on Agriculture, dated December 17, 1906. This testimony was prefaced by the remark that Dr. Galloway would present the Department's view and represent the Secretary in this matter. His view, therefore, may be considered the views of the Department.

"If Congress, in its judgment, believes the time has come to make a change, the Department stands ready to indicate in what manner this change can be made and in what way the funds now appropriated might be used for the upbuilding of plant industries. I am here to present this plan and to invite your suggestions and criticisms upon any points regarding it. The plan that we want to suggest has for its object

First, The abandonment of the miscellaneous distribution of ordinary seeds.

Second, The securing, through all the sources at the command of the Department, of valuable new seeds, plants, bulbs, etc., which are being developed at home and which are known only locally, and the distribution and testing of these new things in regions where it is believed they may have value.

Third, The securing from abroad of new seeds, plants, etc., for introduction into this country, and the upbuilding of agricultural industries as a result of this work."

He then went on to enumerate the number of projects which the Department had worked out, some of which were described to the Committee, seventy-five in all, including such subjects as the extension of Arabian alfalfa in the southwest, extension of alfalfa-growing into states where not now a staple crop, distribution of new varieties of cotton, the improvement of cowpeas, introduction and testing of alkali-resistant crops, sugar-beet seed growing, bulb growing in the United States, etc., etc.

It will therefore be seen that the seedsmen are not the only body who oppose the Congressional Free Seed Distribution. As has been shown, we have also the Farmers, the Market Gardeners and Truckers, the Agricultural Experiment Stations, the Agricultural Press, and last, but not least, the Department of Agriculture. All these are opposed to the present manner of distribution. Who, then, is in favor of it? Congress, and Congress alone! Why does Congress want this distribution of seeds conducted on these lines? The reasons, in my opinion, are purely political. It enables the Congressmen to come in touch annually with their rural or suburban constituents. It enables Congress to shake hands, so to speak, with their farmer friends, and there is no doubt some of their constituents feel "tickled" that their Congressmen remember them in this way once a year, and small as it may appear, this same free seed distribution is considered by the average Congressman, especially from the rural districts, a valuable political asset. He is therefore anxious to remember as many of his constituents as he can, by sending them this petty package of common

garden seeds. If the distribution was confined to new, rare and valuable varieties, that were worth something, each Congressman would probably have to be content with sending 1,000 packages annually, whereas, by the present plan, he can send out, under his own frank, 12,500 packages of five packets each, or 62,500 packets in all, and so hungry are some Congressmen for these seeds that they exchange their documents with fellow members from the Cities, for their seed quotas. Hon. Chas. R. Davis of Minnesota acknowledged to the Agricultural Committee of the House that he bought 15,000 to 25,000 packages over and above his quota, that he bought them for cash at reduced figures, some from the Department and some from agents around the corridors, who claim that they have gotten them from certain members who did not need them and who have them for sale. (Proof of this can be found on Page 5 of the pamphlet on the distribution of seeds, at the hearing before the Agricultural Committee of the House, Dec. 12, 1906.) The following table, prepared by the Department on Agriculture, will also show how systematically this thing is done:

Congressional Distribution of Vegetables and Flower Seeds 1905-6.

(1) Number of Congressmen who distributed more than 20,000 packages of seed	59
(2) Number who distributed more than their regular quotas (12,500 packages) but less than 20,000 packages	157
(3) Number who distributed not exceeding, approximately, their regular quotas, but more than 5,000 packages	246
(4) Number who distributed less than 5,000 packages but more than 1,000 packages	13
(5) Number who distributed less than 1,000 packages	3
Total	478

There is at the Capitol a regular clearing house, so to speak, for handling members' quotas. Can it be wondered at, that it is a hard matter to root out or change this Congressional Free Seed Distribution, it is so dear to the heart of some Congressmen that it seems to them a part and parcel of their very existence to keep this distribution intact as it is now? It is my belief that if this distribution was confined to new and rare varieties, as it should be and as the original Act provides, the majority of Congressmen would have no interest in it. There is no use in denying the fact that what Congress wants is not what is new, rare and valuable in connection with the free seed distribution, but the greatest quantity of the most ordinary kinds, that can be bought for the least amount of money.

PUBLICATIONS RECEIVED.

The National Chrysanthemum Society of England has just issued its schedule of prizes for the year 1907. There will be three regular exhibitions at the Crystal Palace, the first on October 2 and 3, the second on November 6, 7 and 8 and the third on December 4 and 5. There will be a market show at Covent Garden on December 11. Full schedules of prizes are given in this publication, also lists of members, rules and regulations and a lot of other pertinent information.

During Recess.

NEW YORK FLORISTS' CLUB.

The annual meeting of the New York Florists' Club on Tuesday, July 2, at Witzel's Point Grove, was a magnificent success, financially, socially and otherwise. Over three hundred and fifty members, wives and children participated, and the various features under the direction of Messrs. Sheridan, Young, Traendly and Weathered were put through without a hitch or mishap. The weather was perfect, and the trip by boat was most enjoyable; good music, abundant refreshments and everything else to make everybody happy, including a host of babies, were provided with generous liberality. The games were, as usual, entered into with great zest. There were fifty lady bowlers, Mrs. John Donaldson winning the first prize. Louis Schmutz with a family party of thirteen led the list of big delegations. Further details next week.

MONTREAL PERSONAL AND TRADE NOTES.

Hall & Robinson announce that they are going to grow carnations more extensively and will put up a new house 25x50.

J. Bennett, wholesale grower, will only repair expensively some old houses. If the time permits him, he has in prospect a trip to England.

Geo. Robinson is inquiring who of the trade here will attend the convention in London next August; it is hoped to see Montreal well represented.

Mrs. J. McKenna & Son are putting up a new propagating house. They will very soon open a new store at Bennett's Theatre on St. Catherine street.

The picnic of the Montreal Gardeners' and Florists' Club announced for the 17th of July, is postponed, very likely until the 24th. It will take place at Highgate Springs.

Business must be prospering in Montreal, if we judge by the many firms intending to build. C. Gratton, formerly foreman of C. Campbell, bought materials of the old establishment at Rockfield and will rebuild at St. Laurent, where he intends to grow mostly cut flowers. C. A. Smith, gardener to Mr. Daweb of Lachine, will build a new house 25x100 upon his property and grow general stock.

The body of John Donnelly, a gardener, was found in New York harbor on Wednesday morning, June 26.

The Square Deal and Its Result

Our business having outgrown the old quarters at 52 W. 28th Street, we have removed to a larger and better store where, with greatly improved facilities for receiving, displaying and disposing of goods, we are now prepared to serve old and new customers and handle advantageously the product of additional growers. Call and have a talk about it.

FLOWER MARKET REPORTS

BOSTON Business has suddenly fallen down to the lowest ebb of summer dullness, and for the next few weeks there will be little to report otherwise. Receipts continue heavy on all lines and the question of price has no weight, the customer buying in thousand lots having his own way and making the price just about as he pleases. Carnations are on the downward course as to quality. Bride and Bridesmaid roses are also tending the same way with plenty of mildew in evidence. Kaiserin, Carnot, Liberty and Richmond are the leaders in quality at present. Sweet peas are badly congested, and so are peonies. The season has been a bad one for the grower of peonies, Jacqueminot roses and other June specialties, as these things did not bloom until after the regular demand for them had ceased.

The first part of the **BUFFALO** week beginning June 24 and up to Friday last was a busy one for the trade. Commencements, weddings, etc., were in full swing and there was plenty of stock. In fact on Friday and Saturday an over-supply was again had. Carnations were well in demand, but the quality was poor. Roses were also in heavy supply. Peonies played an important part, but with no demand and prices ruling low. The opening market Monday, July 1st, was slow, stock pouring in to overflowing and everything simply at a standstill.

The warm weather is **COLUMBUS** with us and as a result business has begun to drop off and from now on dullness more or less marked will be the rule. But everyone is satisfied, for with all it has been a splendid money-making year. As the time for the annual club picnic draws near, every indication points to a great outing July 17th at Buckeye Lake.

DETROIT There really was something doing last week. The wholesalers claim that they have carnations to burn, but the blamed stuff does not burn, therefore they must pay out of their hard-earned commission to have the dead carted away from the battlefield! All the schools have closed and all the June brides have entered into their bliss or doom—whichever it might be—and the florist goes fishing! Peonies are forging themselves ahead quite a bit and they are the most prominent flowers in local florists' windows.

INDIANAPOLIS The flower business is undergoing its usual transition into summer dullness and demands in every line are exceedingly light. The market is over loaded with stock of all kinds and prices have a downward tendency. The peony season just ended has not been a profitable one. Roses and carnations are plentiful and depreciating in quality and price. Stocks, sweet peas, snap dragon, lily of the valley, and gladioli are in good supply with little or no demand. All the prominent greenhouse men report the largest plant and bedding trade in years, considerable work of that kind being done as late as July 1. The hot weather is now here and early closing is the rule. Palm and foliage beds and bay trees are more in evidence this season than ever before.

NEW YORK Profound stillness prevails in all departments of the florist trade, wholesale or retail. The condition at present existing is an annual occurrence, but comes in with unusual suddenness this year. Local demand has reached its lowest level and outside calls have not yet materialized. The question of vacations and early closing is uppermost on all sides, and the picnic or "outing" of the Florists' Club on July 2 has monopolized most of the interest in the haunts of the progressive wholesaler with his satellites

and retainers. The prize winners are still telling how they did it.

There is a slight **PHILADELPHIA** improvement in market conditions here this week, caused chiefly by the shortening up of supplies, but the volume of business is very limited. The best sellers in roses are Beauty, Liberty and Kaiserin. Carnations and sweet peas are much too plentiful and prices rule low. Cattleyas and Easter lilies are in limited supply, but enough for the call. Lily of the valley is quite draggy. Gardenias are in lessened supply, with demand weak, but prices have stiffened a little; smilax scarce; peony flood has abated. Altogether, the tone is much improved. At last report there was no market at all; this week it is about normal.

AND STILL THEY COME.

June 26, 1907.
HORTICULTURE Publishing Co.

Mr. Wm. J. Stewart, Editor:

Dear Sir: Allow me to congratulate you upon the accuracy of your market reports. "Comparisons, of course, are odious" but I must say that the reports in HORTICULTURE in my opinion (at least as far as this market is concerned and that is the only one in which I am conversant with the conditions) more nearly hit the nail on the head and size up the market better than any of your contemporaries. At least that is the belief of

Yours sincerely,

C. M. A.

CATALOGUES RECEIVED.

BUSINESS CHANGES.

The New York Cut Flower Co. is the name of a new flower store at 1729 Fifth Ave., Pittsburgh, Pa., of which Mr. Marshall is the proprietor.

B. B. Carpenter has purchased the greenhouses of J. G. Harris of Pittsburgh, Pa., and will conduct them in addition to his present business.

The firm of Cunningham & Scott, Grand Rapids, Mich., was dissolved on July 1. Mr. Cunningham assumes all assets and liabilities and will continue the business.

The firm of Canger & Gormley, Chicago, has been dissolved. Mr. Canger will continue in business at 27 State St., and Mr. Gormley will return to the Fleischman Floral Co.

The firm of Dailedouze Brothers, Flatbush, Brooklyn, N. Y., was dissolved on July 1 by mutual consent. Paul and Henry have retired and Eugene will carry on the business under the same firm name.

The firm of H. A. Stevens & Co., Dedham, Mass., has dissolved by mutual consent of the partners. H. A. Stevens retires and the business will be conducted by a new firm composed of James Wheeler and John Flood. Mr. Stevens will go into business in Dedham as a carnation grower, under his own name, and will erect a modern house this summer on land recently acquired.

Welch Bros. have opened a new entrance to the basement floor of their wholesale establishment in Boston, and Paul Rajsik will occupy a portion of the basement as a manufactory of wire designs.

MISCELLANEOUS WANTS

I want second-hand Greenhouse glass. Price must be low. H. Taylor, Box 132, Quincy, Mass.

AMERICAN PEONY SOCIETY.

The fourth annual meeting of the American Peony Society took place on June 27 and 28 in the new buildings of the New York State College of Agriculture at Cornell University, Ithaca. The old officers were re-elected, and directors chosen as follows: E. A. Reeves of Cleveland, O., for one year; J. F. Rosenfeld, West Point, Nebr., two years; G. T. Thurlow, West Newbury, Mass., three years. Ten new members were elected, making a membership of 52. The treasurer reported \$500 in the treasury. Two new committees were appointed, one on new varieties, one on diseases. Arrangements were made for the nomenclature committee to publish a registry of new varieties.

L. H. Bailey delivered the address of welcome. J. Eliot Coit read a valuable paper on the history and present status of the peony. The officers of the society are: President, C. W. Ward, Queens, N. Y.; vice-president, Wm. A. Peterson, Chicago; secretary, A. H. Fewkes, Newton Highlands, Mass.; treasurer, J. H. Humphreys, Germantown, Pa. Further details of the meeting are crowded out this week.

CLUB AND SOCIETY NOTES.

The rose show of the Victoria Horticultural Society, Victoria, B. C., was held on June 28.

July 21 has been selected as the date for holding the picnic of the Chicago Florists' Club, and Morton Grove the place.

The annual picnic of the Rock River Horticultural Society was held on June 27 at the home of Albion Seavey, Palmyra, Ill.

The peony and rose show of the Hampden County Amateur Horticultural Society of Springfield, Mass., was held on June 27 and 28. E. J. Shaylor of Wellesley Hills showed over 50 varieties of peonies; J. W. Adams & Co., peonies and hardy flowers; L. D. Robinson, pansies; E. M. Hedges, peonies; and there were fine exhibits by a large number of amateurs.

The Bulletins of the American Association of Park Superintendents are now being offered for sale to interested persons for twenty-five cents per copy. Four numbers have already been issued. These contain summaries of experiences of leading superintendents, on various topics of live interest to those interested in ornamental work. For copies, address, F. L. Mulford, Sec'y-Treas., 75 N. 16th Street, Harrisburg, Pa.

INCORPORATED.

L. H. Smith Nursery Co., Council Bluffs, Ia.; L. H. Smith, M. H. Riley; capital stock, \$10,000.

The Henry Field Seed Co., Shenandoah, Iowa; president, Henry Field; vice-president, Chas. Simpson; secretary and treasurer, H. E. Eaton; capital stock, \$75,000.

DETROIT OBSERVATIONS.

Robert Klagge, always dangerous when he does get started, is putting up two new Atlas boilers 8x17 with consequent extensive alterations to his boiler room. He has torn down two of his old houses and will replace them with new ones. At present he contributes to the Detroit market most liberally from an elegant crop of Kaiserin roses. Somehow they always reach the wholesaler when most scarce. Talk about practical liberality? Robert is it.

Our parks are this year looking better than ever and the public is fully aware of it. Palmer park, that great gift of our never to be forgotten Senator Thos. Palmer has been adorned with a beautiful and practical shelter. The entrance from Woodward Avenue has been adorned with hardy shrubs. The dust question of our boulevards has been settled by a special sprinkling medium. A very highly appreciated feature of Belle Isle park is the placing of 150 large square flower boxes along its main avenues. Over 30,000 plants were used to fill these boxes and the sight is simply beautiful.

This was the second year of overhauling of our parks. Old shrubs have been taken out and replaced by newer and better varieties. The benefit of such works is two fold; first the parks themselves are improved and secondly the layman's scope of knowledge and desire for plants to adorn his home garden with is widened.

I doubt whether Detroit would boast of these things were it not in the fortunate possession of a park commissioner who belongs to the only craft from whence they all should come, namely, the florist craft.

A UNIFORM BILL OF LADING.

A binding agreement between shippers and the railroads, a dream of American commerce, in the form of a uniform bill of lading, practically has been agreed upon. Representatives of commercial interests and all the trunk lines of the country have settled upon the form of the new bill and the Interstate Commerce Commission has concurred. It will be submitted for the ratification of the railroad and commercial interests of the country early in July.

The effect of the ratification will be to make the new bill of lading a part of the interstate commerce law. The shippers then will have the thing for which they have clamored for the last decade—a railroad receipt binding on the carriers.—Chicago Press Despatch.

On August 7, the first issue of a new paper, devoted to market gardening will make its appearance. The title will be The Market Growers' Journal and it will be published weekly at Louisville, Ky., by a corporation of which C. F. Wood of Wood, Stubbs & Co., is to be president and in which a number of other gentlemen influential in the produce and fruit trade are interested. We wish them abundant success.

OBITUARY.

James Murray.

After an illness of two months' duration James Murray passed away at his residence in Newport, R. I., on June 29. Mr. Murray was born about sixty-three years ago near Kilmarnock, Scotland, and came to this country twenty-six years ago, entering the employment of the late Mr. Buchanan at Astoria, L. I., and going next to the estate of J. Hull Browning at Tenafly, N. J. Later he took a position as gardener for Henry Clews at Newport, where he remained until illness last April compelled his retirement. Mr. Murray was held in high esteem by all who knew him. He was a gardener of extensive experience gained in early and middle life. He is survived by a widow, two sons and a daughter.

Other Deaths.

Prof. David A. Durward, assistant in the agricultural department at the Mt. Hermon School for Boys, East Northfield, Mass., was drowned on July 2 by the upsetting of his canoe. Prof. Durward was 25 years old, a graduate of Cornell Agricultural School, class of 1906. His home is in Claremont, N. H.

A. Relyea of the firm of Relyea & Son, Poughkeepsie, N. Y., was struck and instantly killed by a switch engine near the Central New England station. He was about 60 years of age. A widow and son survive him.

John Halliday of Lynchburg, Va., was killed by a train on the Southern Railway on the evening of June 26. He was an uncle of the Halliday Brothers of Baltimore. He leaves two daughters.

NEWS NOTES.

The Harman Greenhouses at Iola, Kan., have been bought by J. W. Primmer.

Albert Batley of Maynard, Mass., is installing two large boilers for heating his houses.

A petition in bankruptcy has been filed against the Albaugh Nursery & Orchard Co., Phoneton, O.

The greenhouses being erected by Frank & Sons near Portland, Ind., were damaged by the wind storm on June 23.

J. H. Cleary formally opened his new store in New Bedford, Mass., on June 26. An orchestra was in attendance and carnations for the ladies and cigars for the gentlemen were dispensed.

The Lakeside Floral Co. have begun work on a business block at Calumet, Mich., which will have a frontage of 58 feet. A conservatory will be located on the south side. They are also doubling the capacity of their plant at Chassell.

Andrew T. White of Brooklyn, N. Y., has offered to give \$50,000 if the city will raise \$250,000 more and maintain an arboretum. A bill to help the project has been passed at Albany and the directors of the Brooklyn Institute of Art and Sciences have asked Comptroller Metz to have the Arboretum located on the ground back of the Institute.

HITCHINGS AND CO.

The Hitchings Corrugated Fire Box Boiler is an everlasting friend to many growers, and it has made records hard to beat. But there are cases where a Sectional Boiler fits the need better, for instance: where greenhouse additions are contemplated and another section or more to the boiler would then take care of the extra work. However we can fit you out either way, with the Old Standby Corrugated or our New Friend the Sectional. Send for that boiler catalog.

ABOUT THE BOILER

MR. W. W. CASTLE.

Leominster, Mass., April 5, 1907.

Dear Sir:—The Boiler and Circulator installed by you last Fall has given entire satisfaction. I have saved at least twelve tons of coal, and have given Mr. Congdon an order this day for one of the largest Boilers you make to be put in at the Stone property on Nelson St., Leominster. It is the best Boiler I ever had.

Yours respectfully,

(Signed) J. FULLER.

No boiler ever built for greenhouse heating can compare in good results with our
STEEL PLATE HOT WATER BOILER

ABOUT THE CIRCULATOR

COL. W. W. CASTLE, Boston, Mass.

Needham, Mass., June 24, 1907.

Dear Sir:—The Circulator installed for me last fall has given me entire satisfaction and works well. With the quick circulation received from its use there certainly is a saving of fuel, and if a person with a system not piped so as to get a good circulation was to try the Circulator before laying out too much expense on alteration of piping, I believe they would receive the benefit required.

Cordially yours,

(Signed) PAUL E. RICHWAGEN.

Perfect Circulation in all degrees of weather absolutely assured by the use of our
ELECTRIC CIRCULATOR

PIPING AND FITTING DONE AND SATISFACTION GUARANTEED.

W. W. CASTLE, Heating Engineer, 170 Summer St., Boston.

The Standard Steam Trap

Certificate of merit awarded at Washington, D. C., Florists' Convention. For simplicity, durability and perfect satisfaction it has them all guessing. It is in a class by itself. To see it work a large plant as well as a small will convince the most sceptical that it is the Florists' Friend.

The Standard Ventilating Machine still leads as the most durable, easiest working and the all-around satisfactory machine.

The Duplex Gutter is gaining all the time, over 12,000 feet sold thus far this season. Catalogues free.

Whatever you decide about Boilers, don't be talked into thinking that one immense boiler is cheaper to operate than three or four of an economical size.

That is, if you connect them up "Burnham way" in battery. Just listen a minute and see if our argument isn't good sense: With one immense boiler you have to run all that boiler all the time, in all weathers. In the early fall and spring, when only a little fire is wanted, it's bound to be an unwieldy, coal-eating proposition.

Now, suppose you had two or three "Burnhams" in battery: then you could run exactly as much grate surface as needed.

Some days only one boiler could do the work and the fire in one of the others be banked or out altogether. With the "Burnham way" you have the whole situation under perfect and economical control. We would like very much to give you some proven out facts on battery work. Write us.

LORD & BURNHAM CO.

GREENHOUSE DESIGNERS AND MANUFACTURERS

**1133 BROADWAY, cor. 26th Street, N. Y.
BOSTON Branch: 819 Tremont Building
PHILADELPHIA Branch: 1255 Filbert St.**

IF you have been wondering in your mind the way we take care of the gutter when side ventilation is

needed, as in graperies, then this section will settle it. You see the gutter is placed above the sash, not detracting from the effect of the curved eave or casting the shade it would if placed at the eaves. Both side and ridge operating wheels are secured to the same column, adding to your convenience. It is not alone these minor details that we would most forcibly dwell upon, but the unmatched lightness of the construction and the fact that it makes a house as near like outdoors as possible and still be indoors. Send for the catalog.

Pierson U-Bar Company, Designers and Builders U-Bar Greenhouses, Metropolitan Building, 4th Avenue and Twenty-third Street, New York.

This Section shows an Inside Border with Cement Bottom and Drainage Point. The Slat Walks allow the Air and Sun to Reach the Soil.

German Iris

THEIR CULTURE

This very late cool season has a number of advantages, and perhaps not the least of these is the length of the flowering period of hardy herbaceous perennials. The German irises have been in bloom more or less for two weeks, and at this writing are just coming into full beauty, those in bloom two weeks ago still making a pretty showing.

Those who intend planting a bed of "Hardy Orchids" should make their preparations now if possible, and have planting all done by the end of this month. Have a foot of good rich loam in a fairly dry position, making sure that no superfluous water will stand on the plants during winter months. It is very important that the roots are planted straight down; rather shorten the roots than turn the ends up, and—most important of all—do not plant too deep; the rhizomes must be out of the ground to insure profuse blooming. If you will look at any *Iris Germanica* clumps that have been planted some time you will find more than half of each rhizome out of the ground.

SOME STANDARD KINDS

It is almost impossible to describe in detail the different species to which the large number of varieties belong; in fact we are getting very much mixed in tracing varieties to their respective origins. It is of the standard kinds that the following descriptions are given.

The beautiful Florentine Iris or orris root is the first to bloom, soon followed by its mate *spectabilis*, the former with large white flowers delicately tinted lavender, the latter deep velvety purple flowers of large size. *Pallida Mandraliscae* comes next with standard and falls of a deep rich purple. The following usually come into bloom in rapid succession.

Pallida dalmatica. The best of the light lavender, with spikes well above foliage, flowers light clear lavender, drooping petals tinted rose.

H. Cramer. Standard and falls pale lavender, falls somewhat darker, a very free bloomer.

Asiatica. Very large flower deep rich purple, falls velvety.

Aurea. Clear bright yellow.

Victorine. One of the most striking. Standard pure white slightly blotched purple, falls rich velvety purple.

Mme. Neubronnes. Golden yellow, the finest of this color yet introduced.

Gypsy Queen. The best of the smoky varieties. Standard cloudy coppery yellow, falls deep rich velvety maroon.

Trautlieb. Clear delicate pink, the prettiest of this shade.

Inezenza. Pure white.

Mme. Paquette. Large flower, deep purple lilac, falls darker.

Gracchus. Standards clear light yellow, falls crimson veined white, a striking variety.

Flavescens. Clear delicate pale yellow.

Her Majesty. A very handsome distinctive variety with light rosy purple standards and dark red purple falls.

Queen of May. A delicate soft lilac pink, very effective and showy.

Mme. Chereau. An old variety, but still one of the

leaders; pure white frilled and margined light lavender.

Honorabilis. Deep golden yellow, with bronze falls.

Mrs. H. Darwin. One of the best whites and a very free bloomer, falls veined purple.

Frederic J. Rea.

Paeony Notes from Stonycroft Gardens

The first *Paeony Sinensis* to bloom was *Sarah Bernhardt* (Dessert). This paeony was found by Dessert in his grandfather's collection unnamed, and was named by him in 1895. It is a medium grower, free bloomer and is certainly four days earlier than anything else here. The flowers could have all been cut and out of the way before all others.

The next were *Duchess de Neumours* (Guerin) and *Whitleyi*. These came practically together, four to five days after *Sarah Bernhardt*. Then came *Mme. de Verneville*, the queen of all early bloomers. This variety has a very delicate and chaste bloom. Medium grower, profuse bloomer, and is an all round valuable variety.

Then follows the bulk of the midseason's blooms, with *Festiva Maxima* only a day or so in advance. This variety is an old standby for general admiration. It is tall and strong, but the flower is harsh and coarse in a mass. I know it is very generally admired, but it is inferior to *Festiva*, which is one of the delicate and charming flowers. For home use, *Festiva* is far superior to *Festiva Maxima*. I have no doubt that many admirers of the large robust *Maxima* will frown at my statement, but if you do, I ask you to grow them both, side by side, before you talk too strong.

One of the very best of white varieties to follow after the above, is *Avalanche*. It is an excellent all round variety. Then follows *Baroness Schroeder*, an excellent and charming late white. I am not sure but this is the best medium late white in existence. With this comes *Mirelle* and *Marie*, two excellent tall growing cream whites. These are not quite so late as the ivory-white *Marie Lemoine* (Calot), but they are worthy a place in any collection.

The fine golden yellow of *Courronne d'Or* is nearly equalled by *Mons. Dupont*. *Emilie Hoste*, the paeony sent us from Holland as of their own growing, is none other than this French variety *Mons. Dupont* renamed. The Holland growers would better let that business alone. They can at best only imitate a prominent English firm, and the better they imitate them the greater their failure in the end.

The newer French varieties such as: *Aurore*, *Mme. de Treyeran*, *Germain Bigot*, *Rosa Bonheur*, *Therese*, *M. Martin Cahuzac* and others lately introduced, are at the top of all delicate colors. These varieties are yet scarce, but they are worth the price, and any one buying them will have the lively satisfaction when they bloom of knowing that the mass of paeonies cannot touch them.

Preparing for the convention

Are you planning to go to Philadelphia next month? The intervening time is short and preparations made with deliberation well in advance go far to assure the pleasure such a trip should afford.

Consult your State vice-president about railroad rates and give him early information of your intentions so that he may know something of the number to be provided for; write to the hotel committee for accommoda-

tions; confer with your friends and try to induce them to go with you. They'll not regret going; no one ever does. One vice-president, Mr. Young of Missouri, has special rates all settled, list of the party and other details well in hand; how many others can say the same? Yet nothing goes further to insure a big and successful meeting than a line of hustling vice-presidents each taking pride in heading a delegation which in size and dignity will represent his State in a creditable manner.

Own your home

The older florists' and gardeners' clubs are now coming to quite a respectable age. As we occasionally read of one attaining its majority the thought comes to us that with the exercise of a little more self-reliance and far-seeing business judgment many of these organizations might today have something more substantial than a record of usefulness from year to year and a balance of a few hundred dollars in the hands of the treasurer; might, in fact, be in possession of a remunerative property appreciating in value as time passes and furnishing a permanent home with all the advantages, material and social, which such an asset always carries with it. Located, as the florists' associations are, almost invariably within the limits of some enterprising city, the selection of a corner lot on the line of future real estate advancement and the securing of the funds necessary to erect a building thereon should be a simple matter. That every club and society has within its ranks men well qualified to manage such a property in its interest and willing to assume such responsibility goes without saying and there seems no good reason why the financial history of the Massachusetts Horticultural Society showing the accumulation of a million dollars within a period of seventy-five years, largely through wise real estate investments, might not be paralleled in the case of many other organizations of like character.

Reclothing the "hogbacks"

Mr. Oberlin's paper on the "hogbacks" of Pennsylvania, which appears elsewhere in this issue presents a very vivid picture of what these barren spots must be. The author makes no attempt to account for the existence of these refractory excrescences but we may infer from some of his remarks that he regards them as natural features of the ground. It is more than likely, however, that these, as well as the depressed areas surrounding them were once covered with good soil supporting forest growth and that their present condition is only the inevitable result of erosion by fire and flood after the stripping of the forest growth. Our original settlers gave no thought to the ultimate effects of forest clearing and that we of today are not much better is painfully in evidence when we contemplate the processes which are making of our rugged mountains and hills gigantic hogbacks on which our descendants will spend much fruitless labor in the endeavor to restore a fertility which can only come after ages of slow repairing through Nature's means. It is certainly a most laudable aim to turn these places to the production of plants and flowers of commercial value but we have always supposed that Pennsylvania offered an abundance of fertile land for such purposes and if the Berks county "hogbacks" are to be started off for any permanent condition of verdure we think that something quite different from peas and hydrangeas will have to be resorted to. In this connection we would advise a perusal of Gifford Pinchot's two little volumes on Practical Forestry, published by the Department of Agriculture, to anyone interested in the reclothing of such naked spots.

AFTER ADJOURNMENT.

The American Florist tells its readers that *Pteris tremula* is a good substitute for *Cibotium Schiedei*, a quick grower and cheap, and stands the rough usage of store or decorations well. We'll agree that it is "a quick grower and cheap"—very cheap—but it is not for a moment in the same class with *Cibotium Schiedei*.

Who in the world has a happier existence than the typical Rhinebeck violet grower? Makes enough from a small house or two in winter to build another house in summer, and the rest of the time he can devote to ball games and other social diversions. A bunch of these gentlemen attended the boat races on the Hudson recently, got arrested by the patrol for crossing the course, were set ashore at Hyde Park and their boat was confiscated until after the races. Thus do misfortunes steal in upon the course when we are all unsuspecting. Nevertheless, the Rhinebeck violet is still king.

The Journal of Horticulture (London) tells us that the dahlia was introduced by Dr. Dahl with the idea that the tubers would prove a pleasant substitute for the potato and that the acrid tubers of the dahlia are said to be still eaten by the unhappy wine-growers in the south of France, adding that this "perhaps contributes towards their present dyspeptic views of the universe." But are "dyspeptic views of the universe" confined exclusively to French wine-growers? And do the French growers drink the same brand of wine which one gets at the French Table d' Hotes in New York? Cannot the Dahlia Society take up the defence of its protegee?

Will some one of our botanical sharps kindly tell us the difference between *Kochia scorparia* and *Kochia trichophylla*. We are familiar with *K. scorparia* but when we see the foreign growers offering *K. trichophylla* we want light. They tell us that *K. scorparia* is called the Mexican Fire Plant although said to be not a native of Mexico or this continent. Why is that?

THE NEW PRESIDENT OF THE AMERICAN SEED TRADE ASSOCIATION.

See Frontispiece.

It was our pleasure to meet president-elect George S. Green for the first time at the memorable seed trade convention in New York city and it did not take long to realize that the Association had found in this quiet, earnest, kindly gentleman a president who will fill the position with dignity and credit. Mr. Green has been president of the Illinois Seed Company of Chicago since 1901, previous to which time he had been interested in the seed business in St. Louis, Chicago and Colorado Springs, his first association with the trade having been with D. I. Bushnell & Co., at St. Louis, from 1881 until 1893. Mr. Green is a native of Hannibal, Mo.

NEPHROLEPIS AMERPOHLII.

PERSONAL.

R. E. Akehurst of White Marsh, Md., and Miss E. Beall were married on June 26.

Miss Esther Heacock, daughter of Joseph Heacock of Wyncote, Pa., sailed June 29 on a European trip.

William Hewitt, gardener for A. C. Lincoln, Brookline, Mass., has gone to Scotland on a two months' vacation.

J. B. Heiss and wife of Dayton, Ohio, sailed from New York on July 9 via S. S. Kaiser Wilhelm II. for a trip through Germany, Austria, France, Belgium and Holland.

M. Herman Merkel, forester of the Bronx Park Zoological Garden, New York, is spending a few days looking over the shrub collections at the Arnold Arboretum under escort of Jackson Dawson.

Arthur Smith, formerly of Westbury, L. I., has a thoughtfully-prepared and very interesting paper on Plant Consciousness in the Arena for June. Mr. Smith sailed from Boston on the Saxonia, on July 9, for a short visit to his home in England.

Harry A. Bunyard was in Boston last Sunday for a few hours for the purpose of taking back with him to New York Mr. Boddington's employee, August Loeber, who, after his long illness, is at last able to leave the hospital and hopes to resume work within a few weeks.

Conspicuous in the group photograph of the Association of Oldest Inhabitants, taken at their meeting at Alton Farm, Md., on July 4, is the towering figure of America's most honored gardener, William R. Smith.

Mr. Smith who is one of the vice-presidents of this unique association presided at this meeting and also had charge of the planting of two Maine pine trees which was one of the interesting events of the occasion. Dr. Wm. M. Starr, who participated has entered his 100th year.

SAN FRANCISCO PERSONAL AND NEWS NOTES.

H. Bateman, who opened one of the handsomest flower stores early this year, has had to discontinue business for the time being.

Rossi Bros. have rented Bonneau's greenhouses. They intend growing roses, carnations and adiantum for their extensive shipping business.

P. Ferrari, manager of Ferrari Bros., has been making a trip to Southern California.

R. Groves, of the Park Floral Co., has just returned from a trip East, where he visited all the large cities.

The Pacific Coast Horticultural Society and the California State Floral Society have decided not to hold a fall flower show, owing to the unsettled conditions in San Francisco. But they intend holding a complimentary dahlia show sometime in September.

The gypsy moths have almost devastated the Lynn Woods (Mass.), this season and have appeared in the streets of Lynn in such numbers as to necessitate the sanding of the car tracks on account of the slipperiness caused by the crushed caterpillars.

Complaints are being made that the spraying of arsenate of lead on the trees and grass of Essex and Middlesex counties, Mass., for the destruction of the gypsy moth is causing the death of many valuable cattle by poisoning.

NEWS OF THE CLUBS AND SOCIETIES

AMERICAN PEONY SOCIETY.

The meeting of the American Peony Society at Ithaca, N. Y., June 27-28, was a most successful one and was attended by more members and those interested in the peony than ever before.

The first session of the meeting was held on Thursday afternoon, Dean Bailey being present to welcome the visitors to Cornell. He gave an interesting address, explaining the work of the College of Agriculture and its connection with the University. Owing to the unusual amount of business brought before the meeting it was found necessary to adjourn to Friday forenoon and again to Friday afternoon. Prof. Craig presented the checklist as the report of the nomenclature committee, and Prof. Coit, his able assistant, presented an extract from his thesis which proved to be a very interesting history of the peony and a statement of the methods pursued in the present work of bringing order out of the much confused condition in which the peony has been submerged.

On Thursday afternoon carriages were provided by Prof. Craig and a visit was made to the trial grounds which are situated about one and a quarter miles away from the University. The collection covers about two and one-half acres of ground and contains all the varieties obtainable in this country and Europe. The plants have made a fairly strong growth, but have not arrived at perfection yet, which will require at least another year. An additional collection is now proposed which will be made up of plants selected by the donors as their choice of the best varieties, with the idea of eventually selecting from these one hundred varieties which shall be the cream.

Two new standing committees were appointed; one on the diseases of the peony, and the other on new varieties. They are made up as follows: Committee on diseases, Prof. H. H. Whetzel, A. H. Fewkes, W. C. Barry, W. A. Peterson, A. O. Wild and C. S. Harrison; committee on new varieties, A. H. Fewkes, S. G. Harris and C. J. Hunn. Three new names were added to the committee on nomenclature, making that committee as it now stands, Prof. John Craig, Prof. A. P. Saunders, C. J. Maloy, John A. Charlton, J. F. Rosenfield, A. H. Fewkes, B. H. Farr, and Jos. Dauphin. It was voted to return to Ithaca in 1908 as the test collection will be in better condition, and probably will be a great attraction for several years to come.

A very pleasant incident was the visit paid by the members and their friends under the guidance of Prof. Craig, to the University Library, where some of the old volumes were examined, in which much of the early history of the peony was found by Prof. Coit. Old herbals of almost priceless value were brought out and shown to the visitors—books which were written before the time of Linnaeus, presenting the most superb typography and hand colored plates as bright and clear as though recently painted.

The Society feels deeply indebted to the management of the college, and particularly to Prof. John Craig and his assistants, for the great interest

taken in our work and the courtesy and kindness extended to all who attended the meeting.

A. H. FEWKES, Sec.

HUNTINGTON HORTICULTURAL AND AGRICULTURAL SOCIETY.

The annual June exhibition of the Huntington Horticultural and Agricultural Society was held in the Trade School Building on June 27. Roses and strawberries were the feature of the show, and in these classes the display exceeded former exhibits, the roses being notably of fine quality and in large variety. Peonies and other herbaceous flowers were also fine.

Principal awards were:

Strawberries—August Heckscher, Adolph Alms, gardener, 1st in classes, for size, finish, shipping and collection; Mrs. W. W. Sharpe, Peter Mee, gardener, 1st for flavor. Roses—12 pink, Walter Jennings, Richard Cartwright, gardener. 12 white, August Heckscher. 12 red, Wm. O'Hara. 12 any other, A. Heckscher. 6 sprays moss, white, Walter Jennings; pink, O. E. Schmidt. Thos. Caley, gardener. 6 sprays climbi. g. Wm. O'Hara. Collection, Walter Jennings. 1st; Wm. O'Hara, 2nd. Vase hardy flowers, August Heckscher. Collection hardy flowers, W. J. Matheson, James Kirby, gardener. Sweet Peas, W. J. Matheson. Carnations, A. Heckscher. Peonies, H. J. & A. H. Funnell. Early vegetables, W. Jennings, 1st; A. Heckscher, 2nd. The rooms were handsomely decorated with palms from A. Heckscher's conservatory.

The season here is fully ten days later than the average.

A. H. FUNNELL, Secretary.

NEW JERSEY FLORICULTURAL SOCIETY.

The floral display at the meeting of this society in Orange, on July 5, was unusually rich. There were many rare and beautiful orchids from Lager & Hurrell, Jos. A. Manda, O. A. Miller, and others; gloxinias from Peter Duff; hardy herbaceous flowers from Wm. Reid, Max Schneider and A. T. Caparn. The latter showed Romneya Coulteri, which had been raised in frames in light soil and had taken 18 months in which to reach the blooming stage.

In the business portion of the evening Henry Hornacker made a plea for the representation of the commercial man in the forthcoming fall show by a special class with suitable reward. The temper of the meeting was to grant this, and \$6 and \$9 for the best twenty-five cut blooms, open to the trade, was ordered to be placed upon the schedule.

NEW LONDON COUNTY HORTICULTURAL SOCIETY.

On July 2 the annual show of this society opened with a display fully equal to that of any previous year. Among the exhibits were roses and carnations by S. J. Reuter of Westerville; Boston ferns by A. K. Anderson, of the M. F. Plant estate; hydrangeas, gladioli and conifers by Otto Ernst; palms from the Geduldig estate; Hamburg grapes and cucumbers by J. P. Sorenson. Awards were made to Gustave Neumann, gardener for Mrs. Alfred Mitchell, for iris, herbaceous flowers, peonies and strawberries; and T. W. Head secured a round dozen of prizes on vegetables.

ST. LOUIS FLORIST CLUB.

The St. Louis Florist Club recently celebrated its 20th anniversary with a smoker, as related in last week's issue of HORTICULTURE. The following statistics of the organization have been kindly furnished by Secretary J. J. Beneke.

The St. Louis Florist Club was organized June 28, 1887, in the rooms of the Mercantile Club, there were present at the first meeting, the following florists: J. M. Jordan, S. Kehrman, L. Armstrong, J. S. Wilson, Wm. Ellison, Chas. Cannon, Chas. A. Juengel, E. W. Guy, R. Frow, H. Michel, Alex. Waldbart, Wm. Schray, and Julius Koenig, Sr. Of these five are dead, J. M. Jordan, Chas. Cannon, H. Michel, Wm. Schray and Julius Koenig, Sr.; four are still members of the Club; they are: J. S. Wilson, Chas. Juengel, E. W. Guy, and Messrs. Frow, Kehrman, Armstrong, Ellison and Waldbart are still among the living but not members at present.

The first officers were: J. M. Jordan, president; H. Michel, vice president; L. Armstrong, secretary; and A. Waldbart, treasurer. Messrs. Kehrman, Cannon and Juengel, trustees. The Club continued to meet in the rooms of the Mercantile Club until May 13, 1890, with a membership of 17, afterwards in the Odd Fellows' building.

In 1888 Charles Cannon was elected president, the secretary, vice-president, and treasurer holding over, the club now having increased its membership to 23.

In August, 1889, H. Michel was elected president; William Schray, vice-president; S. Kehrman, secretary; the treasurer holding over.

April 8th, 1890, H. Michel resigned as president, and J. M. Jordan was elected to fill out the vacancy.

August, 1890, Charles Cannon was again elected president, the other officers holding over.

August, 1891, Eugene H. Michel was elected president; Julius Koenig, Sr., vice-president; Emil Schray, secretary, and Alexander Waldbart, treasurer.

In 1892 John Young was elected president; R. F. Tesson, vice-president; the secretary and treasurer holding over.

The following year, 1893, Alex. Waldbart served as president; Julius Koenig, Sr., vice-president; F. C. Weber, treasurer, and Schray, secretary. The trustees were: Beneke, Jordan, Michel.

The following year Alex. Waldbart was re-elected as president; Frank J. Fillmore, vice-president; Emil Schray, secretary, and John Young, treasurer, and the membership had now increased to 35.

In 1895 Frank J. Fillmore was elected to fill the chair with C. A. Kuehn as vice-president, the other officers holding over.

The following year, 1896, John W. Kunz was elected president; Frank J. Fillmore, vice-president, secretary and treasurer the same as last year, the membership having now increased to 40.

The following year Dr. A. S. Halsted served as president, with F. W. Ude, Jr., vice-president, secretary and treasurer holding over.

In 1898 C. C. Sanders was elected president; Max. Herzog, vice-president; E. Schray, secretary, and J. J. Beneke, treasurer.

The following year, 1899, J. F. Ammann served as president; C. A. Kuehn, vice-president; secretary and treasurer the same.

E. W. Guy occupied the chair in 1900, with Charles Juengel as vice-president; E. Schray, secretary, and J. J. Beneke, treasurer.

In 1901 Fred H. Meinhardt was elected to presidency, with F. M. Ellis as vice-president, secretary and treasurer holding over, the club now having a membership of 50.

In August, 1902, J. W. Dunford was elected president; George B. Windler, vice-president, officers of secretary and treasurer holding over.

August, 1903, J. J. Beneke was elected president; William Winter, vice-president; E. Schray, secretary, and Otto G. Koenig, treasurer; this year the membership was increased to 100.

In August, 1904, Chas. A. Juengel was elected president, with W. J. Pilcher, vice-president; F. H. Meinhardt, treasurer, and E. Schray, secretary.

The following year, 1905, J. F. Ammann served his second term as president; John Steidel, vice-president, and E. Schray serv-

ing his fifteenth year as secretary, with F. H. Meinhardt, treasurer. New trustees were: Carl Beyer, Frank Weber and F. J. Fillmore; under the new by-laws, Mr. Beyer is to serve three years; Frank Weber, two, and Fillmore, one.

In August, 1906, the present officers were elected, H. C. Irish, president; John Connon, vice-president, and J. J. Beneke, secretary; A. G. Benzen, treasurer, with Wm. C. Smith as a three year trustee; the membership of the club at the present time is 101.

The club in its twenty years of existence has had seventeen presidents, seven treasurers and four secretaries, and has entertained two S. A. F. conventions, the first in 1893, and the other during World's Fair year, 1904.

J. M. Jordan, the club's first president, served the S. A. F. as its president in 1890, when the convention was held in Boston, Mass.

Prof. William Trelase served the S. A. F. as vice-president in 1893, and J. J. Beneke in 1904.

The club at the present time is in the most prosperous condition, with all of its members working in perfect harmony. Meetings have never been so well attended as at the present time. Its meetings are held on every second Thursday afternoon at 2 o'clock. The annual election will take place Aug. 11th, when a new set of officers will be elected to serve the ensuing year.

NEW BEDFORD HORTICULTURAL SOCIETY.

At the regular monthly meeting of the New Bedford Horticultural Society last Monday evening, although the rose show had been abandoned owing to the lateness of the season and other circumstances, the rose formed the main feature in the exhibition of plants and flowers. James Garthly of Fairhaven had a collection of over 100 fine roses, composed mainly of Frau Karl Druschki, Baroness Rothschild, Paul Neyron, and Cleo. M. Garthly also showed a vase of Baby Rambler. Other exhibits were a fine vase of delphiniums by A. J. Jahn and a small vase of annual wall flowers by T. White. The latter was of interest, as the seed from which the flowers were grown was sown last March.

There is a possibility of the date of the fall exhibition of the New Bedford Horticultural Society being changed. Schedules have been printed and all arrangements made for an exhibition upon Sept. 12, 13, and 14.

Overtures having been made by the executive committee of the Old Home Week celebration regarding the holding of a horticultural exhibition during that week, a special meeting of the Horticultural Society was held on June 27, when a committee was appointed to obtain estimates of the cost of holding a free exhibition in the city hall. If the Old Home Week committee will grant a sufficient sum from its funds to cover expenses, including the offering of prizes as inducements for growers to exhibit their goods, the society will hold the exhibition.

The city hall was gutted by fire last November, but the Old Home Week committee are anxious to use the shell of it during the celebrations, and they realize that no organization would be able to cover the scars so neatly and put the old building into such happy service as the Horticultural Society could.

At its next meeting the society will probably decide whether it will change the date of the fall exhibition to the last week in August, or retain it as at present arranged and hold the exhibition during Old Home Week as an additional enterprise.

THOMAS WHITE.

FLORIST CLUB OF PHILADELPHIA.

The feature of the regular monthly meeting of this club held on the 2nd inst. was the animated discussion on the convention entertainment program. A further meeting of the executive committee will be held on the 11th inst., and a special meeting of the club will take place on the 16th inst. to hear their report and take final action. Thos. J. Oberlin read an interesting paper on flower culture in the waste spots of the upper crests of the Berks County hills. While no financial returns to speak of have been realized in this connection, so far the outlook is encouraging, and the improvement in the general aspect is gratifying and fully compensates for the trouble and expense.

At the meeting on August 6 there will be an exhibition of the new Amerpohlil fern for the W. P. Craig prizes: 1st, \$10.00 in gold; 2d, \$7.50; 3d, \$5.00. The contest is on invitation of Mr. Craig who distributed three plants each of the new fern among nine local growers last spring for trial. The winner of first prize will be allowed to retain his choice of his three plants. The judges will be Ed. Lonsdale, W. H. Taplin and Robt. Kift. There will be a special entertainment of songs, music and refreshments.

PITTSBURG AND ALLEGHENY FLORISTS' AND GARDENERS' CLUB.

The meeting of this club July 2d was mainly to make arrangements for the annual July picnic, and for the S. A. F. convention at Philadelphia.

The picnic committee was appointed as follows: E. J. McCallum, W. H. Carney, G. W. Marshall, Edw. Blind, Julius Ludwig. E. C. Reineman was appointed a committee of one to arrange transportation for those members desiring to go in a body in special cars to Philadelphia. It was decided not to hold a club meeting in August, but at the usual time for notices of the August meeting, the secretary will write the members advising of no meeting and to communicate with Mr. Reineman in regard to transportation in a body to Philadelphia.

The Phipps Conservatories, Schenley Park, made a display of out door grown stock in variety, being especially strong in roses. The club adjourned to meet again at the July picnic, and at the S. A. F. convention, before the next regular meeting in September.

NEWPORT HORTICULTURAL SOCIETY.

The rose show on the afternoon of July 9 was a splendid success not only roses in all classes but decorative foliated plants, ferns, hardy herbaceous flowers, etc., being contributed in lavish profusion by the gardeners representing the many fine private estates. A certificate of merit was awarded Mrs. Wm. G. Weld for rose Trier. The names of Vanderbilt, Astor, Richardson, Goelet and Belmont figured largely in the list of prize winners.

FLORISTS' CLUB OF WASHINGTON.

The Florists' Club of Washington held its July meeting at Gude's Hall on Tuesday, July 2nd. There was very little business of importance transacted. A few financial matters were adjusted. It was decided that the annual picnic be an afternoon trip to the Great Falls of the Potomac, some time during the third week in July. The florists with their families will have a delightful trolley ride and wind up with dinner at the hotel. The subject of holding a chrysanthemum show here in the fall, which has been held in abeyance some time, was finally decided upon at the meeting. A committee on arrangements, consisting of Geo. Cooke, Geo. Field and F. H. Kramer, was appointed by Pres. Bisset. The show will be held on Tuesday, Wednesday and Thursday of the week of Nov. 15th.

PENNSYLVANIA HORTICULTURAL SOCIETY.

A two days' sweet pea and hardy perennial exhibition was held here this week and brought out some of the best exhibits we have seen in years. Pepper, Elkins, Bodine, Walker, Paul, Morrell, Lippincott, Ellis, and other gardens were represented and had a fairly good showing of prizes to take home and tack up in the packing shed. But more important was the public interest and appreciation of the show which will undoubtedly bear fruit in the future. The first prize in sweet peas was not well arranged. Another set of judges would have thrown it out and given it to a poorer lot of flowers better staged. Half the charm of the sweet pea is lost when its airy, graceful poise is lost sight of. Henry G. Michell, Henry A. Dreer, Samuel T. Bodine, Harrison & Schrieber and C. S. Ridgway donated the prizes. The hardy perennials were excellent and very interesting.

CLUB AND SOCIETY NOTES.

The summer meeting of the Minnesota Horticultural Society was held at Armory Hall, State Experiment Station, St. Anthony Park on Tuesday, July 2.

The American Pomological Society will hold its 31st annual meeting at the Jamestown Exposition on September 24, 25, 26. A large attendance from remote places is expected.

The Sweet Pea Exhibition of the Massachusetts Horticultural Society will be held at Horticultural Hall, Boston, on Saturday and Sunday, July 20 and 21. This is one of the most interesting of the mid-summer shows and will well repay a visit.

The annual picnic of the Chicago Florists' Club will take place on July 21 at Morton Grove. Those who know theingleaders in fun making in the Chicago Club—and who doesn't—need no argument to convince them that there will be a "high old time" on this occasion.

THE REDEMPTION OF THE HOGBACKS.

(Thomas J. Oberlin, Sinking Spring, Pa., before the Florists' Club of Philadelphia, July 2nd, 1907.)

What is a "Hogback"?

Here and there throughout the county of Berks and the adjacent country can be seen bare, uncovered spots, usually at some elevation above the surrounding wooded or verdure-covered surface; in many instances they are inaccessible to the ordinary methods of tillage—where a plow would find it exceedingly difficult to draw a furrow through the hard, sterile or rocky soil, even if it were possible to get there with that implement. These arid, desert-like spots hump themselves up in conspicuous fashion, visible frequently at long distances and mar by their unsightly barrenness what would otherwise form a portion of a beautiful, verdure-covered landscape.

In the South they call such patches hog-backs, and we have borrowed the term and applied it to similar situations in Berks County. Just why our southern friends have called them hog-backs has not been so clearly explained to the writer, unless it is that through the exercise of a lively imagination they observed some similarity in their general contour to the dorsal surface of a Georgia razor-back when his swinishness arises from his slumbers, yawns and elevates his spinal column to a maximum curvature.

The hogbacks of Berks County admit of classification. In the first class we would place those existing in the red shale and yellow gravel districts; in the second, those found in the limestone formation. The former frequently are pictures of desolation, being entirely devoid of vegetation on their crests except perhaps some lichens and mosses, every particle of arable soil having been washed away by the winds and rains of past centuries. The latter are usually more accessible and respond more readily to the hand of the gardener; the sharp lichen-clothed rocks protrude at the apex and also at the sides through the shallow, loose soil, bordered perhaps by thin grass and some depauperate shrubbery, struggles to live wedged in tightly between the rocks.

The Task of Redemption.

The task of redeeming these seemingly useless spots from their native savagery, in which they have lain for centuries since the first pioneers cleared the surrounding land in the fertile valleys and dells and began its cultivation, seems to be a most forbidding and hopeless one. It seems as if it would be necessary to invoke a good fairy to pass her magic wand over these barren places before anything of beauty or value could be brought forth; and yet, it has been the experience of the writer to observe at least a few such spots that have been made productive without rubbing a lamp or resorting to any other Aladdin-like processes.

It also is very strange that nature herself has covered just such spots with suitable flowering plants and left a great many uncovered to be completed by man, but such is really the case. The flowering plants, however, that nature has placed there have no particular value as a cut flower; their mission, it seems, has been to simply

suggest to man what should be planted there either for profit or beauty, as will be shown later on.

The next thought will be, How is this work of redemption to begin? We can say in a general way that if we dig or blast pockets into these barren or rocky places, wide and deep enough to hold a sufficient quantity of good rich soil, and the surface is not too precipitous to be washed away by heavy rains, we can succeed in covering them with shrubbery or low evergreens. This has been successfully done. But when the sides of your hog-back descend very abruptly so that a foothold can scarcely be maintained and the foregoing method fails us, what can be done? And this brings us to the consideration of two specific hog-backs which have been under our observation for a number of years.

A Barren Spot.

A gentleman has a beautiful estate south of Reading, Pa., its surface is very undulating with some steep hills. Near the top of one of these is the mansion, commanding an extensive view of the surrounding country, the Schuylkill River and the city of Reading visible in the distance, the Blue mountains in successive ridges fading away on the hazy horizon. Overhead the banks of clouds speeding across the valley cast their shadows on the surface of the earth as if racing along. It is a charming picture and, to mar it at all, in the center of this beautiful estate there arises a barren red and yellow hog-back in all its dreary nakedness which has defied all efforts to be clothed.

Here, Nature appears to have somewhat reversed the order of things. This hog-back is in the midst of cultivated fields and a beautiful spring which supplies the reservoir on the premises is near the top of a hill with an old Indian trail leading to it when you would naturally expect to find the spring near the bottom of the hill.

This barren spot looked particularly repulsive when you walked along the Indian trail in the direction of the spring and as this was a favorite walk of the owner it was decreed that the hog-back or barren must disappear and if possible have a green covering during the entire year.

Pine and cedar trees had been tried without success. Pockets were dug and evergreen honeysuckles planted, but at that elevation so high and so dry the struggle for existence became each succeeding year more precarious.

Plants Suitable for Desert Conditions.

Finally the owner sent for the writer to help solve the problem. I went, I saw but I did not conquer immediately. I approached it with great caution and some trepidation as you would something uncanny or hoodooed, looked it over rather sadly, covered as it was here and there with the melancholy debris of former failures. The remains of the nurseryman's stock were still there stiff and stark in death like dead men's skulls and the bleaching skeletons of a desert caravan strewn about as a warning to newcomers. Of course, with so much mortality covering the hog-back you could hardly expect me to promise anything except to wander homeward and think it over profoundly and seriously. I tried to think of every flowering plant that grows

on the barren summits of the South Mountain. At last, I thought of *Tephrosia virginiana*, Hoary Pea or Catgut and what a refreshing symposium of color and beauty it was on the dry and barren crests of the mountain! It has a root so long and tough and penetrating it takes all your strength to uproot it. Ah! I thought, if we could stretch some catgut on this man's hog-back, then, there would be some music when the fiddler comes along.

Commercially, you can procure catgut in all the letters of the chromatic scale when the violinist's article is needed but when it comes to the other catgut, *Tephrosia virginiana*, there was none to be found in the market. There was nothing that we could do except to look for an allied plant now under cultivation and supplied by growers of hardy perennials, a plant of another genera and in the same family, the *Leguminosae* or Pulse family. We concluded that *Lathyrus latifolius*, Everlasting Pea, of a pink-purple color, which also has a long and tough root would succeed on the barren. As indicated before it was the tephrosia that suggested the lathyrus but we had never seen the latter grow under such conditions and its trial would be in a great measure experimental. If it succeeded, it would at any rate cover the hog-back during the summer months. We hastened to the owner of the property with our explanation. "If it succeeds, we will also have flowers for cutting," he said. "That is very good; we will try it."

We went right at it in October and planted several hundred. We dug trenches transversely across the back taking great care to place the excavated earth and stones at such places that they would not run away from us, loosened up the bottom of the trench and mixed some ammoniated bone phosphate thoroughly with the soil and laid in the roots at an angle covering them with what loose soil we had and placed stones and rocks on top to keep the soil from rolling. We might call this a stone mulch. We had to wait until the following June for results and the way those perennial peas grew and bloomed on that hog-back was a surprise to everybody. There was such a plethora of flowers that all the blooms could not be used at the house for decorating. This was six years ago and the vines have since grown ranker and denser and when the season of bloom is over a thick mat of dark green foliage covers the barren. This is the story of a hog-back of the first class.

Experimenting With a Limestone Tract.

At present, we are actively engaged in reclaiming one of the second class or in a limestone formation. In recent years there has been no income from this patch, except that the scant growth of grass was grazed by cattle. In this case the strata of limestone have no dip, but project vertically from the surface of the soil. The surface soil, if there is any, is of various degrees of thickness, and the subsoil is a very stiff yellow clay. Between the projecting rocks, there often is sufficient space to drive a hole with a post-bar in which a root can be inserted and the earth gently tamped with a wooden rammer. In these holes and

on the highest parts of the hog-back we have planted three hundred of the new perennial pea, *Lathyrus latifolius*, "Mary Lovett" of a beautiful carmine and shell-pink color, a very desirable florists' flower. In places where the soil is deeper and the rocks do not obstruct, pockets have been dug, the yellow clay removed and filled with sand and scrapings from the street gutters and about a quart of Quaker City poudrette thoroughly mixed with the sand and scrapings. One hundred standard *Hydrangea paniculata grandiflora* and two hundred of the new *Hydrangea arborescens grandiflora alba* have been planted in these larger excavations, which have then been filled with good surface soil, a black loam, brought from another part of the premises and mulched with stable manure kept several inches away from the stems of the shrubs.

To Apply the "Dollar Test."

As it would be impracticable to give this hog-back horse cultivation on account of its peculiar contour, the inaccessibility to many of its parts and its rocky character, we propose to let the Mary Lovetts have their own sweet will and grow riotously among the grass and weeds where the latter cannot be held in check with scythe and sickle. Where regular distances could be maintained, the hydrangeas have been set about six feet apart each way so that the scythe can have a rather free swing to keep down the grass and weeds which will be permitted to remain as a mulch. Many of the projecting rocks have been knocked off with a heavy sledge, so as to bring them on a level with the general surface and not interfere with the mowing. Immediately around the plants we will cultivate by hand with the hoe. As yet we can report no results, but we look forward to as happy a termination of our labors as in the previous case already related. We expect our labors to have their reward, and we will send the products of this hog-back to the Philadelphia markets—not a great quantity this summer, but more in the seasons to come.

My readers must not classify the work done in this instance with the so-called "soft snaps"; there is truthfully nothing very soft-snappy about it. It is a job full of hardwork. To bestride a hog-back in the hot sunshine and ride it successfully to an artistic finish requires courage and perseverance; it is not a ride in an Indian howdah with silken hangings and a shading canopy.

Nature unselfishly gives us many suggestions that are helpful, written on her hills and slopes, if we yield to her dictations and take them and apply them in our work. In the way I have related, many of the hog-backs now lying idle as waste places could be redeemed from their apparent uselessness and be made objects of beauty in the landscape and sources of profit as well.

The firm of Learnard & Shirley, Danvers, Mass., is dissolved. The business will be continued by Shirley & Fowle and the plant will be moved to Ash and Hampshire streets.

You will find something worth reading on every page of HORTICULTURE.

ROYAL HORTICULTURAL SOCIETY.

On Tuesday, June 11, though there was no special feature, the hall was amply filled with plants and flowers, from the humble Alpine saxifrage to the glorious cattleyas and *Odontoglossum crispum*, while in the annex were tables bearing a fine selection of July melons, some placed before the Fruit Committee for certificates by Swanley College, but by far the best and most varied display from Lady Northcliffe, which not only embraced the finest of well-known kinds as Superlative and Sutton's Al, but had a beautifully netted fruit of the Blenheim Orange strain named the Peer. There were also two trays of useful sized cucumbers between Rochford's Market and Bounteous, named Market Rival, and very aptly, for it was in advance of both these standard sorts. The rest of the space was occupied by hardy perennials, iris and lilies sent by the T. S. Ware Co. A mass of the brilliant *Chrysogonum virginicum* was prettily set off by *Ramondea Pyreuea* and its rarer albino variety found only in one spot on the Spanish Alps of the Pyrenees; rising above these were plants of *Campanula spicata* and *Erigeron Philadelphus*.

Low, Sander, Stanley & Co. and McBean, the Sussex champion grower, staged fine *O. crispum* and well-flowered pieces of *Epimedium macranthum* (Marshall's var) and of *Cypripedium bellatulum*. Hobbies staged good plants of leading polyantha roses, Clematis and Rose Soleil d'Or, said to be a yellow H. P., but unmistakably a Persian briar. Veitch & Son had large plants of the Himalayan honeysuckle, *Lonicera Maaki* full of flowers, but it was too far back to know if it had the looked-for fragrance in the genus. Also, a beautiful but tender looking conifer *Libocedrus macrolepis*, like an arboreal selaginella, and the minute but very pretty *Hypericum Chinense*.

Mr. Reuthe, always rich in rare and novel things, put up well-flowered specimens of the deep orange-flowered *Rhododendron cinnabarinum*, *Campanula abiente* and some *Eremurus Himalayicus*, with exceptionally long and massive spikes of flower, and neat little pieces of the pretty *Hypericum polyphyllum*, which he says is always in flower. M. Pritchard had rich Oriental poppies, *Hemerocallis aureolus*, and some good varieties of Iris—particularly yellow forms. These are all gains in their class. Charles Turner put up for the floral committee some large plants of a very promising white carnation, named Lady White; the flowers are large and flat, and do not split but, alas, it is scentless.

H. B. May was awarded a gilt Flora medal for his superb bank of ferns, which contained the best of his grand *Nephrolepis*—such as *exaltatum superbum*, *todeaoides*, *plumosa* *Brusei* and *elegantissima*, all of which have come to stay. There was a flat, filled with flowering plants of a new hybrid *Hippeastrum* Mrs. Carl Jay; parentage doubtful, but evidently a vittata, from the broad white midrib stripe on leaf.

The R. H. S. held their first show of colonial fruit at Vincent Square on the 13th and 14th inst. These exhibitions have a certain interest to English fruit producers, and doubtless more to

those engaged in the work in New England, if I am right in thus collectively naming the States that group around and north of New York, up to the lakes and St. Lawrence river, and where, I opine, is grown the great bulk of the fine apples, and other hard fruit that reaches us in such fine condition at a time when with us it is yet scarce. Since the war, too, it must be a source of congratulation to all that the arts of peace have been to the front, and that the Cape is sending home such fine produce from their orchards, ranging from the lordly pine apple to the humble tomato, that it comes within the reach of the humbler working classes, finding a ready sale in the open market, and from the ubiquitous barrow of the coster.

We are used to seeing the fine pine-apples that are shipped from Madeira, but these sent over the Atlantic packed singly with great care are more to look at than to eat, while the small but delicious "Queens" from Natal have all the ripeness, color and flavor of those we used to produce in specially constructed pine pits, at such an enormous expense, that the culture was only attempted, where money was no object, a state of things that has ceased to be since agricultural depression has crippled the resources of land owners. The rest of the exhibits were almost a replica of the show, which took place last October—apples, pears, oranges, grapes, bananas, with a few sundries of tropical fruits from our Colonies on or near the equator.

Chatting with a well-known market farmer I gathered that the fruit prospects in the suburbs were not very promising. Victoria plums, over the average; Damsons, at present doubtful, having the stoning period yet to get over, when especially on deep soils so many of them run off.

THOMAS BUNYARD.

ALBANY FLORISTS' CLUB.

The Albany Florists' Club met last night in the office of Patrick Hyde. Two new members were initiated, and the reports received indicated that the club is in a prosperous condition. After business was over the members became the guests of Mr. Hyde. They were provided with good things and a social time was enjoyed. There were brief addresses by various members and some songs and recitations. Among those who attended were:

Edward Meaney, Fred Henkes, Fred Goldring, H. C. Whittle, Wm. C. Gloeckner, Henry Bashtel, John Murnane, Edward Tracey, William Kurth, Harry Riggs, John Moran, John McAllister, Fred A. Danker, Patrick Hyde, John A. Howe, Jr., John Haggerty, Henry Long, Harvey Woodland, Fred W. Gloeckner, Arthur S. King, Thomas Snare, Thomas Tracey, H. E. Hurlbut and W. H. Brockway.

EXHIBITION AT WENHAM, MASS.

The ladies will give a floral carnival August 14 and 15, at Wenham, Mass., for the purpose of stimulating an interest in floriculture in Wenham and neighboring towns. The committee in charge feel that from the interest taken by the residents, the affair will be both a financial and educational success. Prizes will be given in all classes for annuals, perennials and vegetables, and there will be many exhibits of specialties.

THE TWENTIETH CENTURY CATALOGUE.

J. Horace McFarland before the American Seed Trade Association.

(Continued from page 11).

Catalogue Covers.

With trepidation I take up the subject of seed catalogue covers and the sometimes accompanying "plates." Much experience has made me shy in relation to having any definite opinions as to the selling power of any particular form of cover. This same experience has convinced me that there is a tendency for better covers; that is, those truer to life and free from the garish characteristics of the German school of lithography. Yet candor compels me to also state that I have seen an apparently beautiful and accurate cover fall down utterly in pulling business, and an extremely plain and simple cover produce satisfactory results.

Covers fall into two general divisions, the first including that type of cover which specifically offers something to sell in addition to announcing the business of the seedsman. The second class includes the plain and decorative covers not making any specific selling offer, but intended to serve merely as the protection implied in the name "cover," or, if sufficiently dignified or decorated, to stop the catalogue on the way to the yawning waste-basket which is the seedsman's Hades.

The "selling" covers have been usually colored, and sometimes gaudily colored; yet a number of extremely satisfactory covers are in monotone. Speaking cautiously and with an attempt to consider the whole country and not the east merely, I feel that a well-considered colored cover made by some one of the processes which gives truthfulness in form as well as in color, is likely to be satisfactory and profitable. That it is hard to devise and secure such covers no man before me needs to be told. That dependence upon the imagination of the lithographer, who secures his stimulating information from the encyclopedia, is a poor way to get a good cover is known to some of you. A study of the field and proper photographs of things that seem to be interesting and feasible, with color notes made at the critical time, will serve as the best possible preparation for success in this line.

Mr. McFarland displayed later in monotone by the lantern some colored covers and some decorative and dignified covers showing that there is a value to the latter form in escaping the waste-basket danger and also in being permitted to mix with the better magazines on the reading tables of well-to-do people.

I think that after all the question of covers simmers down closely to the class of trade sought. If the seed house is of age and dignity, the covers of its catalogues should show that dignity and can bear to advantage some restraint. If the trade sought is that of the farmer, color may and frequently does prove distinctly advantageous. That one of the strongest, oldest and largest American seed houses has within the last two seasons found it pay to drop entirely the glaring forms of lithography for an extremely refined decorative cover on its expensive book, is a significant point which may well be sharply considered.

As to the value of inserts, I can

only say that they bear a distinct relation to the cover, and should be in the same key of treatment. Illustrations sell the goods, and if the insert is properly handled and placed it ought to be efficient, and frequently is.

The Preparation of Copy.

Of importance hardly inferior to the illustrations, which will be treated later, are the descriptions in the catalogue, of what the printer calls the "copy." It would not be difficult for me to show some extremely horrible examples of how "copy" comes to the unfortunate printer, nor to give instances of the way in which the man whose next year's trade is at stake depends on luck and imagination. Most of the leaders, however, have a clear idea as to the preparation of copy. I am glad to see a growing tendency toward reduction of the size of descriptions and the elimination of flamboyant language. The ideal description covers in the briefest possible form every point that needs to be known about any particular vegetable or flower, fairly commending its merits and not omitting to frankly state its demerits. This ideal description has not yet appeared in any catalogue, although there are several approaches to it in current practice.

To reduce the constantly expanding general collections to the fewest number of varieties by continually dropping duplications, and to get these items down to a terse and succinct descriptive form, tends not only toward general economy but toward providing more room for the description of specialties. It seems to me that every seedsman with individuality prefers to stand on a comparatively select list, the stocks to supply which he especially safeguards and the merits of which he fully believes in.

I have before adverted to novelties. They form a fascinating country, of great possibilities and still greater impossibilities, and travel in this mysterious land of horticultural novelties is beset with many trials. Current American practice distinguishes the novelties by separation from the body of the catalogue, by colored paper, by various decorative adornments, by expanded illustrations and yet more expanded descriptions. I can hardly venture to have any concrete ideas as to the value of these differing methods, but I can safely say that the dollar test before alluded to is the best test after one has applied the touch-stone of truth to novelty statements.

The Illustrations.

Of tremendous importance in the catalogue are the illustrations. Properly handled they sell the articles listed. I have a dream of the twentieth century catalogue which will give a picture, even if only of thumb-nail size, of every article offered. That catalogue will have to be sharply condensed in number of items, however, to make such a scheme practicable. Indeed, it may be utterly impracticable.

As I have previously said, the illustrations of a few years ago proceeded largely from only two sources, both of which are now practically abandoned. Photographs are largely used and will be more largely used as the means for making them are adopted by the seedsman. I have expressed myself as to the advisability of the pro-

duction of the photographs by the seedsman himself, or by an organization under his direct control. I know how difficult it will be, for I have painful experience of the expense of getting good "selling" horticultural photographs—an experience extending over the production of a collection now exceeding ten thousand items. Those of you who do the Mount Pleasant Press the credit to call at its premises and see these photographs are never shown the ash-heap or the dun-pile. You see our successes, but not our failures. You are not told of the futile trips; of the rainy days; of the wormy cabbage; of the wilted annuals. You do not learn how our well-laid schemes for getting specimens sufficiently artistic to please us and sufficiently flamboyant to please you fall down. I would have you try the work, because it will be better for you and, frankly, better for me.

Method of Engraving.

An hour might well be spent in discussing the mechanics of photography as applied to seedsman's uses and the methods of making illustrations. We do not have that hour at our disposal, and I therefore pass quickly to the methods of engraving used, now confined practically to but two. Of these, the line cut requires drawing and thus interposes the hand of man. The only reason for using line engravings is to permit printing on cheaper paper, and the tendency is away from them at the present time.

The twentieth century catalogue is illustrated photographically, and the engravings are made by the halftone process, which I wish I might have opportunity to explain to you in detail at some future time. In having the halftones made, however, I would simply point out one pitfall, and that is the square-inch rate offered by the cheapest man, who makes you believe you are getting your engravings cheaper while he gets more money out of you and you get less efficiency out of him. The square-inch man always gets square inches. He makes square-finish cuts and he gives you plenty of margins and white space included within the dainty little lines surrounding his productions. The most of the difficulty experienced by the printer in using halftones is in the printing of these non-essential black spaces or white spaces.

The engraver who will treat your photographic copy according to your needs and constantly aim to reduce the size of your engravings without impairing effectiveness is certainly the cheapest. The use of outlining and of the various other methods for securing effectiveness from half-tones is extremely important. The handling of your photographs so as to avoid either pure white or solid black backgrounds, and making them so that they will fit the designed use of the page, is another point worth considering in the twentieth century catalogue, if we had one whole year of that century in which to bring the details out. I have hinted, however, as to the methods of efficiency, and in some of the concrete criticisms to be made later by aid of the lantern I can go, perhaps, a little further.

Styles and Sizes of Type.

In planning a Twentieth Century Catalogue careful attention must be

given to the type, paper and printing to be used if full selling attractiveness is to result.

Postage considerations are responsible in many ways for making the modern seed catalogue the oculist's friend. No man would willingly read the small type which it is deemed necessary to use if he could get out of it, and I fear that many who receive the catalogues printed in the small type can and do get out of it. If the beneficent government of the United States through its Post Office Department did not place a cash penalty upon plain printing, I feel sure that there would be few seed catalogues printed in anything smaller than 8-point or brevier type, which carries 28 words to the square inch under normal conditions. As it is, far too many of these catalogues are printed in 6-point, known as nonpareil type, which carries 53 words to the square inch, and thus occupies practically but half the space of the more desirable and easily read 8-point type.

There is an intermediate type known as minion, or 7-point, which includes 42 words to the square inch. This in good practice is taken as the happy medium between the small nonpareil and the space-wasting brevier. It takes, independent of the space required by illustrations, 23 per cent more space than that taken by the solid nonpareil, while it is a 50 per cent gain of space on the large 8-point. Unfortunately, many printers do not have this type, and not having studied the intimate relations of type to paper and eye and selling, they are prone to recommend the smaller type because it is more profitable to set. When a more legible condition is required of them, it is given by the insertion of thin strips of metal between the lines, technically known as "leads," which, while opening out the page, do not make legible the excessively small letters. While between leaded nonpareil and solid minion there is practically no difference in the number of words to the square inch, there is a vast difference in favor of the solid minion, or 7-point, in respect to legibility.

Headings.

Careful judgment in regard to headings tends to make a catalogue attractive and satisfactory, both for the seedsman and the customer. Though some of the best catalogues use a great variety of type, it is not to be considered good practice any more than it would be thought good practice for a man to wear as many different characters of buttons on his clothes as he had buttonholes. Uniformity in character of type, emphasis being given by difference in size, leads to the happiest result.

I cannot but favor, where it may be appropriately used, an ornamental heading to a page, which will serve to give it color and character independent of the illustrations, and to distinctly tie it to the individuality of the seedsman. In connection with such a heading and with the various headings and black types used in seed catalogue work, the study of the white spaces is, as I have previously mentioned, of the utmost importance. It is a problem in which the thoughtful printer should work hand in hand with the capable seedsman.

Paper.

The subject of paper for catalogues is one upon which there might be much discussion. The free use of half-tones implies a paper which will give reasonably good results from these modern engravings. Such results can only be secured on a smooth and receptive surface, and the need for such a surface can be understood when you are advised that the depth of relief in the ordinary half-tone engraving is barely one-thousandth of an inch. The peculiar paper known as coated paper, from the fact that its printing surface is given by a coating of finely pulverized white clay brushed on in the process of manufacture, provides the best results. It also increases weight out of proportion to its thickness, and costs more than other papers. Some seed catalogues have been printed altogether on coated paper, and more would be if the government treated us fairly in the matter of postage.

Considering the question impartially, I cannot but feel that the offering of articles of low price, such as ordinary seed quantities, does not justify the increase in cost brought about in the complete use of coated paper in many cases. A good quality of super calendered paper, by which is meant paper which, coming from the machine, is then passed through a set of heated rolls which compress and polish it, is the standard for catalogue work. The postage handicap has made it thinner and thinner, until now, in the form of the mis-called "Bible" paper, it is so thin as to be inefficient, unpleasant and unsatisfactory. The regular super calendered paper is satisfactory where the engravings have been properly prepared and where the printer understands the use of the half-tone engravings in connection with a suitable ink. It should not be lighter in any case than a basis of forty pounds to the ream on a size of 25x38 inches. Even this weight has now been penalized by the paper manufacturers, who have added a higher price because of its thinness and the loss they are compelled to undergo in its manufacture.

The Ink.

Once in a while a seed catalogue comes before me which introduces itself afar by its odor. I am at once made aware that the printer has been listening to the wiles of the competing ink maker, who furnishes for 18 cents a pound an ink which is "just as good" as the 40 cent ink upon which the printer's ideas may have been fixed. Just as no one likes to meet a gentleman who announces his presence by strong scents of any kind, no one cares to meet a catalogue which smells to Heaven, or to the other place! Cheap ink is as poor economy as Bible paper, and both together make a combination which is a long way off from catalogue Heaven!

All too inadequately, because of the limitations of time, I have discussed the general construction of the Twentieth Century Seed Catalogue. I expect to see it more beautiful and more efficient, and possibly more expensive.

Those of us who are familiar with the best catalogue issues of foreign lands must admit that there are yet heights to attain in horticultural salesmanship in America. That we will eventually excel in this as in most of

the undertakings of progressive America, I am sure.

Consider the Poor Printer.

May I say in conclusion just a few words about and for the poor printer, with whom you must deal in regard to catalogue work? With an overturn exceeding half a billion dollars annually in the work he produces, the poor printer has successfully avoided the millionaire class up to date. Indeed, the very best of him collected would have to be bunched in dozens and half dozens to be valued at any such an exalted figure as that which makes the million unit of acquisition in many less important pursuits. Holding the key to all commercial activity, underllying the learning of the world, furnishing an absolute necessity for its progress, he is yet unrewarded by any adequate of commercial profit for his work. Perhaps he is laying up treasures where moth do not corrupt nor rust destroy! This is a very pleasant thing to contemplate, but few of the seedsmen before me would care to do business upon such a basis; for it is not possible to draw checks on the balance in the Sky Bank!

Consider his poor situation, in dealing with the printer when you ask of him new equipment at competitive prices. He is always willing to buy a new press out of last year's profits, if there were any, or out of last year's credit, if he has any, in order to do your catalogue better. He is willing to think for you; to give you without architect's prices, or engineer's fee, or doctor's honorarium, the results of a life of devotion to the art preservative of all arts. Do not ask him too much. Do not press him too hard. Do not squeeze him too tight in the matter of time, delivery, alterations and the other agitations which sometimes make catalogue production a misery. Help the poor printer, and he will help the rich seedsman!

Seed Trade

According to reports brought by the California delegates to the recent Seedmen's Convention, onion seed is not in the desperate way they wished us to believe early in the season. Having spread reports that fully one-third of the crop was destroyed, and that the remainder would produce not over 30 to 50 per cent. of an average, and refusing to quote a pound to any one, they now announce seed for sale to all comers at very moderate prices, and say the damage to the crop reported early in the season was much exaggerated.

There are certain dealers who are always thrown into a panic on a whisper of a short crop, and immediately predict famine prices. These are just the men the artful grower is after. Having scared them into buttoning up tightly or quoting prohibitive prices, he quietly steals around, and naming prices from fifteen to twenty-five per cent. under the dealers, carries off the orders and leaves the dealers with their stock on their hands. It is a shrewd maneuver, albeit as old as man, and those who are its victims today have been many times before, and will continue to be so long as they live. However, after all has been said, the fact remains that there is a very heavy shortage in onion seed, and with the prospective onion, and onion set crops decidedly short, seed should, and probably will, rule higher in price than at any time in twenty-five years.

Peas are looking well, and that is all that can be said with confidence at this time; in course of two or three weeks estimates will be of more value. One thing is sure, however, and that is, the crop is at least two weeks late, which naturally increases the danger from drought and excessive heat, and as the stand in many places is light, owing to a considerable percentage of the seed rotting in the ground, heat and drought will be more destructive than where the stand is heavier.

There has been some good corn weather, but corn is under a very severe handicap, and not much encouragement can be offered, at least so far as sugar corn is concerned.

While fine seeds are far from being a hopeless case they are not up in condition to what they usually are at this time of year. Potatoes are late and

ZIRNGIEBEL'S GIANT PANSIES

Fresh Crop

Now Ready

Famed for a quarter of a century and when you buy them you get the best in existence. I am continuing the pansy business on exactly the same standard as carried on by my father, the late DENYS ZIRNGIEBEL. None genuine unless sold by me.

AUGUSTUS ZIRNGIEBEL, Needham, Mass.

GIANT MARKET. "The Variety for the Million." Trade packet, 2000 seeds, \$1.00.

GIANT FANCY. The NE PLUS ULTRA in Pansies. Trade packet, 1000 seeds, \$1.00.

generally not looking any too robust. Predictions are freely made that the crop will be much below average as to quality and quantity. Any material improvement or deterioration from the present level will be noted in HORTICULTURE from time to time.

Several new firms were added to the membership of the American Seed Trade Association at its recent meeting in New York city, and not one of them but should prove a worthy and desirable addition to its members.

It is reported that C. B. Coe who represented D. W. Ferry & Co. on the road for many years, and who has been out of harness since about 1898 has again donned the livery of the old firm, and will soon start on the trail. His familiar war whoop will again make the welkin ring and the timid ones will make for cover. Success to him.

The pleasant announcement is made that the plan to liquidate the business of Rennie & Thompson of Providence, R. I. has been successful and that all accounts due creditors of the firm have been paid in full. The firm will be dissolved, Mr. Thompson retiring, and it is possible that Mr. Rennie may continue the business.

It is the general verdict of the trade that they have had an exceptionally good year, despite the heavy falling off in April and May. June has been as busy for the retail seedsman as May

usually is. As a result seed stocks are at a very low level, and any material shortage in crop deliveries this fall and winter will mean pretty high prices. Cover your shorts early.

Mr. James Farquhar of R. & J. Farquhar & Co., Boston, has gone to Porto Rico to inspect the plantations which the firm has there.

JOSEPH HEACOCK CO.,Clean, Thrifty Stock
Our Specialty**DUTY ON EVERGREEN SEEDLINGS.**

The customs authorities have many delicate questions which they are called upon to decide. The following opinion of the General Appraisers is sufficiently close and interesting enough to warrant publishing it in full:

(T. D. 28247—G. A. 6618.)
Evergreen seedlings.

Plants from 2 feet to 2 1/2 feet high, propagated or raised from the seed of the Indian "deodar" (*Cedrus deodara*), which is a forest cedar native of the Himalayas, are not dutiable as "seedlings of ornamental evergreen trees," or as "nursery stock" at 25 per cent. ad valorem under paragraph 252, tariff act of 1897, but as "evergreen seedlings" at \$1 per thousand plants and 15 per cent. ad valorem, as provided for in the same paragraph.

United States General Appraisers, New York, June 14, 1907.

In the matter of protest 251489 of Howard & Smith against the assessment of duty by the collector of customs at the port of Los Angeles.

Before Board 3 (Waite, Somerville, and Hay, General Appraisers).

Waite, General Appraiser: The importation consists of 1000 evergreen seedlings. The relevant provisions of paragraph 252 of the tariff act of 1897 are as follows:

(1) Evergreen seedlings, one dollar per thousand plants and fifteen per centum ad valorem; (2) stocks, cuttings and seedlings of all fruit and ornamental trees, deciduous and evergreen, shrubs and vines, manetti, multiflora and brier rose, and all trees, shrubs, plants and vines, commonly known as nursery or greenhouse stock, not specially provided for in this Act, twenty-five per centum ad valorem.

The testimony shows that the plants in question are propagated or raised from the seed of a forest cedar, native of the Himalayas, botanically known as *Cedrus deodara*, which is the Indian "deodar." Those in the importation are from 2 feet to 2 1/2 feet high, and have been transplanted. This fact, however, does not remove them from the class of seedlings. G. A. 5305 (T. D. 24305).

In the opinion of the Board these plants are not "seedlings of ornamental evergreen trees," unless all varieties of pine and fir should be so classified. It is matter of common knowledge that the deodar is a forest tree, and while ornamental in the broad sense that applies to many other forest trees, probably is chiefly valuable for its timber. "Deodar," Standard Dictionary, and "cedrus," Paxton's Botanical Diction-

ary. Unless the earlier provisions for "evergreen seedlings" in paragraph 252 covers such plants, we fail to see what application it can have. There is, moreover, doubt in our mind, in view of the comprehensive nature of the last provision in paragraph 252 and the fact that it is qualified by the words "not specially provided for," whether the term "seedlings" in said provision refers to the evergreen trees therein provided for, as it would have ample scope with reference to the various other trees, plants, etc., mentioned in such provision. G. A. 5645 (T. D. 25211); United States v. American Express Company (T. D. 28206).

The Board has also considered whether the last clause of section 7 of the act might not be invoked. It provides:

If two or more rates of duty shall be applicable to any imported article, it shall pay duty at the highest of such rates.

Under this provision the rate of 25 per cent. ad valorem assessed by the collector in this case would be higher than the duty of \$1 per thousand plants and 15 per cent. ad valorem, which the importers claim to be applicable inasmuch as the plants are valued at \$102 per thousand. It is evident that if this were made the test evergreen seedlings would be dutiable at the former or the latter rate according as they were valued at more or less than \$10 per thousand plants. Under the doctrine of *Loggie v. United States*, decided by the circuit court of appeals for the first circuit (137 Fed. Rep., 813; T. D. 26340), it would be improper to apply section 7 under such circumstances.

We are of the opinion that the plants in question should be classified as evergreen seedlings under the first provision in paragraph 252, and sustain the protest and reverse the collector's decision.

MELONS UNDER GLASS.

Read before the Morris County Gardeners and Florists' Society, June 12, 1907, by Robt. Tyson.

Starting the Seedlings.

Good, well-finished melons are considered by many as one of the best fruits grown, especially in the summer time. The houses in which they are to be grown should be thoroughly washed and painted, if possible, to insure getting rid of insects. The time for sowing the seeds depends on when the fruit is wanted, the crop taking from start to finish about three months.

Start by sowing good plump seeds singly in 3 in. pots in good fibrous loam, put in a temperature of from 70 to 75 degrees, and in about a week germination will have taken place. Keep the growing plants as near the glass as possible, in the same temperature, to insure sturdiness. When they are well rooted in 3's they may be planted or potted on to a larger size, as circumstances require.

Planting, Staking, etc.

A bed 6 in. deep and 10 in. wide, formed between two boards and made up of good loam with a little wood ashes or charcoal mixed through it, will be sufficient to start with. Make it firm, but not too hard for the water to get through it readily, and set plants about 28 or 30 inches apart. Keep the house at a temperature of 70 degrees nights, with a rise of 10 degrees by sun heat, ventilating on all favorable occasions, but avoiding cold draughts. A syringe overhead twice a day and careful watering is very essential until the young plants have started in the bed, when they will need a stake to carry them to the trellis. In placing the stake, be careful to keep well away from the ball of roots, otherwise many may be cut off. Tying now must be attended to, and all lateral shoots pinched out until the trellis is reached, after which they are to be trained to the wires. When the plant reaches the top of the wires, the point should

be pinched out to encourage the side shoots to grow freely.

Pinching and Setting.

Most varieties show the female or fruiting flowers at the first leaf on the lateral. These ought to be pinched at the second leaf, or one beyond the flower; others which do not show flowers ought to be pinched at the first leaf and allowed to break again, when they will flower on the sub-lateral. As the flowers open, a dryer atmosphere will be beneficial, and about noon each day, if the pollen is dry, artificial fertilization must be resorted to either by means of a camel's hair brush or otherwise, all of which is easily understood.

After a set has been obtained, thin to the required number, two, or at most three, fruits to a plant, taking care that they are all of one size, otherwise some will swell at the expense of others.

Fertilizing.

At this stage, examination of the bed may disclose a mass of roots. In this case, open out the boards three or four inches and fill with soil, the same as used when planting, with the addition of a 6 in. pot of Clay's fertilizer to about a wheel-barrow load, covering also any roots that appear on top of the bed. In a few days, or when the fruits are about the size of a croquet ball, some support will be necessary, either by pieces of net or boards (net preferable). If boards are used, holes in the bottom are necessary to let away any moisture. When the fruit is swelling, do not allow the plants to suffer for water; also avoid letting the bed get too dry before watering, or cracking of the fruit will follow. After they are rooted through all the soil, some weak manure water will be helpful, increasing the strength and changing it occasionally if the fruit is wanted large, but discontinue feeding and diminish the water supply when the fruits have finished swelling and show signs of ripening. Syringe and ventilate freely at all times and during ripening a little air left in all night when the temperature is above 65 degrees will improve the flavor.

Insect Enemies.

The worst enemy of melons in the

way of insects is red spider, but if syringing the plants and dampening the house are properly attended to, there will be little red spider. If it should get a start, "X L All" insecticide, one part to forty water, will clean it out and do no harm to the plants. The same dose is applicable for green or black fly. Canker is sometimes troublesome. Should it put in an appearance, a little dry lime or powdered charcoal rubbed over the affected parts will arrest it. Prevention is better than cure, so don't syringe too late in the afternoon but what the leaves can fully dry out before night; and, again, don't water too near the stem of the plant.

The fruit will show signs of ripening by cracking around the stem. When it is cracked all around, cut from the plant and keep in the fruit room twenty-four hours before using, which will greatly help the flavor.

The Best Varieties.

The best varieties in our opinion are—green fleshed, Royal Jubilee and Sutton's Ringleader; scarlet fleshed, Sutton's Superlative; white fleshed, Hero of Lockings and Sutton's Perfection. All the varieties mentioned are English, which we find are better adapted to indoor culture than the American varieties, not so much in point of flavor, but for thickness and firmness of flesh. Of all the varieties we are growing and have grown, Royal Jubilee is the best, being a free grower, good setter and fine flavored, fruit on plants carrying two or three averaging from five to eight lbs.

Crops in eastern Massachusetts are backward, but with prospects for an average yield in most of the staples. There will be a big apple crop, considering that this is the "off year," especially in the hill towns. Corn is looking well on the average; backward, but about the usual acreage. There is fully the usual acreage of potatoes, and since warm weather set in they are starting along in good shape. Asparagus has yielded a light crop and of only medium quality, but other market garden products have been about as usual in yield and price. Berries will be late and crop light.

ANNUAL PICNIC OF THE NEW YORK FLORISTS' CLUB.

News Notes.

A fire destroyed the retail store of Jex the Florist, at Spanish Fork, Utah, on July 3.

The florists of Concord, N. H., will close their stores on Wednesday afternoons during July and August.

Five o'clock on week days and noon on Sundays is the closing time for the summer agreed upon by the wholesale florists of Chicago.

Philip Gurney doing business as C. W. Gurney & Son and The Wakefield Nursery, Wakefield, Neb., has gone into bankruptcy. Assets light, liabilities heavy.

A superb pan of *Crassula coccinea*—a mass of brilliant bloom nearly three feet in diameter—is a potent attraction in Thos. F. Galvin's store window on Tremont street, Boston, this week.

An inquest in the case of Frank Sloan, night watchman at the nurseries of Ellwanger & Barry, Rochester, N. Y., who was found dead on June 30, strengthens the theory that his death was due to electrocution.

"Penn, the Florist," was the winner of first prize for the most artistically decorated wagon in the July 4th parade at Somerville, Mass. The same horses took first prize in the Boston work-horse parade on May 30th.

FLOWER MARKET REPORTS

BOSTON Very little business is coming in at present to either retail or wholesale flower people and, as usual at this dull season, growers are throwing out old stock and replanting, thus shortening up the supply for the time being. Quality is not extra on any line of roses, but the summer favorites are improving in size and finish, and by the time Boston's Old Home Week celebration is on there will be some fine roses to tempt the visitors. Carnations are on the downward grade as to quality. Sweet peas and lily of the valley are excellent. Fancy pond lilies are abundant.

BUFFALO Conditions have changed but slightly during the past week. Peonies which should have been over with three weeks ago, were in abundance, with no demand whatever. Roses and carnations were still in heavy supply with no outlet; on the latter the prices were the lowest of the season, the best varieties being Lawson and Victory; as for Enchantress and other varieties, "Sleepy Side," Beauty, Richmond, Killarney, Chatenay, Carnot and Kaiserin roses are of excellent quality; Bridesmaid and Bride, milked and poor. Very little demand for anything; the coolers are overloaded at the wholesalers', and the retailers buy only what little is needed. Vacations are in order and picnic talk getting louder.

NEW YORK The receipts of flowers in all varieties and all degrees of quality, outdoor and indoor, continue heavy, but in some lines considerably lighter than at last report. It makes little difference whether the receipts are large or small, and they might be cut down to one-quarter their present bulk without creating a ripple on the surface of values or adding one cent to the income from their sale. There is little for anybody to do except to keep things tidied up and look resigned.

PHILADELPHIA Business is about normal for mid-summer with

much more material arriving than there is demand for. The quality as a rule is poor with the exception perhaps of American Beauty and Kaiserin roses, and lilies. Really good carnations are not to be had. Sweet peas are now about on their last legs. Asters have commenced arriving but quality nothing extra as yet. Japanese iris are another new feature, as are also an unusual quantity of candidum lilies. It is a pity these could not have reached us earlier in the season but as it is they find a fairly good market for funeral design work. Other summer staples are in good supply and quality. The market is full of every variety of material and no buyer need worry about having his wants satisfactorily filled.

SAN FRANCISCO

The last week has been quite busy on account of the school commencement and graduating exercises. This has been quite a boon to the florists of San Francisco, as the street car strike has sent most of the flower-buying people out of the city earlier than usual. The street car service is steadily improving, however, so we are looking for another prosperous season, for which florists and growers will be more than thankful.

WASHINGTON

There is almost nothing doing in the cut flower line. Several of the florists have filled up their windows very artistically as miniature ponds and that gives the pond lilies a slight showing. Carnations and sweet peas are almost things of the past; the growers are beginning now to throw out their old carnation plants to make room for the new crop in August. Let us hope we will have some better growing weather, before they will have to be moved in.

There is a fair demand for pond lil-

ies, and all kinds of green goes at good figures for this time of year. Sweet peas are a glut and can hardly be disposed of at any price.

PHILADELPHIA NOTES.

The temporary quarters of the Philadelphia Cut Flower Co. are at 1502 Sansom St. W. J. Muth is sojourning at Lavalette, N. J.

A sweet pea exhibition was held under the auspices of the Penn. Horticultural Society on the 9th and 10th inst at Horticultural Hall, Philadelphia. Lectures were given on the evening of the 10th inst on sweet peas and hardy perennials.

Chas. E. Meehan of the S. S. Pennock-Meehan Co., is summering with his family at Ocean City, N. J.

The Elks convention has created a great commotion here. Decorations are very lavish. Among the most striking in the trade is the store front, window display, and interior of the Michell Seed Store, executed under the guidance of Philip Pfreud.

A special meeting of the Florists' Club Executive Committee was held on the 11th inst to complete the entertainment program for the convention in August. It is understood that the sentiment is strongly in favor of a purely Philadelphia program this time in the hope of dispelling the popular outside ignorance of the up-to-date character of this modern progressive city.

Thomas J. Oberlin of Sinking Spring, Pa., is highly delighted with his last week's sojourn in our midst especially with his visit to Samuel S. Pennock's country home. Since his lecture on the "hogbacks" many of our local growers and distributors are facetious and want to hear about the redemption of the hogback market, the hogback buyer, the hogback payer and the final elimination of the hog who insists on getting all four feet in the trough!

Howard M. Earl has arrived home after a record trip on crop inspection in California and other points West and South.

FLORISTS' SUPPLIES

545 Liberty St., PITTSBURG, PA.

Long Distance 'Phone 1435 Court.

BUSINESS CHANGES.

The firm of Buth & Shea succeed Buth & Woback at De Pere, Wis.

L. Burnham has purchased the business of L. Davenport, Lawrence, Mass.

F. Pullman has bought out The Benton Floral Co., Benton Harbor, Mich.

Frank M. Gibbs has purchased the business of Mrs. C. D. Kingman of Middleboro, Mass.

George W. Marshall has purchased the business of the Elm Grove Flower Co., So. Norwalk, Ct.

Wm. Currier has purchased the interest of his partner in the business carried on at Elkhart, Ind.

The firm of Ordonez, de Nave & Co., Madison, N. J., has been dissolved. Business will be continued in the same place under the name Ordonez Bros., who have assumed all assets and liabilities of the old firm.

The firm of Dummett & Wagner of Mount Vernon, N. Y., has been dissolved. Mr. Wagner will carry on a retail flower business with greenhouses on Union avenue; Mr. Dummett will confine himself to the landscape and nursery business.

Members of the State Florists' Association met at the State House in Indianapolis, July 2, to make preliminary plans for the annual flower show to be held in Indianapolis early in November.

Richard H. Junge is president of the association and A. F. J. Bauer is secretary.

In place of Tomlinson Hall this year it is probable that the Propylaeum will be selected for the exhibition and admittance made free to the public.

BETWEEN YOU AND ME, What do you think of the Buyer's Directory and Ready Reference Guide of HORTICULTURE? I always look it over before I do any buying.

APPRAISER'S DECISION.

No. 15840 — Greenhouse Stock — Cyrus Clumps—Protest 211757 of Henry & Lee against the assessment of duty by the collector of customs at the port of New York. Before Board 1, June 18, 1907.

The protest related to merchandise assessed with duty under paragraph 251, tariff act of 1897, and claimed to be free of duty under paragraph 548 (drugs), paragraph 562 (palm leaf), 566 (crude fibrous vegetable substances), or paragraph 617 (crude vegetable substances). Protest overruled.

McClelland, General Appraiser: The special report of the appraiser accompanying this protest states that the merchandise consists of "cycas stems." He further states that "the plants themselves are imported in the shape of dormant trunks or clumps, which are potted and subjected to heat, thus producing root and leaf growth. * * * As the cycas palm can not be transported from the Orient, it is removed from earth, the leaves and roots are allowed to dry off and when this is accomplished the clump or trunk is shipped."

Counsel for importers have indorsed on the papers the following:

Submitted on appraiser's report with request for favorable decision. Paragraph 251 provides only for various sorts of bulbs, bulbous roots, and corms, which these are not. (T. D. 28278.)

We have carefully considered the provisions of each of the said paragraphs relied upon by protestants for free entry, but fail to find any one of them that could reasonably be held to cover the merchandise in question; and therefore each of the claims is overruled. Thus it only remains to determine whether the collector's classification under paragraph 251 was the correct one. It may be open to question whether the cycas palm "dried off" with the leaves removed, is a palm within the meaning of the language of said paragraph 251; and we think it unnecessary to decide that question, since if it is not it is certainly greenhouse stock not specially provided for, under the provisions of paragraph 252 of said act, dutiable at the same rate assessed in this case by the collector.

MISCELLANEOUS WANTS

I want second-hand Greenhouse glass. Price must be low. H. Taylor, Box 132, Quincy, Mass.

Is Your Name In The Above List? If Not, Why Not?

A BEAUTIFUL S. A. F. TROPHY.

We picture herewith the Henry F. Michell Company's Bowling Trophy. It is to be contested for annually by the bowling clubs of the Society of American Florists and becomes the property of the club winning it three times. The first series of games will be played in Philadelphia from August 20th to August 24th.

The trophy, which was designed and made by Maxwell & Berlet, Inc., of Philadelphia, is a superb placque of Flemish oak, 14 inches long by 12 1-2 inches wide, on which is applied a hand-wrought copper shield—this, in turn, embellished with a solid silver shield, on which is etched a series of bowling alleys and a bowler about to play. The details of this etching are particularly interesting—the perspective is perfect, while even such small details as the score board, sponge and cup, sand box and hand cloth are not omitted. In each corner of the Flemish oak background is applied a massive silver bowling ball, on which will be engraved—each year—the name of the successful contesting club. The copper and solid silver shields are secured with hand-wrought rivets.

The entire piece suggests the arts craftsmanship which has sprung into favorable prominence during the past year.

This valuable trophy, through its originality, reflects great credit on the donors, the well-known seedsmen, the Henry F. Michell Company, 1018 Market Street, Philadelphia, Pa.

PUBLICATIONS RECEIVED.

Circular No. 90 of the Bureau of Entomology is devoted to the White-Fine Weevil, by A. D. Hopkins and is a partial revision of what has hitherto been published.

Bulletin 29 from the Office of Public Roads is on the Construction of Macadam Roads. Austin B. Fletcher, author. Fifty-six pages of instruction in the practice of road making, fully illustrated.

The "Use Book," containing instructions for the use of the National Forests has been issued from the office of the Secretary of Agriculture. This is the second revision of the regulations and instructions by Gifford Pinchot, Forester. The Appendix gives in full the statutes under which the National Forests are created and administered. The volume comprises 248 pages.

"The Chinch Bug" is the title of Bulletin 69 of the Bureau of Entomology, U. S. Dept. of Agriculture, by F. M. Webster. This bulletin is one

of the most elaborate ever sent out by the department, comprising 96 pages devoted to the habits, the parasites, remedial and preventive measures, and other valuable information concerning this notorious pest which, it is estimated, has already cost the agricultural interests of this country \$330,000,000.

The Nineteenth Annual Report of the Massachusetts Horticultural Experiment Station has been issued and, as usual, is full of valuable reports on topics of widespread interest which should be perused by every tiller of the soil. The section on fertilizers is interesting. It emphasizes the necessity for a reduction of the number of brands of fertilizers on the market and notes the decline in general quality of wood ashes. Especially valuable is the report of the botanist covering the use of Bordeaux mixture and its tonic influence on plant assimilation, the menace of the tomato rot, the injurious effect of improper spraying of trees, the bacterial disease of the cucumber under glass, the troubles due to improper use of fertilizers on tobacco, the San Jose scale, the injurious effects of banding trees, the injury to tree roots by illuminating gas, soil textures, etc. The entomologists' report is also full of instructive material and the horticulturist reports in detail the results of experiments in mushroom growing. The Massachusetts Experiment Station is fulfilling its mission wisely. The report will be sent free to all applicants.

ROSE GROWERS

Should read this statement by the President of the American Rose Society, known as one of the most successful rose growers for the New York Market:

WM. W. CASTLE CO., Boston, Mass.

Clifton, N. J., June 25, 1907.

Gentlemen:—Replying to your letter asking my opinion of your Circulator after a season's use, would say that I can conscientiously say that it does all that you claimed it would do.

We are using a six inch Circulator to care for 12,000 feet of two inch pipe, and have it attached to the main return near the boiler. Running the system under gravity, we are able to get a temperature of 105 to 110 degrees in the main return, but within ten minutes after starting the Circulator, we get 130 to 135 degrees, which I consider excellent work. I have not attempted to figure out the saving in fuel by using the Circulator, but it must be quite considerable; the boiler can do its work with far less forcing, and thus a smaller boiler and less piping would do the work than would be necessary under the gravity system. With our large houses 475 feet long we could not possibly heat them satisfactorily without either the Electric Circulator or some other system of forced circulation.

Wishing you every success, I am,
Yours very truly,

(Signed) ROBERT SIMPSON.

Our Steel Plate Hot Water Boiler and Electric Circulator constitute

ANOTHER THING TO THINK OVER

You know how a chicken will start on a keen run from a neighboring field to run across in front of a wagon? The chicken lacks sense that's sure! But what of growers who go out of their way to install boilers that in their fundamental principles are for residence heating? Residence heating is not greenhouse heating. You must have a greenhouse boiler to heat your greenhouse economically. We have two greenhouse boilers, the tried-out-and-proven Corrugated Firebox boiler and our new friend the Sectional.

Think over the chicken episode and send 5c in stamps for our boiler catalog.

HITCHINGS AND CO.

GREENHOUSE DESIGNERS AND BUILDERS.

Manufacturers of Heating and Ventilating Apparatus.

1170 Broadway,

NEW YORK.

All you need is a monkey wrench and a screw driver to set up a "Burnham" Boiler

If you have had set up troubles of your own, or have seen others struggling with four or five men to set up a boiler—one that never was a greenhouse boiler, because it was not made especially for greenhouse work—then you see the force of the "Burnham" way, with its push nipples and single tie bolts to each section.

It is just as easy to add more sections. No new base, no disturbing of piping. It is told about in the new catalog.

SEND FOR IT

LORD & BURNHAM CO.

Greenhouse Designers and Manufacturers

1133 BROADWAY, cor. 26th Street, N. Y.

BOSTON Branch: 819 Tremont Building

PHILADELPHIA Branch: 1211 Filbert St.

You can see plain enough from this section what the combining of roof bar and rafter as one means. There is no construction as light and still as strong

HERE is nothing better than a section to show to you the lightness and general arrangement of

a U-Bar, three quarter span greenhouse. The U-Bar which supports the glass without the addition of rafters—as required in other constructions—looks to be about the size of a broom handle—and so they are. You see that the gutter and sill are combined, and placed on top of wall. That same lightness, yet strength in the house itself, is carried through its entire equipment. The galvanized iron frame, tiled bottom benches, and ventilation apparatus show that fact. Note how hand wheel is set just inside bench line so the handle is always completely out of the way.

These points may seem small of themselves, but they all combine to make the U-Bar house the perfect house it is. Did you ever send for that new catalogue?

A National Rose Show

The most famous rose show that England can boast—the National Rose Society's Annual Metropolitan Exhibition—was held on July 4th in the beautiful grounds of the Royal Botanic Society in the heart of London. We have had wretched weather so far this summer—hardly a fine day for the past two months and very little sun—so that as fine a display as usual was hardly expected and we were fortunate in having only a showery day instead of a wet one. Her majesty, the Queen, visited the show early in the afternoon and spent a considerable time in the tents examining the exhibits that were on view. The blue ribbon of the show is the Champion Challenge Trophy, value sixty guineas, which together with a gold medal and four pounds in money, is offered for the best exhibit of seventy-two blooms of cut roses, distinct varieties, by nurserymen. Needless to say the winning exhibit which was from the famous Hitchin rose growers (R. Harkness & Co.) made a remarkably handsome display. There you can see at a glance seventy-two of the best roses in cultivation. Some of them no doubt are "exhibitors' roses," yet most of them are equally as valuable in the garden as for the show board. If I mention the names of a few of the best varieties in this exhibit they may be taken as being some of the finest roses in the show. Certain varieties were conspicuously good throughout the exhibition and most of them were to be found in the prize-winning stand of 72 blooms. The new Richmond rose that we received from the United States was splendidly shown, so too was Liberty which closely resembles it, and upon which Richmond is said to be an improvement. The flowers of the latter certainly seem larger and of brighter coloring. Lady Ashtown, a Hybrid Tea rose of perfect form, was admirably shown by many exhibitors. Mrs. W. J. Grant was a great favorite and has probably never been seen in finer form. The inimitable Frau Karl Druschki, the famous white Hybrid Perpetual, was shown in every class in which it was allowed and it was undoubtedly the finest white rose in the show.

You may remember that a few weeks ago I wrote saying that, at the instance of Mr. W. E. Nickerson, of Cambridge, Mass., the general committee of the National Rose Society decided, by ballot, that the three best roses were Frau Karl Druschki (H. P.), Dean Hole (H. T.) and Mme. Jules Gravereaux (T.). There were classes for these three roses and magnificent blooms of each were on view.

Probably the favorite exhibition Tea roses are Mrs. Edward Mawley and Maman Cochet, and they were as perfectly shown as one could wish. Some of the red and crimson roses were magnificent—in fact, it is doubtful if ever they have been finer than this year. The cool moist weather that has prevailed seems to have suited them perfectly. Such as Captain Haywood, C. J. Grahame, Crown Prince, Hugh Dickson, Prince Ar-

thur, Duke of Edinburgh, Duke of Wellington, Rev. Alan Cheales and other well known sorts were much admired.

Several new roses were shown. Two received gold medals and a card of commendation was awarded to each of two other new ones. The gold medals were awarded to the varieties Queen of Spain (H. T.) and Lady Helen Vincent (H. T.).

Queen of Spain has been on the market some little time. It is a full flower, of good form and has already made many friends, for it is suitable either for exhibition or for providing a quantity of cut bloom in the garden. The centre of the flowers is deep flesh pink, fading almost to white at the petal margins. This fine rose was sent out and exhibited by Messrs. S. Bide & Sons.

Lady Helen Vincent has shell-like petals, colored rosy salmon outside and paler within. It was exhibited by Messrs. A. Dickson & Sons, Ltd.

Mrs. Henry Weller, which received a card of commendation, is a new variety which is the result of a cross between Madame Abel Chatenay and Mrs. W. J. Grant. It may perhaps be best described by saying that it appears to be intermediate between the parents. It is of beautiful salmon rose coloring. Judging by the blooms on view this is a rose that will be more valuable for the display it makes in the garden than for the exhibitor's stand. Shown by Wm. Henry Weller.

Goldfinch is a new rambling rose remarkable for the rich yellow buds that it bears in profusion. When the buds develop and age they lose the rich coloring that distinguishes them when young, and become considerably paler. This rose, to which a card of commendation was awarded, was shown by Messrs. Paul & Son.

In the nurserymen's classes a silver medal is awarded to three blooms, the best Hybrid Perpetual, Hybrid Tea and Tea. The best Hybrid Perpetual was shown by Messrs. A. Dickson & Sons, who won the silver medal for a splendid bloom of Suzanne Marie Rhodocanachi. The silver medal for the best Hybrid Tea went to Mildred Grant, a well known exhibition variety, shown by Harkness & Co., in their first prize exhibit of 72 blooms. The silver medal Tea Rose was Mrs. Edward Mawley, a flower remarkable for its unusually rich coloring, shown by Burrell & Co.

Boston Old Home Week

The week of July 29—Aug. 3 will be a gala time in Boston. HORTICULTURE will be glad to extend a hearty welcome to visitors and hopes there will be lots of them. Make yourself at home at our office, 11 Hamilton Place, opposite Park Street subway station. Or telephone us (Oxford 292) on your arrival in Boston.

British Horticulture

A NOTED DEVON NURSERY

Amongst the awards given at the meeting of the Royal Horticultural Society this week was one for Veitch's hybrid calceolaria. This has been obtained from a cross between *C. plantaginea* and a variety of the herbaceous section. The moderate-sized flowers are of a brilliant yellow color, with a small red spot on the back of the lower lip. The foliage is similar to that of *C. plantaginea*. It has been grown in the open without protection, and has withstood several degrees of frost; it flowers in May and onwards. At the Cleve nursery of this firm a splendid display has lately been made with Himalayan rhododendrons. The chief varieties grown include *arboreum*, William Shilson, pink; *coccineum*, crimson; *Russelianum*, red; *Aucklandi*, pink; *barbatum*, scarlet; *campanulatum*, mauve; *campylocarpum*, yellow; *Roylsi*, a red form of *cinnabarinum*. *Ericas* are also a special feature. These embrace the new white *Veitchii*, *codonoides*, white tinted pink; *australis*, pink. The Mediterranean heaths include *alba*, *glaucus*, *hybrida*, whilst among the dwarf section are *cornea* and its varieties. The *E. cinerea* section—*rosea*, *alba* and *coccinea*—gives a succession of flowers all the year round. At the nursery there is a fine hedge of *Choisya ternata*, which is from 8 to 10 feet high, and 4 to 5 feet through.

ELECTRICITY AND VINE CULTURE

There is apparently no limit to the uses to which electricity can be applied in the service of man. If the same progress is made in developing its uses during the next decade as in the last few years we shall arrive at a very high stage of perfection. According to Mr. George Masee, the well-known scientist at Kew Gardens, electricity is now being successfully used in promoting the growth of the vine, and in destroying its parasitic enemies. The discovery was first made by a cultivator of vines. The method consisted in the arrangement of two series of metallic conductors traversing the roots at a depth of about sixty centimetres, so as not to injure the above ground portion of the vines. The experiment was tried on vines badly infected with phylloxera, and at the end of the first season it was found that most of the insects were killed, and at the finish of the second season not a single living insect could be discovered. In addition to destroying the phylloxera, it was observed that the treated vines grew much more vigorously than a check batch of untreated ones; the quantity and quality of the fruit was also improved in the treated batch. Further experiments will be awaited with interest. Trials are also being conducted in this country in the utilization of electricity for the increase of agricultural crops.

THE ROSE SHOW

Excellent arrangements have been made for the annual rose show which is taking place in the gardens of the Royal Botanic Society, on July 4th, under the auspices of the National Society. The National Rose Society has made rapid strides during the last few years, the membership now numbering 2,000, indicating the increased interest which is being taken in the "Queen of flowers" in this country. We have been passing through a very trying summer, the weather being cold, wet and unsettled. It is satisfactory to find that in spite of this inclemency the rose prospects are very

favorable. Herbert E. Molyneux, a well known rosarian, writes: "It is a good many years since I remember roses looking better than they do at the present time. Such flowers as have been out have come very well, of good shape and quite remarkable in color, and, given a few days' sunshine, or, better still, really hot weather, the rose will soon be in the height of its glory. It is really astonishing how quickly the plants respond to a little heat. Taken on the whole, the weather has not apparently been so unkind as some would appear to think. With a few exceptions, gardeners generally seem to have escaped the late frosts that have in former years played havoc, and although the weather has been unusually cold, it has not been severe enough to do any damage. The fact remains that the plants promise uncommonly well, and I shall be disappointed if we have not in front of us the best rose year we have had for very many (certainly seven or eight) years."

SWEET PEAS

The advent of new aspirants for popularity in the sweet pea world shows no diminution. Two new varieties were shown this week at the Royal Horticultural Hall, and received awards of merit, the exhibitor being Miss H. Hemus. Evelyn Hemus has creamy-white blooms of large size, with rose-colored margins to the petals. Carmine Paradise is of a brilliant carmine tint, of a graceful form, with an erect standard. There is likely to be a good display of novelties at the annual exhibition of the National Sweet Pea Society, in London, in July. A novel sweet pea competition has been arranged in connection with the North Lonsdale Rose Show at Ulverston. It is proposed to offer a gold, silver and a bronze medal for new sweet peas not in commerce. Each new variety will be staged under a number only, and the visitors will be invited to record their votes for the best varieties. The merit of the varieties will then be judged by popular vote, and the medals will be awarded in accordance with the result of the ballot. This is an application of democratic principles to floral displays. The winners will have no cause to complain of any bias or favoritism being shown, seeing that the majority will decide the events.

W. H. Adsett.

Rose Soils

A great variety of soils can be successfully used for the growing of roses, but a moderately heavy loam from a well-rotted sod is perhaps the most favorable. If the right type of soil can not be found, light and heavy soils can be mixed to secure a soil of the desired texture. If it is desired to secure a soil for a forcing house or for potting purposes the sod should be very thoroughly rotted and have incorporated with it about one-sixth to one-eighth of its weight of thoroughly rotted stable manure. Assuming that the proper loam can be found for rose growing, the sod may be cut in the fall and composted with manure, using about one part manure to three parts soil. During the composting period this pile should be turned and mixed several times previous to use, getting it into good even condition.

For the production of good roses, the matter of feed-

ing the plant is of great importance. What to feed, when to feed, and how to feed are questions often asked and for their answer one has to depend largely upon the experience of expert growers and experimenters. While there is a great deal yet to be learned by careful experiment, yet a statement of general practice for the feeding of such plants is of much value. To the mixed material indicated above there should be added a short time before the planting of the rose fine ground steamed bone to serve as a source of phosphoric acid and about one pound muriate of potash to a cubic yard of soil should also be used. It is well to remember that the compost for starting the new plants should not be too rich to start with or the roots of the young plants will be injured. In the production of this class of plants there is much greater damage of overfeeding with nitrogen, than underfeeding, still one must be careful and not go to the other extreme, for if one would have large, healthy, well-formed flowers, there must be an abundance of easily available plant food in the soil. It is more desirable in feeding roses and similar crops to rely upon barnyard manures, supplemented with bone and potash than to attempt to give all of the plant food through the medium of commercial fertilizers, still success can be had even through the latter medium alone.

If the vegetative growth needs stimulating and brightening, and the plants have strong root systems, a liberal feeding of nitrate of soda, say 10 oz. to 50 gallons of water per 100 square feet of area may serve a purpose. If the growth is active and of good color, but rather spindling and short, there is evidence of the need of potash, in which case nitrogen should be avoided. Potash may be supplied by giving an application of sulfate of potash used at the rate of 8 to 12 oz. to 50 gallons of water per 100 square feet at intervals of ten days to two weeks, or, the undissolved sulfate of potash may be sprinkled at the same rate per 100 square feet. This application should be followed for the second and third application, by lime at the rate of 1 lb. to 20 square feet. If the plants are growing well but are not making flower buds, they should be given liberal applications of phosphoric acid in the shape of steamed fine bone, or if it is desired to avoid the nitrogen entirely supply superphosphate at the rate of 1 lb. to 100 sq. feet, followed in a short time by an application of lime as in the case of potash.

If there is reason to believe that a complete plant food is necessary to promote the growth of the plants the following combination of materials is recommended:

¼ lb. Nitrate of Soda,
1 lb. Acid Phosphate,
½ lb. Sulphate of Potash,

for 150 square feet of area. The following formula is recommended by Professor Stewart of Indiana, and is a complete fertilizer for roses:

Superphosphate 130 lbs.
Sulphate of Ammonia..... 13 lbs.
Nitrate of Soda..... 31 lbs.
Sulphate of Potash..... 26 lbs.

He recommends 1 oz. of this mixture to one gallon of water for two square yards of bench surface, once a week as the plants need it. One who pays close attention to the food requirements of their plants as well as to the physical condition of the soil will have much better success than from the general haphazard method so often practiced.

GEO. WRIGHT.

The Formal Garden for Perennials

The set and unnatural present-day method of the formal garden for the planting of herbaceous perennials is a fashion that is decidedly against the beauty, effect or general appearance of anything planted.

Do not misunderstand me. By the set formal gardens I mean one entirely composed of oblongs, squares, and circles, the whole very flat and surrounded by a hedge. I am not condemning formality on any estate, but the set formality in arranging the beds for planting herbaceous plants.

The first and most important thing to consider against above method of planting is the inability of anyone to plant for a natural or good color effect. It is impossible to get this effect when the whole arrangement is unnatural, and as for colors there is sure to be some clashing somewhere when standing at different parts of the estate.

Secondly, in such beds one cannot find suitable spots for the growing of all the desirable varieties of perennials, and the center beds cannot be planted without, to some extent, hiding the back.

Third, there is not the scope to make those beautiful masses of peonies, lilies, iris, larkspurs, etc., that are so necessary for beautiful effects.

It is better to plant the bulk of herbaceous perennials in masses. A number of plans for this kind of planting call for one bed of peonies, one of larkspurs and so on through the list, making a big show in one bed and leaving the rest of the garden without any repetition. It is this want of repetition that is to be condemned.

There are other reasons of smaller matter against above method of planting, but one other that strikes me most forcibly now, with temperature ranging in the nineties, is the awful glaring heat, and the rapidity with which the ground will dry, causing all flowers to come to maturity quickly, and pass away before being fully appreciated.

Now, on the other hand, seven or eight times in every ten, there is ground enough for the architect or planter to work out any reasonable scheme that he or she likes, and I think it would be much better if continuous curving paths and beds were used instead of straight lines and right angles.

Have a bed for the herbaceous plants on one side of the path or both sides if possible, carrying the width of the bed from 8 or 10 feet to 3 feet. Instead of a hedge, the background of these borders should be shrubbery of high-grade, leaving out the kinds that are apt to run underground, as these will cause trouble.

Follow the natural tendency of the ground, curving your path to take in desirable trees and rocks; if there are not any naturally plan to work some in. If a brook or some kind of water can be utilized you have an ideal spot for hardy plants. Do not follow any lines when planting the background, but all the time irregularly widen and narrow the border.

It can readily be seen that by this method you have dry and moist positions as well as sunlight and shade, also the borders are well protected from cold sweeping winds, and the natural protection of snow will drift in and stay longer than anywhere else.

its name. It is our conviction that much well-meant work in this direction falls short of its legitimate effect for lack of organized co-operation. That the greatest good to the greatest number individually and collectively can always be attained by united effort is something that few will be bold enough to question, yet when it comes to putting it into practice there are too many who are ready to say, "Let the other fellow do it."

**More gardens
mean more
business**

No one can fail to notice the remarkable increase in numbers of well-kept gardens about town and suburban homes each successive summer. Not only in number but in character and display of good judgment and cultivated taste do these efforts at home adornment impress us and it is easy to see that the seed of popular education in the art of gardening which has been industriously sown by so many public-spirited agencies is beginning to bear abundant fruit. Dealers in seeds, shrubs, trees and garden implements all assert that the spring season just ended has broken the record as to the sale of these things. It requires no argument to show that the direct beneficiaries from the campaign for more beautiful homes are the florist, seedman and nurseryman. This being so, why do we not see those engaged in these industries lined up in the front rank of every movement to diffuse a love for and a proper knowledge of home gardening?

The consideration of the topic above alluded to brings to mind the approaching convention of the Society of American Florists and Ornamental Horticulturists at Philadelphia. The expressed sentiments of the most active spirits in shaping the society's policy at the present time indicate a wholesome appreciation of the situation and the glorious opportunity which has been brought to the very door of the American horticulturist. In its earlier years the S. A. F., with rare tact and patience, took up minor questions concerning the ordinary routine of the florist, groping in the dark, as it were, with practically no generally accessible avenue through which the fragments of dearly-bought experience of the individual might be gathered up, sifted down and incorporated into well-matured rules of practice in the fundamentals of his work. There were selfish doubters in abundance who vehemently condemned the door-opening which the society's policy inaugurated, but where shall we find one to-day who would like to see the florist trade put back to the incoherent conditions that prevailed when the S. A. F. began its campaign of education in first principles? Considering the rich accumulation of practical instruction stored up in the literature of the past twenty-two years, and its wide dissemination by means of the Society publications and through the trade press, the Society shows commendable judgment in devoting its time and effort to broader topics than the minute details of every-day routine. Biggest and best and fullest of promise for the future welfare of every horticultural avocation and allied trades is the question of developing the popular appetite for the products of these industries through school gardens and other means. Having done its part in developing the great floricultural industry it can now turn its attention to the task of securing for those industries that universal popular favor and support which they so well merit. And, in so doing, the Society should have the zealous help of every individual whose interests it thus serves.

Among all its pleasant responsibilities that are most highly esteemed by HORTICULTURE together is the privilege of joining hands with the workers in any movement for the uplifting and advancement of the profession from which it takes

AFTER ADJOURNMENT.

A colored plate of *Laelio-Cattleya* *Andromeda* appears with the July 6th issue of *The Garden*. It shows a spike of flowers somewhat lacking in size but making up for this deficiency in its splendid yellow color. The parentage is given as *Laelia flava* x *Cattleya aurea*.

Commenting on the remarkable sporting proclivities of sweet pea Countess Spencer, a writer in the *Gardeners' Chronicle* expresses the opinion that, owing to this variety's possessing an open keel and protruding stigma cross-pollination may be effected by other than human agency and that this fact may explain some of the peculiar variations in the progeny from plants of true type.

Certain writers in English horticultural journals are deprecating the trend towards trade unionism among the Kew men. A remark of the late director of Kew garden to the effect that "the Kew certificate is being regarded as a danger signal rather than a recommendation" is significant. In this country we have always looked upon the Kew graduate as a man worthy of the highest preferment and if it is true that those who are enjoying the unique advantages for acquiring horticultural knowledge at this time-honored institution are influenced by any sentiment other than the desire to learn and practice then surely must the horticultural world be a heavy loser.

OUR FEATHERED FRIENDS.

Editor of HORTICULTURE:

Dear Sir:—Now that you have started a campaign in favor of our beautiful feathered friends, I feel that every one who loves the life of nature and nature's creatures ought to help you all he or she can; and I know that once people are aroused on a subject as important as this, they will get at the bottom of the trouble and strive to right this great wrong which is being done the birds. No one has a better chance to help in this work than the florist, the gardener, the park man and the householder; but anyone who is out of doors or who has out-of-door interests can be of great service too, for the birds come under the observation of, and call for protection from, all these people.

The Causes of Bird Depletion.

A few words as to the causes of the bird depletion will not be amiss, and a few suggestions as to remedies will help those who wish to give this good work their support. I have already mentioned in another issue the Italian and his work as among the chief causes of bird destruction, but an equally serious one lies at our own doors in the keeping of the household cat. I do not mean to say that every cat catches birds, but every cat will catch adult birds or their young if it has an opportunity, and this is seldom lacking on a place where there are trees and bushes or that is near open fields. It is perfectly safe to say that the average pet cat catches ten birds in a season, and the homeless cat from 50 to 200 birds. Did you ever watch a cat at work in the fields? Most people believe that it is after mice, but while the cat might catch a mouse if it came her way, this

is not her object. Notice the birds and you will see by their frightened motions that her primary motive is to catch young birds. When in the fields the young of the bobolink, ground sparrow, quail and other ground nesting birds suffer particularly from the ravages of the cat.

Then, again, small boys—and not always the very small boys—have a habit of bird-nesting simply for the pure delight of seeing the distress caused by their wanton acts. I have seen a good deal of this work where whole nests were broken up and destroyed not for egg collecting, which, by the way, should be discouraged, but just for the sake of destruction. Certain snakes are very fond of birds' eggs and also of the young birds; so, too, are skunks, weasels, and red squirrels; thus the birds have innumerable enemies to contend against in addition to man.

The Remedies.

Now for the remedies. The Italian should be dealt with by law. A few good examples of punishment in a neighborhood will often prove enough to remedy this evil. There are now laws that compel an unnaturalized person to pay a license of \$25.00 for carrying a gun; this has forced the Italian to use bird-lime and nets so that he needs more careful watching than before, but if every one would make sure that no such methods are being practiced in his neighborhood we could soon change this state of affairs.

The cat is a more difficult problem. We might say, however, destroy all homeless and surplus cats and take good care of the one or two that you keep so that they will stay at home and let the birds alone. During the hatching season of robins, bluebirds, etc., it is well to keep the cat shut up for a week or so, until the birds have learned to fly; by this means many of the young birds will be saved. The cat can be made to wear a loud-ringing bell while the birds are nesting, thus giving warning before it can get to them. To prevent a cat climbing trees and robbing the birds' nests, cut its claws well off.

Where we can ultimately, though, do more good than along any other line is in the education of our children, and the young people of both the city and country. Teach them to look on the birds as their friends, to study their habits and learn the economic relation of these beautiful and useful creatures to the whole system of nature. Instil into your boy or girl a respect for these feathered friends and he or she in turn will carry this respect into the fields and woods, and there find peace, happiness and joy in, and usefulness for, these wild creatures of the air which man has so abused.

WILFRID WHEELER.

SOLD OUT.

Niagara Falls, N. Y., July 17, 1907.
HORTICULTURE Pub. Co.

Gentlemen:—Please discontinue our adv. for Begonias which you inserted last week. The whole lot was taken by one firm, and to date it is necessary that we return cheques amounting to nearly \$200.00.

We are greatly pleased with the adv., although we regret that we have to return cheques on hand.

Very truly yours,

E. A. BUTLER & SON.

THE MISSOURI STATE BOARD OF HORTICULTURE.

Editor HORTICULTURE.

Dear Sir:—

It is the desire of the new board in charge of the horticultural work in Missouri to maintain the close relations in co-operative work and fraternal feeling that has been enjoyed for so many years by the Missouri State Horticultural Society with kindred institutions throughout the country, and if possible come in closer touch with horticultural societies and experiment stations in all the states, also all the fruit growers in Missouri. To this end will you kindly publish in your next issue this announcement:

It became necessary to reorganize the Missouri State Society, as the semi-annual appropriations by the State could not be legally made under the constitution, and the State Board of Horticulture was created by an act of the Legislature of 1907. The members of the board are appointed by the Governor instead of being elected as by the old society. The new board is: C. H. Dutcher, Warrensburg, president; N. F. Murray, Oregon, first vice-president; J. H. Christian, Neosho, second vice-president; T. H. Todd, New Franklin, treasurer; W. P. Stark, Louisiana and R. M. Hitt, Koshkanong. C. H. Dutcher was re-elected president of the old society at the last annual meeting and was elected president of the new board. Geo. T. Tippin was elected secretary at the last annual meeting and was also elected secretary of the new board.

It is the desire of the new board to extend horticultural work and interest in every part of the State and to stand shoulder to shoulder with the horticultural societies and institutions of our sister States in advancing this great work and industry. The office of the secretary is Springfield and all correspondence will receive prompt attention.

Very truly yours,

GEO. T. TIPPIN, Secy.

Kochia Scoparia.

I note your inquiry in current issue of HORTICULTURE regarding *Kochia scoparia* and *K. trichophylla*. I have grown the two side by side and have been unable to detect any difference. The appearance of the seed may mislead some as it is covered with a star-shaped hull which some growers, especially the foreign ones, leave intact. I presume the names Mexican Fire Plant and Ball of Fire are originations of the fertile imaginations of catch-penny advertisers. However, it is a beautiful plant and worthy of general cultivation as it grows rapidly and can be trimmed to any form without injuring it in the least.

Yours very truly,

P. K. NOTT.

Watervliet, N. Y.

MOVEMENTS OF GARDENERS.

Wm. H. Witte has taken a position with Jesse P. King, Mt. Airy, Md.

John Larsson, formerly assistant gardener at the Profile Gardens, Franconia, N. H., is now on the Thomas Plant estate at W. Manchester, Mass.

NEWS OF THE CLUBS AND SOCIETIES

NORTH SHORE HORTICULTURAL SOCIETY.

The annual rose show of this society was held July 10th and 11th, in a tent on the grounds of the Essex County Club, Manchester, Mass. The orchid exhibit of Lager & Hurrell was one of the features of the show and included cattleyas, laelias, oncidiums and vandas. Blue Hill Nurseries staged lilioms in variety and *Alstroemeria aurantiaca*. H. A. Dreer showed *Lobelia Kathleen Mallard* and *Nephrolepis Amerpohlil*.

The J. H. Troy cup offered for the best collection of roses was won for the third time by Fred Brasch, gardener to Mrs. James McMillan and becomes his property. The silver cup offered by Connolly Bros. for the best group of foliage and flowering plants was won by Eric Wetterlow, gardener to Mrs. Lester Leland. The Julius Heurlin cup offered for the best collection of herbaceous perennials was won for the second time by William Swan, gardener to Mr. R. C. Hooper. This cup has to be won twice. James Salter, gardener to Mrs. Philip Dexter won the silver cup offered by Schlegel & Fottler for the best collection of vegetables, and William Irwin, gardener to Mrs. Gordon Abbott, won the first prize for best collection of vegetables, offered by Morley & Flatley Co.

The judges were Messrs. E. O. Orpet, Joseph Clark, Jr., and James McGregor.

The committee in charge of the show consisted of John Baker, Thos. Jack, Walter E. Allen, William Till, James Salter, secretary.

WILLIAM TILL.

ST. LOUIS FLORIST CLUB.

A very interesting and well attended meeting was held last Thursday afternoon. After all the regular opening work had been attended to, the several committees made their reports. W. C. Smith reported for the trustees that they had made all arrangements for the picnic to be held next Thursday at Romona Park. William C. Young, State vice-president of the S. A. F., reported on transportation to Philadelphia, after which the members voted to go by the Pennsylvania R. R. Aug. 18th arriving in the convention city Monday at 3 P. M. The fare for the round trip will be \$25.00, which includes a visit to the Jamestown Exposition, with return by way of Washington, D. C., by boat. Mr. Adolph Brix, a retailer, was elected to membership in the club.

Officers for the ensuing year were nominated as follows: President—W. C. Young, John Cannon and John Steidle; vice-president—George Augermüller and Edwin Denker; secretary—A. J. Bentzen, treasurer—H. C. Irish, trustee, three years—Y. H. Pring and Charles Schoenle. The election will take place at the August meeting, when other nominations can be made.

President Irish announced that an invitation had been extended by Director Wm. Trelease to have the next regular meeting at the Missouri Botanical Garden, which was accepted. This meeting will be on Thursday afternoon, August 8th.

The question box contained some

very choice queries. Information as to dahlia culture lead in the discussions.

AMERICAN ROSE SOCIETY.

The executive committee of the American Rose Society will hold a meeting at the Hotel Martinique, New York, on July 24th, to prepare a preliminary schedule for the coming exhibition in Chicago, 1908.

There are prizes already offered by W. A. Manda, Orange, N. J., \$25.00— and \$25.00 for "La Detroit" and special prizes of \$200.00 and \$100.00 for plants in pots. President Robert Simpson is planning for a European trip of some extent, to leave this country on the last of the month. At this meeting a certificate for new varieties will be decided upon, also a certificate for life membership.

In some of the Hudson River towns the Crimson Ramblers have been used the past few years as piazza plants and the spread of this beautiful flower has in some places made a marked impression upon the value of the rose as an outdoor decorative plant.

BENJ. HAMMOND, Secretary.

Fishkill-on-Hudson, N. Y.

NEW BEDFORD HORTICULTURAL SOCIETY.

At a special meeting of the New Bedford Horticultural Society, on last Tuesday evening, it was decided to hold a horticultural exhibition in Odd Fellows Hall on August 27, 28 and 29, when the city of New Bedford will devote a week to rejoicing over the visits to the old home of her wandering children.

It was decided to offer a silver and a bronze medal for the best floral display in the trades' parade.

James Garthly, of Fairhaven, exhibited some superb specimens of stocks—Beauty of Nice and Farquhar's Giant.

NEW LONDON COUNTY HORTICULTURAL SOCIETY.

The exhibition at Norwich, Conn., by this society was a success in point of size and excellence. Otto Ernst, S. J. Reuter, the Geduldig estate were among the principal commercial exhibitors of plants and flowers. J. P. Sorenson showed fine Hamburg grapes and cucumbers. The private estates of New London and adjacent places were well represented.

CLUB AND SOCIETY NOTES.

The eighth annual meeting of the Texas Nurserymen's Association will be held at College Station, August 23, 24, 25.

The next meeting of the Albany Florists' Club will be held at Slingerlands, N. Y., with Fred Goldring, on August 1.

The Utica Florists' Club, N. Y., held its meeting on July 11 at Ilion with Theodore Schesch, who entertained them at the Beethoven Maennerchor Hall with a turkey dinner.

The Elberon Horticultural Society will hold their second annual flower show in the New Casino, Long Branch, N. J., on July 24 and 25. The prize list is now ready and includes 36 prizes.

NEWPORT HORTICULTURAL SOCIETY.

The rose show of the Newport Horticultural Society was held on Tuesday and Wednesday, July 9th and 10th in Masonic Hall. It was successful as a rose show and as an exhibition of plants, although it has usually been the case that no special effort was made to make the June show as it has been called anything much but a rose and strawberry show. This year strawberries might just as well not have been mentioned in the schedule for all that the show was helped by them, in fact there was only one exhibit but it was a good one from Samuel Speers. Roses were much later this year than for many years past hence the cause of the postponement of the show from June 26 to the date on which it came off.

The center of interest this year at the show was the class for a collection of roses for prizes offered by S. G. Harris, Tarrytown, N. Y. For this prize there were three exhibits staged, that of James Robertson was far ahead of the other two both as a collection and in quality of blooms. Hugh Williamson took second and Alex. Adam third. In the class for a display of roses Colin Robertson was easily first and John Marshall, second.

In the smaller classes for roses James and Colin Robertson were pretty nearly even in honors with the advantage slightly in favor of the former who had on exhibition as fine blooms as were ever seen in Newport. The plant classes were fairly well contested all through and the class for table plants keenly. There were four exhibits staged in this class and the judges had hard work to decide which were the best three.

The groups of plants were effectively done especially those of Colin Robertson the winner in both classes for groups.

Crotons and dracaenas were well shown; palms were excellent in color and of immense size. Specimen ferns were in good shape; *Nephrolepis Whitmanii* took first and second; this fern also took first in a fern dish. Made up work of cut flowers was not largely in evidence. F. L. Zeigler had a show basket of Jack roses which took first in its class.

Henry A. Dreer had on exhibition the new double *Lobelia Kathleen Mallard*. This will without any doubt catch on quickly as it is a thing nearly every one can make use of one way or another, it will be good for bedding and good also as a pot plant. The same firm had on exhibition *Nephrolepis Todeaoides* and *N. Amerpohlil*, both distinct and possessed of superior merit and attractiveness.

Julius Roehrs has as usual a catching display of decorative foliage plants. This firm had also a number of good plants of *Lobelia Kathleen Mallard* so that it will be seen that more than one firm has stock of this novelty to offer.

Messrs. Lager & Hurrell had a collection of orchids which attracted

The Dreer trial grounds at Riverton are always interesting to the visitor and are especially so during the summer when the perennials give a constant succession of daily variety. The collection embraces over two thousand species and varieties.

Lineariloba is a good addition to the callirhoe family. It has delicate light rose flowers constantly in bloom and makes a fine companion for the old favorite *involucrata*.

In the bergamots the variety Cambridge Scarlet is noticeable for its handsome crimson-scarlet flowers. This variety makes a fine show during July and August.

The new strain of *Pentstemon*

SOME NEW HARDY PERENNIALS.

called *Sensation* is truly a sensation in the variety, size, and loveliness of the flowers which run through crimson, purple, lilac, rose and cherry, most of them beautifully marked and sprinkled. This rivals the hardy phlox as a compact and showy bedding plant. Unfortunately it is not quite hardy here and must be given some protection during winter.

The bell flowers are a large family and well represented here although we did not observe any that were especially new or striking. The variety *Alliarifolia* with its nodding bells is among the most effective. *Lactiflora* is also a good one with large spikes of flowers white tinted blue. Among the blues the variety *trachelium* shows up well. The *platycodons* are closely allied to this family and form an attractive patch close by.

Scabiosa caucasica, also not new, is one of the most charming of hardy perennials its lovely lavender flowers being peculiarly beautiful. Besides this it has fine long stems and blooms all summer. In this connection we can recommend another good one namely *Physostegia virginica grandiflora alba*, a fine mouth filling name truly but a beautiful plant notwithstanding this tough handicap. The spikes of pure white tubular flowers might not inaptly be likened to a giant heather.

There are number of new ones among the Mule Pinks this year. *Delicata* is a soft rose and beautifully fringed; *Comet*, a rosy crimson—a fine bright flower; *Superba*, a pale pink with maroon center; *White Reserve*, white—nicely fringed; but the gem of them all is still the older

Scabiosa caucasica.

variety *Napoleon III* whose brilliant crimson crest is still to us "a thing of beauty and a joy for ever."

Although *Romneya Coulteri* and *Delphinium formosum* are not new we cannot refrain from an appreciative word for these two fine subjects as we pass then on our way to the tritoma field where one or two of the new ones have already commenced to flower. The most striking of this year's introductions is *Erecta* which is unique in having the florets of the lower half of the spike standing erect. *Saundersi* is a massive flower of a deep rich color. We hope to say something of the merits of the thirty or forty other varieties of tritomas at another time. It is too early for most of them yet.

The much-heralded *Astilbe Davidi* was in bloom. While it is a good thing we think it has been overpraised. The color is not clear. *Venusta* shows up brighter and better.

G. C. WATSON.

Physostegia virginica.

much attention especially of those of the four hundred visiting the exhibition.

Rose Show Principal Awards.

Class 1. palms and potted plants. 1st, Colin Robertson, gard. for Mrs. Robert Goelet; 2nd, James Boyd, gard. for Mrs. Astor.

Class 2. Palms, ferns and flowering plants. 1st, Colin Robertson; 2nd, James Boyd.

Class 3. Table of Decorative foliage plants. 1st, David McIntosh, gard. for Mrs. Bell; 2nd, C. D. Stark, gard. for Mrs. Colliard; 3rd, James Boyd.

Class 4. Display of orchids. 1st, C. D. Stark.

Class 5. Specimen *Arauc.* 1st, Colin Robertson; 2nd, C. D. Stark.

Class 6. Specimen *Kentia*. 1st, Colin Robertson; 2nd, C. D. Stark.

Class 7. Any species palm. 1st, C. Robertson; 2nd, C. D. Stark; 3rd, F. J. Zeigler.

Class 8. Specimen fern. 1st, C. Robertson; 2nd, James Robertson, gardener for Mrs. Richardson; 3rd, James Boyd.

Class 9. Rex Begonias. 1st, James Boyd.

Class 10. 6 Gloxinias. 1st, Paul Volquardson, gardener for Mrs. Wm. G. Weld; 2nd, James Robertson.

Class 11. 6 Crotons. 1st, Colin Robertson; 2nd, David McIntosh.

Class 12. 6 Dracaenas. 1st, David McIntosh; 2nd, C. D. Stark; 3rd, James Boyd.

Class 13. 6 Tuberous Begonias. 1st, Paul Volquardson, 2nd, John T. Allen, gardener for Mrs. John R. Drexel.

Class 14. Specimen *Pandanus*. 1st, C. D. Stark; 2nd, James Boyd; 3rd, David McIntosh.

Class 15. Dish of ferns. 1st, James Robertson.

Class 16. Dish mixed ferns. 1st, James Robertson; 2nd, F. L. Zeigler.

Class 17. Dish of foliage plants. 1st, C. D. Stark; 2nd, John Marshall, gardener for Hon. Perry Belmont.

Class 18. Decorative foliage plants, prizes by H. A. Dreer Co. 1st, David McIntosh; 2nd, C. D. Stark.

Class 19. Collection of out-door roses. 1st, James Robertson; 2nd, Hugh Williamson, gardener for W. W. Astor; 3rd, Alex. Adam, gardener for Alfred G. Vanderbilt.

Class 20. Display of roses. 1st, Colin Robertson; 2nd, John Marshall.

Class 21. Fancy basket of roses. 1st, F. L. Zeigler; 2nd, John Marshall.

Class 23. 12 varieties H. P. roses. 1st, Colin Robertson.

Class 24. 6 varieties H. P. roses. 1st, Colin Robertson.

Class 25. 12 H. P. roses pink. 1st, James Robertson; 2nd, Colin Robertson; 3rd, John Marshall.

Class 26. Red H. P. roses. 1st, Colin Robertson.

Class 27. 12 white H. P. roses. 1st, James Robertson (with Frau Karl Druschki).

Class 28. 12 H. P. roses, any varieties. 1st, James Robertson; 2nd, Colin Robertson; 3rd, John Marshall.

Class 30. 12 Hybrid tea roses. 1st, John Marshall; 2nd, James Robertson.

Class 31. 12 Tea roses. 1st, Colin Robertson.

Class 32. Basket of roses by gardeners.

assistants. 1st, Angus Allen; 2nd, H. G. Christian; 3d, Wm. Fricker.

Class 35. Bunch black grapes. 1st, David McIntosh.

Class 37. 6 nectarines. 1st, James Robertson; 2nd, John Marshall.

Class 40. Dish strawberries (Marshall). 1st, Samuel Speers, gardener for Prof. Greene.

Class 42. Dish strawberries (Brandywine). 1st, Samuel Speers.

Class 43. 12 tomatoes. 1st, James Boyd; 2nd, Stewart Ritchie.

Class 47. Collection of vegetables. 1st, Stewart Ritchie; 2nd, James Robertson.

James McLeish exhibited grapes and nectarines of good quality but not in competition.

Stewart Ritchie exhibited carnations and sweet peas.

John Marshall, carnations and *Dianthus barbatus*.

Paul Volquardson, roses, *Gruss an Zabern* and *Trier*; was awarded bronze medal for former and certificate for the other. The same exhibitor had a vase of superb Frau Karl Druschki.

John T. Allen exhibited a fine lot of tuberous begonias.

C. D. Stark, cypripediums and fancy colons.

Visitors included Messrs. S. G. Harris, John S. Hay, Thomas Knight and George H. Struck.

The judges were John T. Allen, Alex. MacLellan and Daniel Coughlan.

During the forenoon of the first day the judges, visitors, and others were entertained with dinner at the Perry House. D. M.

TWO ANDEAN ORCHIDS.

For beauty, variety, and natural interest combined the orchids surpass every other family of flowering plants. No other group approaches them in brilliant, singular and various coloring, in exquisite, graceful or sculptural, or fantastic form of flower, in peculiarly rare and delicate beauty of our native kinds—as *Arethusa*, *Calypso*, *Calopogon*—or in the remarkable relations which the flower has established with the insect world. Only two other great natural families equal this in number of species, for the orchids of the globe embrace some seven or eight thousand kinds already described and named by botanists, and are thus more numerous than all the species of flowering plants known to Linnaeus. They inhabit all quarters of the globe from Alaska, Iceland and Siberia to the equator and beyond to antipodal cold; but they are most at home in the hot and damp tropical belt, especially in the rain forests of tropical mountain ranges. Here they diversify themselves endlessly and display to perfection that remarkable adaptability which to some observers seems akin to our own rationality.

Charms of the Small Flowered Orchids.

The popularity of orchids in fine greenhouse collections is due to floral beauty. Few pursuits can afford the lover of rare and beautiful plants greater delight than the collection and cultivation of vandas, dendrobiums, calanthes, odontoglossums, etc. Here and there, however, we find one who extends his search beyond the large-flowered forms to those which are smaller and perhaps rarer, and exert a different charm. To such a plant lover the unexpected and curious is apt to appeal strongly, especially if joined with winning floral qualities. Consequently, some large collections include not only showy species, like the cattleyas, but those of more lowly station and of less fame with the florist, known and admired chiefly by true orchid amateurs,—among which are the *Masdevallias*. The plants are small, some of them tiny, and tufted. They are native of South America and are hard to grow well in our climate, since they naturally inhabit the forests and rocks of the Andes, where the temperature in the open sun is very high, while shade leads to rapid cooling and the night temperature may be comparatively low, and where the mountain winds give good aeration at all times—conditions quite the reverse of greenhouse climate during our American summer. The flowers are in a few species brilliant, in many delicately beautiful, and in all very curiously formed. The number of species is large. The activity of the flower in two of the species—the subject of the present sketch—is most remarkable.

Where *Masdevallias* Thrive.

Masdevallia muscosa and *M. Xiphères* have recently bloomed in the greenhouse at North Easton and I have had an opportunity to watch their behavior. In their native Columbian forests they grow upon limbs of trees, on rocks, and sometimes among the mosses of the forest floor. Frequent rains keep them well-watered in the wet season, even when they are

seated upon naked treetrunks or barren rocks, while at all seasons of the year the nightly dew-falls are copious. The roots are spongy and rapidly soak up water-supplies when available, while the leaves are rather thick and act as reservoirs. There is thus no occasion for employing that remarkable power popularly ascribed to tree-dwelling orchids, of condensing and absorbing water vapor from the air—a power which, in fact, they do not possess. In nature only the rains and dews make it possible for “air plants” to thrive.

The Mossy *Masdevallia* (*Masdevallia muscosa*) is so named I suppose for the shaggy and moss-like flower-stalks. The flowers are golden, their stalks light green, the foliage is dark green, and the little plants must be particularly pretty as they stand in the sun in nooks of the lava-walls of mountain ravines, 6000 to 8000 feet up on the slopes of the Andes. The three sepals are joined at the base into a triangular chalice, which includes the two narrow petals and the column. The lip is pendant from a point within the lower margin. It has a thin high crest running lengthwise, and an expanded extremity beset with tufts of maroon hairs. If now, when the flower is open, the crest of the lip is touched ever so slightly, even

stroked with a hair, it begins instantly to close up, first slowly, but after two or three seconds flying up with a sudden snap. The shut lip exactly closes the opening of the triangular cup, as shown in the upper flower of the drawing, except at the top, where the ends of the petals and the column protrude somewhat, and moreover leave a small opening. After a period of twenty minutes more or less, if the lip is not further excited it begins to open and slowly falls to its former position, when it is ready to be sprung again. I set the lip of one flower off repeatedly during a day or two, and it lost none of its sensitiveness; in fact it recovered rather more quickly at the end of this time.

A variety of stimuli besides touch were found to cause the movement. On taking the plant out of doors, into air of about 46 Fah., the lip promptly closed. A hot needle brought near the cushion had the same effect. Most curious of all, about an hour after nightfall the flower closed (although darkening during the day was ineffective), and remained so until an hour or more before light next morning, when it opened of its own accord.

Fertilization by Means of Insects.

Only the ridge or crest of the lip is sensitive and must be touched, and

100 Trains Daily

JOSEPH HEACOCK CO.,Clean, Thrifty Stock
Our Specialty

in the wild state this can generally happen only when an insect has alighted upon the lip itself. By the spasmodic motion the visitor is raised and then hurled forward into the cup. When he picks himself up he finds that he is imprisoned in a chamber with translucent golden walls, veined with red. Whether the elegance of this prison appeals to him or not must be left to comparative psychology. Escape is suggested by light from a small aperture above him; and as he crawls upward and out between the petals and end of column he almost unavoidably removes the pollen masses, which he carries to the next flower. The stigma of the next flower receives the pollen of the first as the insect again makes his escape, and so cross-fertilization is secured.

The stimulus leading to movement is received by the sensitive ridge of the lip; but the motion is executed by a hinge situated at a little distance. There must therefore be transmission of the stimulus through the tissue of the lip. This is comparable to the transmission of sense-impressions and impulse through nerves in animals; though in the plant there are no nerves, as a microscopic examination shows. Yet the transmission is very rapid. The movement is actually caused by the contraction of masses of cells on the upper surface of the hinge, which play the part of a muscle. The analogy between plant and animal physiology is here very plain.

The reception of stimulus with transmission of the effect through the tissues and resulting motion of parts is common in plants, though since the movements are usually too slow to catch the eye, the fact is not generally suspected by those who have not paid particular attention to the matter.

The second plant to bloom is a very nearly related species, with reddish instead of yellow flowers, *Masdevallia Xiphères*, also from Columbia. Its power of movement might be predicted from the similarity of the bloom to that of its congener. Yet so far as I know its actual possession of the faculty has not heretofore been reported, probably because the plant is rare in cultivation. It behaves precisely like its relative. The ridge alone is sensitive, and the lip is quite as quick in its motions. The flower-stalk is declined, however, and the flower being almost inverted, the imprisoned insect has only to walk down

and out, effecting the pollination of the flower by passing over the stigma, as in the preceding species.

Ames Botanical Laboratory,
N. Easton, Mass.

A HYBRID IRIS.

This hybrid Iris is the outcome of crossing *Iris paradoxa* and *Iris sambucina*, hence the name *para-cina*. It was one of the late Sir Michael Foster's hybrids, but has come into the hands of Messrs. Barr and Sons, King Street, Covent Garden, for distribution. The standards are dark violet, and the white falls are heavily veined. It received an award of merit at the meeting of the Royal Horticultural Society on June 11th.

Messrs. Barr, we are informed, have a number of plants of this pretty new hybrid. In the *Oncocyclus* species, *I. paradoxa*, the falls are very narrow, while the standards are large (hence its name of *paradoxa*, referring to these differences). In *sambucina*, a bearded species native of Central Europe and Asia Minor, the fall is well balanced and large.—*Journal of Horticulture*.

PUBLICATIONS RECEIVED.

Part II of the Transactions of the Massachusetts Horticultural Society for the year 1906 has come to hand. As usual it contains interesting reports of the various exhibition committees, etc., together with accounts of the progress of the school garden movement in Massachusetts accompanied by illustrations of some of the children's gardening work.

The Year Book of the Department of Agriculture for 1906 which has just come to hand is a volume of over 700 pages and compares favorably with any of its predecessors in the value of its contents. It is copiously illustrated, the frontispiece being a portrait of the late Henry Cullen Adams of Wisconsin. There are several colored plates of new fruits. Much space is given to the problems connected with injurious insects and, in connection with some recent utterances in HORTICULTURE, it is especially interesting to learn that up to date 57 species of birds have been found to feed upon the various scale insects.

NEW YORK

ROSE NOTES.

Marco, a new Wichuraiana rose, belongs to the Tea-scented section, is of good form and double, orange-red in color. M. Guillot is the originator.

Rosa rugosa Roseraie de L'Hay, semi double, deep brick-red, raised by Graverian in 1902 and disseminated by Cochet is well recommended as a hedge or border plant by the Gardeners' Chronicle. It is said to bloom abundantly throughout the summer.

Rose Paul's Carmine Pillar has made a new record for itself this season, coming through the hardest winter on record, in the vicinity of Boston with but few scars and producing a remarkable crop of bloom which extended over most of June and early July.

Whatever may or may not be said favorable to the so-called baby Rambler as an Eastern forcing plant, certain it is that it cuts a sorry figure with its lifeless color even at its best when in the garden contiguous to Crimson Rambler, and when the flowers have become old their habit of persistence and fading out on the plant gives them a very unattractive appearance.

Wellesley proves to be one of the hardiest as well as one of the most profuse flowering of garden roses adapted to the climate of Massachusetts. It withstood the severe winter of 1906-7 in even better shape than did Killarney, which is already recognized as a gem among ever-blooming hardy roses. Wellesley is a very rapid grower, and flowers follow one another in rapid succession all through the summer.

SHRUB CHAT.

A writer in The Garden speaks very highly of Rose Hugonis, a species of which seeds were received from China at Kew. It is described as a shapely bush of at least six feet in height and bearing yellow flowers two inches in diameter. This species may prove valuable as a pollen bearer.

Among the flowering shrubs seriously injured by the severe weather of the past winter may be mentioned Clematis montana, which last year bore a profusion of flowers, but this year none, not only the buds but much of the wood being killed outright. With this little demonstration of its unreliability under certain conditions, Clematis montana is yet handsome enough when it does come to make it well worthy of a place among the desirable climbing shrubs.

BOSTON HEAD LETTUCE.

The illustrations used here are from pictures taken on the market garden farm of Dell Titus, the largest grower and dealer in Boston Head lettuce, in

the garden district of Irondequoit, N. Y. Mr. Titus has methods of preparing and of applying water to the soil entirely his own, and thereby manages to keep his plants fairly free from disease. In the case of the greenhouse crop, as the lettuce is removed pretty well toward spring, but long before it would be safe to plant cucumbers out-

doors, the beds are then planted with cucumbers, which also find a ready sale on the Rochester market, being, of course, ready for market weeks before the first outdoor product comes in. As to the outdoor crop, the land here is required to produce three crops a season.

H. R. PEACHEY.

CATALOGUES RECEIVED.

C. Betscher, Canal Dover, O. Special list of Peonies. All guaranteed to be true to name.

Micell's "Special Advance" Wholesale Bulb Catalogue.—H. F. Micell Co., 1018 Market Street, Philadelphia. With the catalogue goes a special invitation to visit the large model seed and bulb establishment of this company. A feature of the Micell Company's business is its special attention to the florist trade.

Three roses for a penny and half a pineapple for a penny are quoted as street seller prices for the last week of June in London.

NEW BABY SMILAX

(Myrsiphyllum Asparagoides Myrtifolia)

The old well-known Smilax has a rival in this new variety.

It is of a delicate and handsome appearance; the individual leaves are only one-half as large as the regular Smilax, and as graceful as the Maiden Hair Fern.

It is advisable to allow each plant several strands of twine on which to run. It is a very rapid grower, and produces many more shoots than the old variety of Smilax.

NEW CROP JUST RECEIVED:

HENRY F. MICHELL CO.

1018 Market Street
PHILADELPHIA - - PA.

OUR FRONTISPIECE.

The subject of our frontispiece this week is a very complete and compact range of iron frame houses of Lord & Burnham construction. The large house in the rear is the palm conservatory. The large curvilinear house on the left is devoted to grapes and peaches, and the corresponding one on the right to fruits in pots. The carnation house appears between these two, while further back are houses with compartments for orchids, ferns, vegetables, etc.

The plant is considered a model in all respects. It is on the estate of Miss E. J. Clark, Pomfret, Mass. It is presided over by John Ash, well known to frequenters of the Massachusetts Horticultural Society's exhibitions in Boston as an expert grape grower and winner of first prizes in many of the flower and fancy fruit classes.

ALL GIANTS are used in mixing our PANSY SEED

"BODDINGTON'S CHALLENGE" mixture contains all the finest Giant strains—of the leading Pansy Specialists in the world—the Giant self colors, the Giant striped and margined, and the Giant blotched—all carefully mixed in proportion—the finest that money can buy—the finest your money can buy. A florist who has grown it, said "Why don't you call it *Defiance!*"

Trade pkt. 75c, 1-4 oz. \$1.50, 1-2 oz. \$2.75, oz. \$5.00. New crop ready July.

PEONIES IN 1907.

Much pessimistic talk has been indulged in this year on the peony question from the commercial standpoint. It has undoubtedly been a disastrous year for the cut flower crop on account of the lateness of the season. Our visit to the Dreer peony farm in 1906 took place May 29th, while this year the flowers were not at their best until June 19th, exactly three weeks later. This eliminates the late May and early June cut-flower trade, which means everything to those who grow for the flowers alone. But the situation is not so bad for the large seed and nursery concerns, whose main dependence is on the sale of roots in the fall and spring.

The Dreer peony farm, of which a view is given on this page, covers nearly ten acres with over 160,000 plants from two to five years old and also a considerable acreage of one-year plants. The collection embraces about 100 of the best and most distinct varieties. The nomenclature question has received great attention here, and the years of hard and painstaking work are now bearing fruit.

A number of new varieties have been added since our comments last year, but not of sufficient importance to go into at this time. Interested readers should refer to our issue of June 9th, 1906, for a review in detail of the most striking varieties.

RICHMOND ABROAD.

The colored plate of rose Richmond, sent out with The Garden for June 22, does not do justice to this grand rose as we are accustomed to see it in this country, either in color or in vigor of growth. Indeed, the stems as shown would not gain admittance to the No. 2 class as these roses are graded in American cut flower markets.

THE PEONY.

Address of J. Elliot Colt before American Peony Society, Ithaca, N. Y., June 27, 1907.

Gentlemen:— Up to the middle of the 19th Century the only peony which was known to any extent in America was the old double red of our grandmothers' gardens. It was comparatively common throughout the extent of the Atlantic seaboard, and its large vivid red blossoms with their disagreeable soapy odor were familiar to everyone. Even to the present day this flower comes into the mind of perhaps the average American when the peony is mentioned. For various reasons this old peony was looked upon as a vulgar, indelicate and unrefined flower, and while it was tolerated in the yards of the common people, it was rarely if ever given a prominent place in the collections of wealthy and discriminating flower-lovers.

However, a great change in sentiment was destined to take place, and this was brought about by the introduction of the species *Paeonia albiflora*, popularly known as Chinese or *Chinensis* peonies. This species bore single white flowers with many buds upon a single stalk. Under the stress of cultivation by the Chinese and later by M. Lemon, Victor Verdier, M. Guerin and others of France, it sported into many shades of red and all degrees of doubleness. It possessed all the beauty of the old *officinalis* type and also combined fragrance with great hardiness. I consider the species *albiflora* therefore as responsible for the great wave of popularity which the peony has undergone, and as evidence I offer the fact that the vast majority of the popular varieties on the American market today belong to this species or contain a large share of *albiflora* blood.

Peony History.

The history of the peony previous to

1650 should be treated in two parts, for before that date the peony of the Greek and Latin literature was the *Paeonia officinalis* which is wild in Southern Europe. The ancient history of *P. moutan* and *P. albiflora*, however, lies entirely in China and Japan, as previous to 1656 neither of these species were known to Europeans.

It is the species *P. officinalis* which probably secured for the genus its name. The genus *Paeonia* was so named by the ancients in honor of Paeon, a physician, who cured the wounds received by heathen gods during the Trojan war. Antiquity celebrates the virtues of this plant and places it among the wonders of the vegetable creation. Fable gives us its origin, Aesculapius its properties, and superstition ranks it among miraculous plants, assuring us that demons will fly the spot where it is planted, and that even a small piece of root worn around the neck is sufficient to protect the wearer from all kinds of encroachment.

The Tree Peony.

In A. D. 536, the Chinese in a general way distinguished two kinds of peonies: the Sho Yo or common kind which is known as *P. albiflora*; and the Mew Tang (Mow Tan) or improved kind which we recognize as *P. moutan*. In their flower gardens, the moutans claimed first place in point of beauty, and the Sho Yos took second place. For this reason the former were often called Hwa Wang, "King of Flowers," and the latter Hwa Seang, "The King's Ministers." I am indebted to an ancient Chinese horticulturist, Hung King, who wrote in 536 A. D., for the information that the original native home of the tree peony is the valley of Pa Keun, in the district of Hang Chung, in the easterly part of the province of See Chuen, together with the neighboring south part of Shen Se, or the country about the two rivers Kea Lin Keang and

ony Farms

Han Keang. In 656 A. D., Soo King, another writer, announces Hang Chung as the native home of the tree peony, thus corroborating the account of Hung King in 536. I go into this matter thus fully because it has been repeatedly stated in print that the feral home of the tree peony is not known. Robert Fortune himself states in 1830 that the tree peony may be found on the mountains of the central provinces of China.

An old Chinese book on the "Origin of Matter and Objects" states that by 713 the number of kinds had so greatly increased that the plant was common about the huts of the poor as well as about the mansions of the rich. Soon after this, about 720, eleven hundred and eighty-seven years ago, the number of kinds had so greatly increased that Gow Yang Sew established a genealogical register in which to record the characters, qualities, and parentage of the kinds which came from seed. So we find that our efforts to establish a register for our varieties of peonies are by no means original, but we must take off our hats to our friend, Mr. Gow Yang Sew, whose efforts along this line antedate ours by 1187 years!

In 1656 the Dutch East India Company sent an embassy to China which secured free access to that country, and in the published accounts of this embassy the peonies were described in glowing colors. To make a long story short, Sir Joseph Banks of England became interested in these accounts and after various unsuccessful attempts succeeded in 1794 in introducing into England two living tree peonies. Progeny of these plants were later introduced into France, and Mons. Noisette, a nurseryman of Paris, distributed them throughout the country.

Albiflora History.

The early history of albiflora is very similar to that of the moutan except that it was indigenous to a very wide

range of territory in Northern China and Siberia. As far as I have been able to find, the variety *Fragrans* was the first albiflora to find its way into Europe, and it was brought from China by Sir Joseph Banks in 1805.

Peonies of various kinds were introduced from China into Japan in 724 A. D., and were subsequently greatly improved by the Japanese. Peonies were first introduced into America by William Prince of Flushing, Long Island, soon after they reached England. McMahon speaks of them in 1806, and in 1824 Mr Prince had a collection of over forty varieties. Some twenty other species have been introduced at various times during the past century, but they are of minor importance. Only one species (*P. Brownii*) is native to America, and that we find in California. It is of value solely as a botanical curiosity.

I have not attempted to work out the botany of the peony for two reasons. In the first place, three or four monographs of the genus have already been published; and in the second place, the type specimens of the species are all in European herbaria and it would be useless for me to attempt a botanical monograph without making an extended trip to Europe.

Evolution.

Certain it is that the magnificent, large, fragrant blooms which appear upon our tables today are very unlike their wild prototypes which were introduced from Siberia. How has this vast improvement come about? What agencies have been at work. How are we to proceed to still further develop this wonderful flower? These are all pertinent questions, but their answers are not difficult to find.

There are three chief causes of variation in plants. They are: change in environment, change in food supply, and inter-crossing. Now the genus *Paeonia*, together with its relatives, is naturally variable in a wild state. In

addition to this, all three of these causes of variation came into active play when the peony was removed to Europe, where a totally different climate prevailed, and they were heavily manured by the French growers, and all of the species obtainable were planted together in botanical gardens and amateur collections, where they had every opportunity for inter-pollination. Many of the early growers cross-pollinated by hand to insure the production of hybrids. Even hybrids between the tree peony and the herbaceous sorts were secured. Small wonder, then, that the new generations presented striking and valuable variations, which were selected as parents for succeeding generations. Not only did the peony vary in color, size and odor, but, most important of all, it varied greatly in form; and, as a result, we have seedlings representing all stages of transformation from the simple single to the fully double. I find, after a careful study of the literature, that a great deal of confusion exists in regard to the names given to these horticultural types. Especially is this true in regard to the terms *anemone* and *artichoke*. For the sake of uniformity and a better understanding of each other's descriptions, I am therefore prepared to propose and define six horticultural types. I think these six types will fully cover the field and will be found to apply to all blooms existing at this time. These types are not ill-advisedly put forward. They have gradually grown and crystalized in my mind during a two years' study of the subject. For the terms employed, I am chiefly indebted to our worthy president, Mr. C. W. Ward.

Type I, the Single.

This type includes all peonies with a single row of petals, enclosing a mass of pollen-bearing stamens, and normal follicles. For the sake of an example, I mention *La Fiancee*.

(To be Continued...)

PREPARE FOR CHRISTMAS

Novelties always sell during the holidays. If you have not already grown them, try some Pink or Rose SPECIOSUMS. If potted in July will flower for Thanksgiving and Christmas. Always useful either for cut flowers or plants. Ask the leading florists in Pittsburgh, Cleveland, Detroit, Buffalo, or around New York City. Order today. Will ship any time. Cold storage Liliun longiflorums and giganteums take about two months to bloom from time of potting; speciosums from five to six months, so that longiflorums wanted for Thanksgiving and Christmas should be planted about Oct. 1, and speciosums in July.

FLOWER MARKET REPORTS

Business is very dull **BOSTON** here, worse, if anything, than at any previous time this season. "Carna' five a bunch—doz'n carna' fer fi' cen'" is the call on every street corner, and the street men are not doing a land office business at that. The growers, happy growers, are, most of them, either already away or getting ready to go—some of them abroad, others to rural retreats nearer home. Many retailers are likewise enjoying themselves. The wholesalers—well, they are always enjoying themselves, even when working their hardest. The undercurrent, through all departments, seems to give promise of a fine delegation from the Hub to Philadelphia next month.

Summer dullness has come upon us and trade is actually at a standstill. Stock came in in abundance the past week, especially in the carnation line, with very little sale. The customer makes no appearance, consequently the rubbish man gets two-thirds of the material. Roses are in good supply, Killarney leading. In pink Carnot and Kaiserin were fine, but Brides and Bridesmaids are poor in quality. Longiflorum lilies are in good supply, also candidum and rubrum. Sweet peas are overflowing.

Trade has quieted down and assumed the usual midsummer dullness. The weather has grown warmer every day, and as a result stock has shown plainly the effect. Tea roses are producing quantity, but are of the summer type. Beauties with good, clear foliage find good sale and are in fair supply. Quite a variety of garden flowers are to be had, with little or no sale. Gladioli, Lilium candidum and longiflorum are in good numbers, while asters are in limited supply only. Fine sweet peas are abundant at extremely low prices. Growers of bedding plants report the best spring trade in years. A visit to their places finds them well cleaned out.

Cut flower trade is only a memory now, the principal reminder of which is uncollected accounts which stare the dealer in the face every time he opens his books and which in a majority of cases are likely to stay on the ledger for many moons before they get their happy shift to the cash account. This is the toughest part of the flower business, "and that's no dream." Plenty of flowers—such as they are—make the daily trip from far and near and take their chances at a sale which, if it is consummated, may or may not cover the express charges (reduced or otherwise). All are hoping for a reduction of the shipments at one end or a resumption of demand at the other. One or both of these would be an im-

provement thankfully received in these blistering days.

There is little **PHILADELPHIA** change to report on the market here this week. The tone has improved somewhat, but this is rather to be attributed to the decrease in supplies than to any increase in demand. There are plenty of roses and carnations coming in, of the usual summer quality. In carnations, no really first-class stock is to be seen, but the quantity of seconds is more than the market needs. There is an unusual quantity of small subjects, such as achillea, feverfew, candytuft, sweet alyssum and such arriving. Asters have improved somewhat, there being some very good pinks now coming in, also whites, but the latter are rather short-stemmed. Red gladioli are plentiful, also sweet peas. It has been a fine season for sweet peas, and they are still very good. Lily of the valley is of fine quality and plentiful. The gardenia is down into the plebeian class now, but the stately orchid holds its own at normal figures with supply short enough to keep vulgar prices at a respectful distance.

NEWPORT NOTES.

The weather during the past five weeks has been favorable in the extreme to Newport as far as filling it up with summer people is concerned and that means more eventually than if the weather conditions had been more favorable for vegetation. It is quite hot here now; outdoor roses are in consequence all but over; florists were not able to utilize these to any appreciable extent this season. There is now a scarcity of outdoor flowers and the indications are that at no time will such material be over plentiful this year. With the cottages about all occupied and nearly every one of the prominent members of the four hundred among the occupants things look exceedingly promising for a good and profitable season for florists and growers. There are already many entertainments talked of for the near future and a few have already taken place. Gardenias will be scarce this season; there are few commercial growers engaged in growing these here and I think there are not many anywhere although there is no apparent reason why they could not be made fairly profitable.

All the florists are now firmly established at their several stands on the avenue and each one is seemingly putting forth his best efforts in window decoration. For a week or more F. L. Zeigler has as an attraction a dinner table with silver and other accessories prominent, showing a floral decoration of something new for each day. All the florists are still doing a large plant business and there are still many dwellings unsupplied with palms, bay trees, etc.

BUSINESS CHANGES.

Geo. A. Heintz has removed to 336 Superior St., Toledo, O.

Wm. Trillow of Des Moines, Ia., has leased the Lambert Greenhouses.

R. Dahn has taken over the business of Dahn & Ford at Auburn, N. Y.

Miss Riggall has succeeded to the business of Thomas Plumb on Yonge St., Toronto.

Andrew Frost has purchased the business of J. P. McCullough, 284 College St., Toronto.

Perkins & Nelson succeed Perkins & Schumann, as wholesale florists, at 55 W. 26th street, New York.

J. H. Seaman & Co., Washington, Pa., have bought the greenhouses of the Washington Floral Co., and will carry on the Forrest houses until December with George Garland in charge. Eighteen thousand dollars was the purchase price.

A GREAT SUPPLY HOUSE.

In many respects one of the most interesting and useful features of the S. A. F. convention at Philadelphia, from the florists' standpoint, will be the displays made by the Philadelphia plantmen, seedsmen and supply dealers at the trade exhibition and at their respective places of business. Among the supply men Bayersdorfer & Co. will surprise by the magnitude of their display. Mr. Bayersdorfer has just returned from Europe, and there is nothing worth having that he has not gathered together in the determination to stand pre-eminent on this occasion.

OBITUARY.

Sam Fine, a florist of St. Louis, Mo., 61 years old, died on July 8 at the City Hospital.

Nicholas Bartz, who established the first greenhouse in Des Moines, Iowa, died on July 15, aged 71. Two sons survive him.

Thomas Murphy, doing business as a retail florist on Ogden Avenue, Chicago, committed suicide on July 9. He was 50 years old.

A. J. Anderson, late gardener to Mrs. Thomas J. Emery, Newport, R. I., committed suicide on July 16. He leaves a widow and two children.

A. R. Congdon of Oberlin, O., died on June 29. Mr. Congdon had built up a successful business through his untiring energy and devotion and was highly esteemed.

Mr. E. A. Cannell, youngest son of Henry Cannell of Swanley, England, died recently, at the age of 40 years. He was a member of the Cannell firm. A widow and children survive him.

TELEPHONE CONNECTIONS.

PERSONAL.

C. W. Scott of Chicago was a visitor in Boston last week.

C. Campbell of Montreal is taking a two months' vacation in Scotland.

B. S. Slinn, Jr., wholesale florist, New York, who was obliged to go to Arkansas Hot Springs last spring has returned greatly improved in health.

Visitors in Philadelphia this week: President W. J. Stewart, Boston; Secretary P. J. Hauswirth, Chicago, of the S. A. F., and Fred. H. Kramer, Washington, D. C.

We are pleased to report that the condition of Supt. W. S. Manning of the Baltimore park department is favorable to an early recovery and release from the Johns Hopkins Hospital.

State Vice-President Pierce of Massachusetts is away on a short vacation. As soon as he returns watch for news of the trip from Boston to the S. A. F. convention, which opens Aug. 20 at Philadelphia.

SUCCESSFUL ROAD TREATMENT IN NEWPORT.

Newport never looked better than it does now and it would look still better if there had been a little more rain to freshen things up and aid the work of man in the adornment of the landscape. In years past there were continual grumbings heard because of the dust from the roadways, especially from Bellevue Ave. Last season, but too late to do much good, an attempt was made to remedy the state of affairs which gave occasion for these grumbings. Oil was sprinkled on the avenue and it did the work all right but it was very forbidding in appearance and odor. This year the street commissioner obtained a supply of what is known as dustoline from New Jersey where it had been used successfully last year. The application of this oily matter which is perfectly odorless has proved an unqualified success. It not only keeps the dust down but it also saves the road because it forms along with the coat of smooth stone put on with it a durable crust on the surface of the road.

CLUB AND SOCIETY NOTES.

The Indiana Horticultural Society will hold its midsummer meeting at Purdue experiment station, Lafayette, August 7, 8. Programs will soon be ready for distribution. H. H. Swaim, South Bend, is president; W. B. Flick, Indianapolis, secretary.

The fourth annual meeting of the American Breeders' Association is announced for January 28, 29, 30, in Washington, D. C. The American Carnation Society will hold its convention on the same dates, and some of the sessions will be held jointly with the American Breeders' Association

THE GERMAN APPLE DEMAND.

"Fine table apples for the German market should be selected from attractive varieties and good keepers," says Consul Bilttain, at Kehl in a report to the Department of Commerce and Labor. "They should be wrapped in tissue paper, then packed in fine excelsior, in boxes made from strong, light lumber. These boxes should be about 24 inches long, and from 12 to 14 inches wide, and sufficiently high for one layer of apples. Should two layers be placed in the same box, they should be separated by cheap cardboard and the second layer should be packed as the first. While this sort of packing may require a little more time, yet the extra expense will be slight and the seller will be duly compensated by the increase in the price of the fruit. Apples coming from France, running from two and a half to three to the pound, packed as described, sell for 5, 6 and 7 cents each—apples that are inferior to ours in appearance and flavor. The size and beauty of our finest apples would doubtless command a much higher price. No continental apples equal ours in flavor or appearance. At present American apples of the common grades, packed in boxes or barrels, sell at 10 to 12 cents per pound. We must pay more attention to the manner of packing merchandise, especially perishable merchandise, if we wish to capture the foreign market."

LIST OF PATENTS. Issued June 25, 1907.

- 857,684. Garden Implement. Charles S. Stevens, Conneaut, Ohio.
- 857,711. Harrow. Jesse E. Arnold. Hico, Texas.

- 859,881. Lawn mower. Alfred Hill, Denver, Colo., assignor to Kendrick & Hill Mfg. Co., Denver, Colo.

WASHINGTON FLORISTS' CLUB.

The Washington Florists' Club are to have an afternoon outing to the Great Falls on the Virginia side, on July 25th. All are looking forward with much pleasure to the event, as there will be sports of various kinds, and that added to the great beauty of the natural scenery ought to compensate all for their proportionate assessment, to say nothing of the dinner that will be served at the Dickey House. It is hoped there will be a full attendance.

During Recess

"Hang Sorrow" care will kill a cat
And therefore let's be merry."

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The annual club picnic will be held in Dorchester Park, corner of Dorchester Ave. and Richmond St., and Adams St., Dorchester, on Thursday, July 25. The park is easily reached by Ashmont and Milton electric from Dudley St. Station, or any electric running through Milton Lower Mills, the walk being only three minutes. Cedar Grove Station on the Mattapan branch of the N. Y., N. H. & H. R. R., is only ten minutes' walk distant.

A very attractive and valuable list of prizes has been entered for the 30 events on the athletic part of the programme. Entries are restricted to club members, their wives and families. Peter Miller will be official starter; Wilfrid Wheeler, official handicapper and the sporting committee consists of J. W. Duncan, Robert Cameron, H. M. Robinson, R. S. Edgar, James Wheeler, Wm. Davis, Wilfrid Wheeler, Peter Miller, Maurice Fuld and Duncan Finlayson. Sports will commence at 10 A. M. sharp. A cordial invitation is given to all who want to spend a thoroughly enjoyable day to be present. The commercial growers are hoping to regain their lost laurels in the tug of war contest, which the private gardeners are as intent on keeping. Great rivalry is promised in many of the sporting events and a record-breaking attendance is assured.

List of Events.

1. Base ball. Commercial and seed-men vs. private gardeners and park men. Nine pins. A. H. Hews & Co. Prize.
2. Base ball. Boys under 15. A. F. Scott prize.
3. Throwing base ball. A. T. Stearns Lumber Co. 1st, seamless ball, 2nd fountain pen.
4. 100-yard dash, handicap. R. & J. Farquhar Co. 1st, suit case; 2nd, 2 doz. oranges, 3d, cigar case.
5. 100-yard dash. Boys under 15. T. H. Westwood, prize, 1st, jersey; 2nd, base ball glove.
6. 100-yards dash. Girls under 15; W. H. Downs, prize, 1st, brooch; 2nd, brooch.
7. 100-yards sack race, handicap. K. Finlayson, prize, 1st, fishing rod; 2nd, cigar case.
8. 100-yard fat-men's race (over 200 lbs.) W. Sims, 1st prize; cuff links; Duncan Finlayson, 2nd prize, cuff links.
9. 50-yards race. Married ladies, Joseph Breck and Son, Corporation, prize, 1st, high grade hammock; 2nd, 1 case scissors.
10. 100-yards race. Ladies over 16, Robert Cameron, prize, 1st, camera (Brownie No. 2); 2nd, camera (Brownie No. 3).
11. 100-yards sack race. Boys under 15. Edward Hatch, prize, 1st, tennis racquet; 2nd, base ball glove; 3d, knife.
12. Potato race. Ladies, Thomas Roland, prize, 1st, hat pin; 2nd, hat pin; 3d, thimble.
13. 100-yard three-legged race. F. E. Palmer, prize, 1st, pocket knife (pearl handle); 2nd, 2 belts.
14. 240-yards run, handicap. T. J. Gray, prize, 1st, cup; 2nd, fountain pen; 3d, knife.
15. Quoit match. D. Iliffe, prize, 1st, razor; New England Nursery Co., 2nd, magnifying glass; 3d, pair quoits.
16. High jump. W. J. Stewart, prize, 1st, watch fob; 2nd, umbrella.
17. Long jump. Penn Co., prize, 1st, gold sleeve links; 2nd, umbrella.
18. Putting 16-lb. shot. Schiegel & Fottler, prize, 1st, (not specified).
19. Potato race. Boys under 10. J. Flood Co., prize 1st, Rugby ball, 2nd, base ball; 3rd, pair dumb bells.

25. 50-yard race, girls under 7. R. T. McGorum, prize, base ball bat.

26. 50-yard race, girls under 7. R. T. McGorum, prize, hair brush.

Base ball players among the club's members should send in their names to their captain, F. E. Palmer, Brockline, for the commercial florists and seedsmen, and Wm. Fischer, Union Terrace, Jamaica Plain, for the private and park gardeners.

PITTSBURG AND ALLEGHENY FLORISTS' AND GARDENERS' CLUB.

The annual outing and picnic of the club was held at Grove Park, Castle Shannon, Pa., on July 10th, which in spite of the somewhat threatening weather, and also of the fact that the affair was arranged in a hurry and members had a short notice, was fairly well attended. An early start was made by special train on the Pittsburgh & Castle Shannon Railroad, which is a narrow gauge road, one of the few remaining relics of primitive railroading in this country.

An elaborate program of sports and athletic events was arranged by the picnic committee, which was enthusiastically indulged in by young and old. A well-contested baseball game was won by the store men over the growers. Score 9 to

7. G. Ludwig donated nine knives for the winning team. The fat men's race was won by Wm. Hartlick, J. W. Ludwig being a close second. The rope provided for the tug-of-war team refused several times to stand the severe strain, precipitating the contesting teams ignominiously on the field. No other rope strong enough being procurable, the prize, a box of cigars, was divided between the teams. The \$5.00 gold piece donated by A. W. Smith for 100 yds. dash, open, was won by W. A. Carney. The ladies' races were closely contested, Miss Caroline Lease winning the young ladies' race in fine style. The 1st open race was won by Miss Carrie J. Smith.

Winners in the other events were: Girls, Lena Wooster; boys, Geo. McCallum; three-legged race, Messrs. Berring and H. S. man; bag race, Walter Berring; 100 yds. dash, for growers only, E. Hatch; broad jump, E. J. McCallum; 100 yds. back-walk, H. W. Carney.

PLANT GROWERS READ THIS:

Rutherford, N. J., June 26, 1907.

Messrs. W. W. Castle Co., 170 Summer St., Boston, Mass.

Gentlemen:—Your inquiry regarding the Circulators received, and in reply beg to say that the four Circulators now in operation have been more than satisfactory. We can give special commendation for the work you have rendered in connection with our old steam system, which heated at the time something like 30,000 sq. ft. of glass.

Since changing this steam system to a hot water system, it has not only taken care of the 30,000 sq. ft. of glass to our entire satisfaction, but we have been able to add several more houses and sheds to the system without the least trouble.

The piping in this range was very defective, and after the slight changes which were made, the Circulator now takes care of it all, and we would not want to be without it for five minutes in cold weather.

You may book our order for another Circulator which is to go on the battery of boilers under the packing shed, of which we spoke to your Mr. Congdon upon his last visit.

Very truly yours,

(Signed) JULIUS ROEHRS CO.

Since the above letter was written, Messrs. Roehrs have ordered two more boilers and circulators to be installed this summer.

Our Steel Plate Hot Water Boiler and Electric Circulator constitute

ANYBODY CAN MAKE A PRICE but it takes "know how" to make quality—and then *keep on making* that quality. You know well enough that quality is the only thing that there is to count on—price goes up or down like the mercury, while quality, if it is genuine H & Co. quality, remains constant. The question stands with us—not how to keep the *price down*, but how to keep the *quality up*. Now all this talk applies to everything we turn out, from the smallest casting to the largest greenhouses—H & Co. Quality from start to finish. You certainly want quality—so write us.

HITCHINGS AND CO.

GREENHOUSE DESIGNERS AND BUILDERS.
Manufacturers of Heating and Ventilating Apparatus.

1170 Broadway,

NEW YORK.

WE MAKE EVERY PART OF A GREENHOUSE BUT THE GLASS—WE SELL ANY PART.

Let us say it another way: We make at that immense plant of ours, at Irvington, N. Y., practically everything for your greenhouse, from L & B special putty to the "Burnham" Boiler. When you think it over, we are really running a Greenhouse Department Store, where you can buy from one concern, under one bill, a keg of putty and a few clamp bench fittings, or order a complete house, with all material, everything, even to the last coat of paint.

This Greenhouse Department Store buying has its strong advantages. First, you are absolutely certain of L & B quality and superiority throughout everything you buy, whether glazing nails or \$10,000 worth of Cypress Materials. You become an important customer of one concern, and have the assurance that they will take an interest in your requirements and give to you of their accurate knowledge and experience. Now it means all that and more when we say—and keep on saying as we shall from now on

WE MAKE EVERY PART OF A GREENHOUSE BUT THE GLASS—WE SELL ANY PART.

Lord & Burnham Co., Greenhouse Designers and Manufacturers, 1133 Broadway, cor. 26th St., N. Y. Boston Branch: 819 Tremont Building. Philadelphia Branch: 1211 Filbert Street.

Of course all kinds of questions come up in your mind when thinking about U-Bar construction. For instance; about palm houses: How does it work out for them? Well, here's an interior that carries its own argument! Could anything be more finished in its appearance or freer from the usual bunglesome parts? The U-Bars are of ample strength to support the 24 inch wide glass and its ornamental

dome. To further complete its perfect appointment all heating pipes are placed under the side tables and hidden from view by the grills. All metal parts are given a coat of aluminum paint, both for their preservation and perfection in finish. The catalog shows the exterior and plan of this palm-house conservatory. **Pierson U-Bar Company**, Designers and Builders *U-Bar Greenhouses*, Metropolitan Building, 4th Avenue and Twenty-third St., New York.

DO YOU NEED ANYTHING MORE TO CONVINCE YOU?

Read carefully this testimonial and those that we have already published. Don't Delay—Frosty Nights are Due in Eight or Ten Weeks

Tarrytown-on-Hudson, New York, July 22, 1907.

WILLIAM W. CASTLE CO.,

170 Summer St., Boston, Mass.

Gentlemen:—Yours, asking in regard to our experience with your circulator which you installed for us last fall, is at hand.

Owing to the late completion of our houses, we could not test it accurately for coal economy, but we intend to give it a thorough test in this respect the coming season. WE CONSIDER IT, HOWEVER, A SPLENDID THING IN OTHER RESPECTS, FOR IT GIVES THE RAPIDITY OF A STEAM CIRCULATION ON A HOT-WATER SYSTEM. This is a particularly valuable adjunct to a water system, even on a scientifically proportioned heating system, such as we have just installed, where the water mains are eight-inch mains, so arranged to remove every particle of friction, allowing the most perfect circulation by gravity.

We have your Circulator installed on TWO of our new houses, which were erected last year and which are 350 FT. LONG AND 56 FT. WIDE. The size of these houses will better be realized when we state that they are equivalent to twenty regular 100-ft. houses 20 ft. in width. In these large houses we can bring the water back to the boiler within less than ten minutes from the time the Circulator is started, so that the water returning to the boiler is within a few degrees as hot as when it leaves the boiler. This makes every hot-water pipe all through the range **EQUALLY HOT AT ALL POINTS**, and is a particularly valuable feature after a bright, sunny winter day, when the thermometer suddenly drops after sundown, as we can circulate the water as rapidly as steam could be circulated.

If it is valuable in a range like ours, where everything is scientifically balanced to remove all friction, it would be **DOUBLY VALUABLE** on the **AVERAGE** place, where the mains are invariably small and where the circulation is very badly retarded by friction. We were doubtful as to whether it would be of particular value to us under our conditions, as we had made the system as perfect as it was possible to make it, without regard to the initial expense in the installation of the system, considering it far better economy to have our pipe larger than was necessary, so as to remove all possible friction; but, **EVEN UNDER THESE CONDITIONS, WE HAVE FOUND IT A GREAT ADVANTAGE**, but we believe that to the average grower, with the ordinary hot-water system, it will be found of **INCALCULABLE VALUE**, and, undoubtedly, a very great economizer in coal consumption, as it will enable one to get a **GOOD DEAL BETTER RESULTS** from the fuel burned than if the water was circulated alone by gravity.

We were somewhat afraid of the expense in running the Circulator at first, but find that it is not necessary to run it continuously. It can be run fifteen minutes, and can be stopped for an hour and a half, and then run again for fifteen minutes, so that the amount of electrical power expended is unexpectedly small. **FROM A MECHANICAL STANDPOINT, IT IS PERFECT.** Any one can operate it, and it certainly seems to us an **INVALUABLE ADJUNCT TO A WATER SYSTEM.**

We should be glad to have any one call and inspect it at our Scarborough place, where it can be seen in operation, any time after we begin to fire in the fall.

Very truly yours,

(Signed) F. R. PIERSON CO.

The installing of the Circulator in Mr. Pierson's place was our first opportunity to demonstrate its value in a plant recognized as the most modern and best equipped in the country. Our main business previous to this was to correct imperfect circulation due to defective piping and **Boiler-ing**. I suggested to Mr. Pierson the type of boiler he should use—approximately the same as we are building at the present time. **Unquestionably he has the best gravity hot water system** on this continent yet anyone who will carefully peruse the above letter will see how greatly the Circulator has improved what I consider a perfect system of hot-water heating. **If the results in such a system have been what Mr. Pierson indicates how much more should the improvement be in a defective one?**

Considering the testimonials of Mr. Pierson, Julius Roehrs, W. W. Edgar, Robert Simpson and others which have already been published, I ask in fairness whether the florists of this country need anything more to convince them of the absolute value of this apparatus.

Keep in mind our Boiler and Heating System. If you wish a cheap second-hand boiler we have some to sell—steam and cast-iron hot-water. Although we do not recommend them we can quote you very low prices as we are removing quite a few.

W. W. CASTLE HEATING ENGINEER **170 Summer St., Boston**

HYDRANGEAS

FOR SUMMER BLOOMING

We have a magnificent lot of Hydrangea Otaksa grown especially for **JULY AND AUGUST FLOWERING**. The plants are just coming into bloom just beginning to show color, and will be in perfection during July and August, when they are in great demand at watering places and other summer resorts. There is nothing showier or more satisfactory for lawn decoration. We make a specialty of them, and find an increasing demand for them from year to year. They can be shipped anywhere safely by freight.

Large plants in tubs, \$2.00 to \$3.00 each, according to size. Very large specimens, in half barrels, \$5.00 and \$7.50 each.

Lupines

(See Frontispiece.)

The genus *Lupinus* has about one hundred known species, but not more than two dozen are in cultivation, and the larger part of the two dozen are annuals. For convenience sake the genus may be divided into three groups, viz., annuals, perennials, and those of a sub-shrubby character.

The annuals are very showy and varied in color, growing in any ordinary garden soil and producing an abundance of showy flowers. They grow better and give more satisfaction if the seeds are sown thinly out of doors in the beds or borders where they are to grow and produce their flowers. Early May is the best time to sow the annuals. A selection would include the following kinds, *Cruckshankii*, *elegans*, *micranthus*, *pulchellus*, *tricolor*, *hybridus*, *densiflorus*, and *villosus*.

In the eastern states the arborescent forms are not hardy and at this time we are not so much concerned about them. The perennial kinds are of greatest interest to us as they make, most of them, exceptionally valuable border plants. Probably the most valuable of all the lupines, as a garden plant, is *Lupinus polyphyllus*, shown in the frontispiece of this paper. This is an old garden plant and has been in cultivation for many years, yet it is not overplentiful in our gardens. It is one of the easiest plants to grow when given a congenial place to establish itself. This summer I saw a nice colony of it growing in Mrs. Higginson's garden at Manchester, Mass. This lupine grows about four feet high and its flowers are produced on long stems well above the foliage. The flowers are usually deep blue but the color varies very much in different plants. This species has a white variety which makes a most satisfactory border plant and a charming companion to the blue kinds. *Lupinus Nootkatensis* makes a dwarf and compact plant and attains the height of about two feet. Its flowers are also blue. As a border plant *Lupinus perennis* is not as satisfactory as the last two species. It loves to grow in the poorest and driest soils.

With the exception of *perennis* the perennial kinds delight in a good depth of soil, into which they may root freely. They also like an open situation where they can obtain plenty of light and air. The perennial kinds are increased by division and by seed. They vary a good deal when grown from seed; therefore when one has a good form it is best to increase it by division. Most of the species come from Western North America.

Robert L. Cameron

British Horticulture

A GERMAN TOUR

Mr. J. S. Brunton is organizing a trip to Germany, and it is expected that a representative party of British growers will participate in the excellent facilities afforded at a charge of about \$5 a day. The itinerary has been framed with a view to making the best use of the time at the disposal of the travellers who will be absent from London ten days. The places to be visited include Cologne, Konigwinter, Rudesheim, Mannheim, Darmstadt, Frankfort, the middle Rhine, Mayence, Coblenz, etc. The journey is so arranged that visits will be included to all the leading nurseries of the districts; the notable palm-houses of Frankfort, the spacious glass houses of Dans, Reuter & Co., Goos and Koerner, and the great international exhibition at Mannheim will be seen. Judging from the hearty reception accorded to a party of English editors when they recently visited Germany, it may safely be predicted that there will be nothing lacking in the cordiality extended to the British horticulturists.

NOVELTIES AT HOLLAND HOUSE

At the successful show held by the Royal Horticultural Society at Holland House, Kensington, awards of merit were granted to the roses Goldfinch and Lady Helen Vincent, which had also obtained honors at the National Rose Society's show. Messrs. Lowe and Shawyer obtained an award for their new H. T. rose, Joseph Lowe, which is a sport from Mrs. W. J. Grant. This is of a handsome shape and the outer petals are an attractive shade of pink. Messrs. Alexander Dickson and Sons secured four awards for their roses. These were for Lady Helen Vincent, Souvenir of Stella Gray, a Tea variety of a bronze tint; Mrs. Munt, a creamy-white H. T.; Mrs. Harold Broeklebank, another creamy-white H. T., resembling the Duchess of Portland. There were three new sweet peas which secured awards. Messrs. Dobbie & Co. showed another addition to the many flowers of the Countess Spencer type. This has been named Princess Victoria, at the request of Her Royal Highness, who admired the bloom when it was exhibited at the Rose Show. The petals are suffused with pink on a white ground, and the bold blooms are borne on useful long stalks. Mr. C. W. Breadmore, who has raised a number of sterling novelties, showed a picotee flower of the Countess Spencer type. The margins of the petals are edged with rose, which changes to almost pure white in the centre of the bloom. Messrs. Hurst and Son had a new variety, St. George, of an orange tint, with waved standards.

portunity thus afforded to consider and plan ways and means for the betterment of his business in the coming season. It has been truly said that he who makes no progress forward is in reality going backward. There are big openings ahead for anyone willing to use his eyes in the right direction.

As every one who has attended S. A. F. conventions in recent years knows, the trade exhibition has come to be probably the most im-

portant and generally appreciated feature of the convention. Each year brings its quota of new appliances intended to increase the efficiency and convenience of every operation connected with plant culture, the best of the new plant introductions are placed on inspection and an infinite variety of novelties in goods for florists' use is sure to be forthcoming in increasing proportion at each succeeding exhibition. Unlike the displays at ordinary horticultural shows, here each exhibit is in charge of attendants ready and anxious to explain the merits and comparative points of excellence. To fully convey to the mind of anyone who has never attended these exhibitions a clear idea of the advantage gained by a leisurely inspection of this vast amount of useful, up-to-date material is simply out of the question. "It must be seen to be appreciated." Certainly no one engaged in any line of horticultural work can hold aloof and still expect to advantageously compete with those who make the most of these opportunities. The outlook is very bright for an exhibition at the Philadelphia convention excelling any of its predecessors and intending exhibitors should not delay in securing space. We are informed that it is being rapidly taken up.

Some work ahead for the S. A. F. The prevalent opinion seems to be that the convention at Philadelphia will be a big one in every respect. The belief

is probably well-founded even though, as it appears now, some hardship may be experienced in the matter of railroad rates and the attendance from some sections reduced in consequence. Fortunately, however, for many the Jamestown Exposition excursion rates will be conveniently available and, in point of numbers, the meeting is likely to be a surprise. There are other and, at the present stage of the society's career, more important things than large attendance, boundless hospitality and hearty enthusiasm, that will have a strong bearing on the final verdict as to the value of the convention of 1907. It is generally recognized, we think, that the S. A. F. has got beyond its kindergarten period and must take up in a serious and thorough manner subjects of broad import which have a direct bearing upon the healthy development of our commercial interests. Our most intelligent and prosperous business men must be enlisted to work for the society, to frame wise policies which, in its capacity as their representative organization, it may adopt and follow up to a successful conclusion. The attitude of the horticultural interests as to tariff on glass, bulbs and certain other commodities should be defined by something more than a few spasmodic utterances at a convention session. Questions of transportation and express rates, the teaching of horticulture in the public schools, plant nomenclature and registration, the mail order trade, park control and many other subjects, professional or semi-public in their

Looking forward In this period of relaxation from business cares—vacation days practically forced upon many by the cessation of all call for their services or their products, the ambitious, diligent man will not fail to take advantage of the op-

character, stand in line for consideration by our national society and much can be done, under wise guidance towards their solution.

Boston's "Old Home Week"

We referred briefly in our issue last week to the approach of Boston's "Old Home Week" and our pleasure in the prospect of

a visit from as many of our horticultural friends as might come to Boston on that joyful occasion. We here repeat the invitation and hope to see many take advantage of the opportunity to see the old town at her best. Not alone the city but her far-famed suburbs will be arrayed in the glory, not only of bunting and electric lights but of midsummer verdure and sylvan beauty. Her unrivalled parks in all their natural and artistic loveliness will well repay the effort of a visit no matter how great the distance may be. Boston is "Old Home" in many respects other than as one's place of birth. In common with one or two other centres she holds the distinction of having nourished American horticulture in its infant days. Here ever since, under the protecting wing of the Massachusetts Horticultural Society, has horticulture found a hospitable home and from here have emanated example and impulse which have exerted a mighty influence in the upbuilding of American gardening and floral art. Scores of the greatest public parks and most noted private estates, from the Atlantic to the Pacific, bear the imperishable imprint of Boston genius. The death blow to stiff, clumsy and unnatural floral arrangement was struck in Boston and here the beautiful art of floral decoration as now practiced all over the land had its birth. There is not and never has been much of the gigantic in the composition of the Boston brand of municipal or individual ambition, but the New England metropolis stands well in what she has accomplished and she is essentially Old Home for much of the best in American home and business life as we find it today.

The Show at Holland House

The show of the R. H. S. of next importance to that in the Temple grounds, took place on the 9-10th inst., in the paddock adjoining the historic mansion of the celebrated statesman and notorious gambler, Chas. J. Fox; a name interesting to Americans, because it was his opposition to an obnoxious bill of Lord North's, relating to the port of Boston, which led to the American Revolution. The tents are pitched in the paddock at the back of Holland House, where, rumor says, Fox's favorite race horse, Pantaloon, was turned out to grass to end his days in peace, after winning for his master no less than £28,000 in one year.

What changes are wrought by the whirligig of time—now an American heiress rules the mansion—and a peaceful show of flowers takes place in the grounds, the only military element being the fine band—conducted by Lieut. Charles Godfrey—discoursing sweet music. By kind permission of the tenant the house is thrown open to visitors on the show day for a small fee, which goes to the admirable gardeners' orphan fund. Those that are fond of old furniture can wander through the state-ly rooms, including the cozy dining room, where John Timbs relates that Fox and his brother, the elder not yet 25, lost in three nights the sum of £32,000. But here he died in poverty, owing immense sums to the Jews, his tradesmen, to Walpole and others of his friends.

Entering the grounds by a badly-kept gravel road, flanked on either side by elms and common shrubs, the

first marquees are reached. Carter & Co. had a small tent to themselves just by the entrance, but the only thing on view worth notice was some well filled pots of their new pea "Quite Content"—certainly a good one to look at as one can desire if only the flavor be right. Sunrise tomato is a handsome sort and a good cropper. J. Veitch & Son had among other things a fine lot of orchids, some good American cannas, as Louisiana and Ottawa, a promising lobelia of an intense blue with large white eye, named Dorothy Dixon, and Croton Reidi—one of the best and richest colored—the group finished off by plants of the new *Angelonia salicifolia* and alba. There was a glorious bank of orchids from Sander & Son, most notable among them being *Cattleyas Mossae*, *Wagneri* and *Reichmanni excelsa*, and *Laelio-Cattleya*, "Martineti Empress." H. B. May put up (or down) a lovely bank of choice ferns, including a new *Lygodium Japonicum*, *Polypodium Mayi*, *Doryopteris nobilis* and other fine new kinds. Messrs. Charlesworth took the lead in orchids—lovely *laelio-cattleyas*, in all colors, and white and fine *cypripedes*, mostly hybrids.

As quite a relief to the eye after all this splendor, a lot of cool selaginellas, from Gurney Fowler, must be noted. Paul & Son followed with a fine lot of roses, including the pretty new ramblers "Goldfinch," the Gipsy and Wedding Bells. Also a bunch of the distinct and lovely China, Laurette Messimy and the very dark *Polyantha Ne Plus Ultra*, while a tall plant of the singular thorny *pyracantha* attracted much notice. Veitch had fine *Malmaison* carnations. Yaller Gal is yet the only true yellow in this class.

H. B. May put up the grand *heliotrope* "Lord Roberts and Ixoras Westi and macrothyrsa. His double *Zonals* were very fine, also some new colors in the *Cactus* class, as *The King*, *The Countess* and *Herbert Greenhill*. Low & Co. staged fine *Malmaisons*, one *Mercia*, a fine salmon, which the King selected for his buttonhole at Lincoln R. A. S. *Lady M. Hope* is really a fine thing and the dark *Maggie Hodgson*. New roses were *Commandant Felix Faure*, *Pharisaer*, *Gustave Greennerwald*, *Betty* and the exquisite *Irish Elegance*. The chaste *R. sinica Anemone* was in Paul's group.

G. Bunyard & Co. put up some healthy well-fruited cherries in pots, *Noble*, *Windsor* and *Bohemian Black*, also a tray of about forty sorts of strawberries and plates of black currants—*Gloire de Boskoop*—the only one that up to now has defied the mite. Quillim's begonias were again to the fore—some of the singles being six inches in diameter yet full of substance—*Mary Quillim*, *Pride of Eltham* and *Avalanche* the best white, while they also showed how well some kinds do for hanging baskets. Jarman (Chard) again showed his lovely new *sultans*, *Bride and Bridegroom*, *Bridesmaid* and *Honeymoon*. Sutton & Sons, under their own canvas, had exquisite masses of *Nemesia stramosa* of every color, and under a glass shade some fine *gloxinias* and *begonias*.

There were some fine out-door groups: *Cripps & Son*, mostly maples; Veitch, novelties from *N. China*, as *Lonicera tregaphylla*, *Vitis Thompsoni*, *Lonicera grata* and *Fremontia Californica*; L. R. Russell, a fine lot of ivies grown on standards and pyramids; coniferae, etc., almost filling one tent; Amos Perry, well arranged pondlets, filled with *nymphoeas*; and Artindale Sheffield put up pots of *Davison's* new *monthretias*, *King Edward*, *Prometheus* and *Westwick*—all great advances.

Thomas Bunyard.

NEWS OF THE CLUBS AND SOCIETIES

NATIONAL NUT GROWERS' ASSOCIATION.

The arrangements for our 1907 convention are so far perfected that we are able to announce that the Jamestown Exposition has been selected as the place and September 26-28 as the date for holding same. This date is concurrent with the meetings of the American Pomological Society and the Horticultural Congress, both of these important gatherings being held there during the earlier days of the same week. Present indications are that headquarters will be at the Inside Inn, with hotel accommodations there for those who prefer this location.

A most valuable and interesting program is assured, while the wide extent of territory from which the list of distinguished speakers is drawn furnishes a most convincing proof of the national importance of our organization and the industry it represents.

Prof. J. E. Wickson of California, and Mr. Henry E. Dosch of Oregon, will speak for nut culture on the Pacific slope; Col. Chas. A. Van Duzee of St. Paul, Minn., will show how the business interests residents of our most northern states; Prof. L. H. Bailey of Cornell University, will deliver an address; Prof. John Craig, also of Cornell, will make observations on the pecan; Dr. Robert T. Morris of New York City, will show the great value and wide distribution of the shagbark hickory; Prof. C. P. Close of Maryland, will tell about nut culture in that state, where the chestnut is the most prominent nut; Prof. H. K. Miller of Florida, will have for his theme, The Science of Nut Culture, and Prof. H. Harold Hume, of the same state, will give an object lesson in application of the scale of points in grading pecans; Mr. H. C. White of Georgia, will talk on Economic Horticulture, while several other attractive features, partly from the Southwest, are not yet ready for announcement.

The President's address and reports of the standing committees are certain to be of great importance.

The large number of leading horticulturists who will attend the several other attractive features, partly from the Southwest, are not yet ready for announcement.

The President's address and reports of the standing committees are certain to be of great importance.

The large number of leading horticulturists who will attend the several gatherings that week, the Exposition itself and the accommodations for visitors, as well as the low railroad rates from all parts of the country, combine to make an interesting prospect for a large and profitable meeting. Our members, as far as practicable, are expected to attend.

The members of the American Pomological Society are cordially invited to be present and participate in the exercises. All horticulturists, especially those interested in nut culture, will be heartily welcomed.

Subsequent notices and program will appear in due time.

F. H. BURNETTE, President.

J. F. WILSON, Secretary.

Poulan, Ga.

NEW ORLEANS HORTICULTURAL SOCIETY.

The annual meeting of the society was held at Kolb's hotel on July 17, the election of officers being the principal business. Charles Eble was chosen president, Henry Cook, vice-president; John Eblen treasurer for the twenty-third time; C. R. Panter secretary. A. Alost, at whose home the annual barbecue is given, reported that the young pig "Harry," selected for this year, was doing finely. The committee in charge of arrangements for the chrysanthemum show, November 10-15, reported that the schedule of prizes had been distributed. The secretary was instructed to notify the New Orleans Floral Society of the progress being made. The reports of secretary and treasurer showed respectively a membership of 50 and \$800 in the treasury. Among the exhibits were a fine specimen of *quisqualis*, one of three known plants in this city, plucked from a vine 150 feet long by treasurer Eblen; canna, a seedling from Mont Blanc, the nearest to white yet obtained, by C. W. Eichling. After business was completed a spread followed.

ST. LOUIS FLORIST CLUB.

The meetings of the St. Louis Florist Club have of late been better attended than ever before; the cause is the social features that have been provided. The club has voted to do away with holding annual flower shows as the Horticultural Society has taken this up. The late smoker, the interesting discussions, the picnic and the outdoor meeting for next month at Shaw's Garden all tend to interest our members who are much pleased that the Horticultural Society has undertaken the hard work of giving flower shows, leaving us the social features. We hope all will work with a will and hand in hand to make the flower show a success this fall.

ST. LOUIS HORTICULTURAL SOCIETY.

The executive committee of this organization held a meeting in the rooms of the Mercantile Club. The principal matter before this meeting was arranging for the November flower show. Should the new Coliseum be ready by that time the society will try for the opening event, which, of course, would be a big drawing card and no doubt a financial success. A spring flower show is also contemplated. The preliminary list of premiums has been issued and copies can be had by applying to the secretary, O. G. Koenig, at 6473 Florissant avenue.

THE SHAW BANQUET.

Invitations are out for the eighteenth annual banquet given under the will of the late Henry Shaw by the Missouri Botanical Garden, St. Louis. This banquet is for gardeners, florists and nurserymen, and will take place at the Southern Hotel, August 14, at 7 P. M. This is the first time the banquet has been held at the Southern Hotel.

MASSACHUSETTS HORTICULTURAL SOCIETY.

The Committee on Gardens of the Massachusetts Horticultural Society invites the attention of owners of estates in Massachusetts to the premiums offered by the Society for the encouragement of the horticultural development of private grounds.

There is an impression abroad that these premiums are intended only for large estates, but in recent years the committee has so arranged the schedule that all classes of private gardens and grounds are eligible, as the following list of prizes offered will show.

The H. H. Hunnewell Triennial Premium of two prizes, \$160, and \$80, is offered for an estate of three acres or more, and special prizes of \$50 and \$25 are offered for an estate of from one to three acres.

For still smaller places of from five thousand to twenty thousand square feet two prizes, the first a silver medal and \$10 and a second of \$10, are offered for the best flower garden and also for the best vegetable garden.

For the best garden of hardy roses are offered two prizes of \$30 and \$20 and the same is offered for the best peony garden.

Entries can be made at any time during the season up to September 15, excepting in the rose and peony classes which, of course, must be visited when in flower.

In making examinations of smaller estates and gardens the committee pays a good deal of attention to tasteful arrangement and to the general economy and thrift displayed, especially in regard to the neatness of the grounds.

The committee this year is composed of Charles W. Parker, chairman; Oakes Ames, George Barker, Wm. N. Craig, Wm. H. Elliott, A. F. Estabrook, A. H. Fewkes, J. A. Pettigrew, W. W. Rawson, Wm. P. Rich, H. P. Walcott, and S. M. Weld.

Wm. P. RICH, Secretary.

Sweet Pea Show.

Saturday, July 20, was sweet pea day at Horticultural Hall. Always one of the most beautiful of the summer shows this sweet pea exhibition is looked forward to with much interest, not only by the sweet pea enthusiasts of whom there are many in Boston, but by the public generally and on this occasion the attendance was very heavy, especially on Sunday afternoon, the show having been kept open over Sunday according to present custom here. The pea exhibits occupied the centre of the hall. N. F. Comley won three firsts and three seconds; Thomas Howden five first, one second; E. L. Lewis one first, one third; Wilfred Wheeler two seconds and one third; Wm. Reed one second; A. E. Hartsborn four thirds; Mrs. F. S. Dehue one second; O. B. Kenrick one second, one third, Joseph Thorpe two thirds. The varieties winning first prizes in the special color classes were as follows: white, Dorothy Eckford; blush, Gladys Unwin; rose, John Ingman; blue or purple, King of the Blues; lavender, Mrs. Geo. Higginson; red or crimson, King Edward VII; orange or

salmon, Helen Lewis; any other color, Shazada.

Among the other striking exhibits which filled the remainder of the hall were superb collections of hardy herbaceous flowers from: Blue Hill Nurseries, Bay State Nurseries, R. & J. Farquhar, F. J. Rea and Mrs. J. B. Lawrence; a beautiful arranged tank of aquatic plants and flowers from Harvard Botanic Garden; a gorgeous collection of Japanese irises from R. & J. Farquhar, and miscellaneous exhibits from several regular contributors.

First-class certificates were awarded to H. H. Rogers, gardener James Garthly, for an unprecedentedly fine display of stocks and to James McKissock for new delphiniums. W. W. Rawson was given a cultural certificate for *Delphinium Zalil* and George E. Davenport honorable mention for variegated nasturtium.

In the fruit line there were some luscious examples. Wilfred Wheeler won first prize for a charmingly arranged exhibit, which included boxes of currants and gooseberries and large branches of currants, raspberries and thimble berries; also a second prize for a tasteful combination of cherries, strawberries and currants. Currants and gooseberries were displayed in abundance by several exhibitors. Vegetables were also well shown and the Boston Mycological Club was out in full force with exhibits of mushrooms and other fungi.

FRENCH NATIONAL CHRYSANTHEMUM SOCIETY.

The annual show and convention of the above society will be held this year at Toulouse. As a result of the meeting at Caen last November it has been decided to publish a little cultural guide for the use of members and others, and the work is to be put up for competition. All manuscripts must be sent in by July 15 and must not exceed 30 pages of printed matter in 12mo. A committee will be appointed to adjudicate upon the manuscripts and the sum of 100 francs is allotted as a prize for the best treatise.

The program of the convention has been drawn up and issued. It contains questions relative to packing, sports,

Table of Decorative Foliaged Plants at the Newport Show, by D. McIntosh.

seeding the chrysanthemum, diseases, etc. The opening day is fixed for the 5th November. C. H. P.

THE FRENCH ROSE SOCIETY.

The 11th annual convention of this society was held at Clermont-Ferrand on June 15th last.

As usual, there was a large attendance of members and rose growers generally. Monseigneur Christophe presided and among the subjects dealt with were papers on Classification, the origin of Hybrid Perpetuals, the best novelties of 1904, treatment of diseases, etc.

It was agreed that next year's convention be held at Dijon.

CLUB AND SOCIETY NOTES.

The N. H. Horticultural Society met at Monadnock with Mr. Leighton on July 18, for its summer gathering.

The thirty-first annual convention of the Georgia State Horticultural Society will be held in Augusta on August

7 and 8. P. J. Berckmans is president, L. A. Berckmans treasurer.

The New Haven Horticultural Society (Conn.), will hold its annual outing on August 1, and has invited the Connecticut Horticultural Society to join them.

The Saratoga Floral Association organized in 1896, whose floral fetes for several years were notable in Saratoga, N. Y., has just been dissolved by the Supreme Court, leaving debts of about \$3400.

The El Paso Horticultural Society of Colorado Springs, Colo., will hold an exhibition on August 21, 22, 23. Carl U. Fohn, head gardener for Gen. W. J. Palmer, J. A. Valentine, Hon. A. D. Mauff, Geo. Fleischer and G. Hennenhofer are selected as judges.

The Intertown Dahlia Association was organized at the residence of P. E. Carmody, Ansonia, Conn., on July 12., with officers as follows: Pres., F. H. Cooper, Seymour; vice-pres., Edward Lewis, Derby; sec'y., D. H. Palmer, Ansonia; treas., Archie Davidson, Ansonia. A show to be held in Ansonia the last of September is a prospective feature.

The first horticultural show among the summer residents at Lake Forest, Ill., was held on July 13, and created so much enthusiasm that it promises to be an annual feature. Extensive collections of hardy perennials, decorative plants, ferns and evergreens were in evidence and the vegetables were no less attractive. W. C. Egan, E. A. Kanst and W. N. Rudd were the judges and nearly a hundred first-class prizes were distributed.

Japanese maples are said to be fruiting much more freely in England this season than ever before. The fruit adds greatly to the decorative value of the plants at this season.

First Prize Collection of Roses at the Newport Show, by James Robertson.

THE S. A. F. CONVENTION

CONVENTION RATES TO PHILADELPHIA.

There has been considerable uncertainty regarding reduced railroad rates for all organizations, owing to the two-cent rate agitation. In quite a number of states the two-cent rate has been made a law.

I made application to the Trunk Line Association (in whose territory Philadelphia is situated) asking for a reduced rate of a fare and a third for our session. After considerable correspondence, the Trunk Line Association and New England Passenger Association granted the reduced rate and so informed the various other Passenger Associations. I also placed myself in communication with these Associations, but up to the time of the date of this letter I have received no word from any of the Associations, excepting the Central Passenger Association, and this Association would not grant the reduced rate of fare and a third, although I was in personal communication with the officials of the Association.

The only concession which I could obtain from the Central Passenger Association is as follows:

They will charge a two-cent rate in all the territory under their jurisdiction, but at the same time will provide tickets, which will cover a rate of fare and a third in the territory governed by the Trunk Line Association; in other words, a ticket can be purchased in any city covered by the Central Passenger Association through to Philadelphia, but the fare will be at the rate of two cents in the territory covered by the Central Passenger Association and at the rate of fare and a third in the territory covered by the Trunk Line Association.

I would further inform you that this special concession covering the selling of a ticket through to Philadelphia is made only on the following conditions:

The Central Passenger Association will provide a supply of standard card orders. These to be furnished to me, and I will, upon application to me by our members, send such cards as may be necessary for their use.

You will understand that the reduced rate covering the selling of a through ticket to Philadelphia, can be obtained, only through the use of the CARD ORDER, as received from me, and these Card Orders cannot be used by any person except members of our Society, or those attending our convention.

If you desire to travel in the territory of the Central Passenger Association,—and necessarily you must go through the Trunk Line Association—be sure to obtain from me in advance a CARD ORDER.

As I have stated to you above, I have been able to secure a concession only from the Trunk Line and New England Associations at one and one-third fare rate, and from the Central

Passenger Association of a two-cent rate in their territory, with a through ticket covering the territory of the Trunk Line Association to Philadelphia. It is possible that I may hear from the other Associations; and if so, I will furnish the information direct to the papers at the earliest possible moment.

I would call your attention to the reduced rates as granted by all the railroads to the Jamestown Exposition. In case concessions are not made by the other Passenger Associations, I would suggest that you make inquiry at the railroad office in your city as to the cheapest and best way to get to the session, and at the same time take in the Jamestown Exposition. These special tickets will permit you to stop over in Philadelphia and New York.

P. J. HAUSWIRTH, Secretary.

ST. LOUIS TO PHILADELPHIA.

The St. Louis Florist Club has made special arrangements for transportation to Philadelphia for the S. A. F. Convention, via Pennsylvania Railroad. The round trip rate will not exceed \$25. A special car has been arranged for, and berths may now be reserved in same by addressing William C. Young, 5512 Waterman avenue. The sleeping car fare is \$2.50 each way. All who wish to do so are cordially invited to travel from St. Louis with this party. It is expected that many from further west will travel on same train from St. Louis on. The St. Louis delegation promises to be large and a pleasant time is assured. State Vice-President Young has a way of entertaining in home-like fashion. Any local or out-of-town florist who has any intention of going with St. Louis should let Mr. Young know at once as he is the proper person to apply to for any information on convention matters.

S. A. F. LADIES' AUXILIARY.

The secretary of the Ladies' Auxiliary of the S. A. F. would be pleased to register as many members and send pins to as many as possible before date of convention, as the pins will enable members to identify each other quickly. Address Mrs. Charles H. Maynard, 219 Horton avenue, Detroit, Mich.

THE INTRODUCER OF THE CHRYSANTHEMUM.

In your issue of December 29 last I referred to a fund having been started here to help the two grand-daughters of M. Pierre Louis Blancard, who introduced the chrysanthemum into Europe in the year 1789. These old ladies have been living in England for many years, and are as before mentioned in feeble health and straitened circumstances. It is gratifying to be enabled to record that the result of the joint appeal of my colleague and myself has resulted in the sum of \$240.00 being collected to relieve the present necessities of these poor old ladies.

The fund has been subscribed to by French, English, Scotch and Belgian admirers of the popular autumn flower.

C. H. P.

A LETTER FROM THE GINGER JAR

Dear Mr. Editor:—What with the Elks and the rain and John Westcott the past week in Philadelphia it has been unusually strenuous. To add to the excitement we have had President Stewart and Secretary Hauswirth on our hands and their anxiety to see whether all the convention fences were in proper repair has kept the local people keyed up to the highest pitch. We are confident we have sent all hands home feeling buoyant as to the prospects for a good time in Philadelphia Aug. 20th to 24th. Our local Florist Club members headed by President Pennock have been working quietly but effectively on the details, and a successful convention is assured. The president's reception on Tuesday evening at the Broad Street Theatre will be enlivened with music and refreshments and with a moving picture show appropriate to the occasion. The ladies will be taken on a special trip to Willow Grove and on the Friday there will be a grand finale in the shape of a trip to Belmont Mansion in Fairmount Park, winding up at that point with a banquet. Sandwiched in between will be the bowling and shooting, ably presided over by Messrs. Graham and Cartledge respectively. I was almost forgetting one of the best features of all, namely the trip up the Delaware River by boat to the Dreer Nurseries at Riverton. This will take place on Wednesday and will be very enjoyable. The good people of this good old town are really worried more with what not to than what to give our visitors. We have so much to show—from Independence Hall and Betsy Ross and Bartrons Gardens, to the Mint and Fairmount Park and Girard College and Cramp's and Carpenter's Hall and hundreds of other places that come crowding to our minds when we think of it—that we are buried in a plethora of good things and have to pick out only a few and be content with suggesting the rest. On one point we are agreed; we will not attempt to entertain too much, but will maintain the happy medium of enough, with a hearty welcome, and leave our guests a little time to disport themselves in accordance with their own sweet wills. Now, Mr. Editor, you have been with us and have caught our spirit and I trust you will tell the whole country through Horticulture just how the prospects are for the Philadelphia meeting and assure them that Mr. Penn with Mrs. Penn and the whole Penn family have the latch string out and that "the more the merrier" will be the slogan.

G. C. WATSON.

Prof. Stone of the Massachusetts Agricultural College accompanied the officers of the gas light company to Ludlow, Mass., to examine the elm trees said to have been poisoned by gas, and suggest the remedy.

Complaint having come to the Board of Public Works, Poughkeepsie, N. Y., that many trees about the city were in a dangerous condition, it has been decided to have a forester examine them in the hope that some of them may be preserved.

MASSACHUSETTS AGRICULTURAL COLLEGE.

SUMMER SCHOOL OF AGRICULTURE.

An analysis of the attendance at the summer school now in session at the Massachusetts Agricultural College shows that the enterprise has much more than a local character. In an enrollment of 203 (more still registering) there are 32 from outside the State. The largest foreign delegation is from Connecticut and numbers thirteen. New York and Vermont send four each; Pennsylvania three; while a single representative is present from each of the following States: Alabama, Georgia, North Carolina, New Jersey and Rhode Island.

The 171 registrations from Massachusetts show a very interesting distribution. Seventy-five towns and cities are represented, Worcester leading with a delegation of 21. Other large groups come from Springfield, 15, and Brockton 11. Amherst also sends 11, Boston sends 6. Among the smaller cities and towns No. Adams and Lawrence lead.

It might be expected that western Massachusetts would be the chief beneficiary of a summer school at the Massachusetts Agricultural College. The figures show, however, that there are 43 enrolled from the western counties, 48 from Worcester county, and 80 from points east of Worcester county. It is plain, therefore, that the State as a whole has been pretty well covered.

Ten per cent. of the pupils are men. While this looks small it is in reality disproportionately high, since among the whole number of teachers in service somewhat less than five per cent. are men.

PERSONAL.

Julius Roehrs sailed on a short European trip on July 24.

Visitors in Boston: Daniel MacRorie, Orange, N. J.; I. Rosnosky, Philadelphia, Pa.

John Scott of Flatbush, N. Y., sailed on Saturday, July 20, on Red Star steamer Zeeland.

S. Tokuda of Yokohama Nursery Co. sailed from Seattle for Japan, on July 23, to look after his shipments.

Visitors in New York: W. Clark of Pittsburg Cut Flower Co. and Mrs. C. A. Williams of Pittsburg, Pa., A. T. Vick, Albion, N. Y.

Fred S. Cooley, who for several years has been assistant professor of agriculture at the Massachusetts Agricultural College, has accepted a position as supervisor of the Farmers' Institute of Montana at Bozeman, that State. Professor Cooley will begin his duties there Sept. 1.

Frank McMahon, of Seabright, N. J., famed as a rose grower for the New York market, has been elected mayor of Rumson, the richest borough on the Jersey Coast. We have the honor of Mayor McMahon's acquaintance and can heartily record our approval of Rumson's choice. The town is to be congratulated.

Many electric storms, some accompanied by hail, have done much damage to trees, crops and greenhouses, throughout many districts during the past week.

AN AMATEUR'S SUCCESS.

Horticulture Publishing Co.:

Gentlemen.—I herewith enclose a photograph of a *Cattleya gigas* Sanderiana. The plant is a small one of twelve bulbs and bearing five flowers on one spike and three on another, said flowers measuring ten inches from tip to tip. The plant is one that I bought from an importation last year and I feel very proud of flowering this plant when we take into consideration that I am an amateur and it was only three years this coming October that I started a collection of orchids and I have, at the present time, two thousand three hundred plants and over four hundred varieties.

I wish further to state I take entire *Cattleya labiata* of thirty bulbs with work outside of my business hours. At the time I started this collection I had seen very little of orchids and knew absolutely nothing about their care or handling, but have had fine success in flowering my plants and have lost, during said period, only six plants.

Cattleya gigas Sanderiana.

I have, at the present time, one *Cattleya labiata* of thirty bulbs with fourteen new growths. I also have a few specimen plants, one of *Cattleya Mossiae* of one hundred and thirty bulbs, one of *Cattleya Schroederiae* of forty-six bulbs and one of fifty-two bulbs. I also have a large specimen plant of *Cattleya Bogotensis*, *Cattleya Chocoensis* and *Percivaliana* and others. At the present writing I have a plant of *Cattleya Gaskelliana* of a very fine type, which I expect to have named shortly. The plant has four flowers in bloom and seven buds.

I am giving you this information so that you may, if you see fit, publish the facts to show what an amateur has accomplished simply by making a special study of the plants and by using good common horse sense, hoping it will be the means of starting others in the growing of orchids, for I find more pleasure and more satisfaction in growing orchids than I did in other plants.

I wish to state in speaking of this *Cattleya gigas* Sanderiana, the picture of which is enclosed, that experts have seen this plant and pronounce same the largest flower they have ever seen.

O. A. MILLER.

East Orange, N. J.

REVIEW OF NEW BOOKS.

THE BOOK OF WATER GARDENING. By Peter Bisset, Twin Oaks, Washington, D. C. A. T. De La Mare Printing and Publishing Company, Ltd., New York, Publishers. Price postpaid, \$2.50.

When it came to our knowledge that Peter Bisset was writing a book, we knew that it would be a book worth having, the work of a sincere, painstaking and thorough man. And here is a subject on which probably no gardener in this country is so well qualified to speak. It was with more than ordinary interest that we opened this elegant book, faultless in its typographical make-up and binding and profusely illustrated with beautiful half-tone engravings, and we found it to be just what we expected—a complete treatise on every phase of practical aquatic gardening. The book comes at an opportune time, and will be welcomed by all interested in this fascinating and healthful phase of garden work.

Mr. Bisset is superintendent of the beautiful estate, "Twin Oaks," belonging to Mrs. Gardiner G. Hubbard, at Washington, D. C., and has been a lifelong student of this class of plants, having first become acquainted with them in his apprenticeship days in the Earl of Rosebery's gardens at Dalmeny Park, Scotland. He has originated some of the handsomest seedling nymphaeas now in cultivation, and has under his charge at the present time one of the largest and most complete water gardens to be found in the United States. It can safely be asserted that never before has the subject of water gardening been so concisely yet so fully and interestingly treated as in this book. It should be in the hands of every admirer of aquatic plants.

A MOTH SCHEME WHICH IS A FAILURE.

Local scientists have discovered by experiment that it does not follow that because a moth can be lured to death by the evening lamp, the whole tribe of gypsy and brown-tail pests that now torment Massachusetts can be exterminated with the aid of a few glowing arc-lights.

Moths in plenty fly into the lights, but the experimenters have found that they are overwhelmingly of the male sex. At Belmont, recently, Prof. William Lyman Underwood set up two large wire frames, covered with cloth to which were attached sheets of sticky fly paper. Suspended in the glare of powerful arc lights for two weeks, the trap enticed to their destruction 2,104 moths, only 68 of which were females.

Another experimenter is James H. Bowditch, of Brookline, who used boards covered with fly paper and placed them around trees within range of powerful lights. Examination of the result by Inspector Joseph Sylva, of the moth commission, showed for 32 traps a yield of 1,630 moths, of which only 51 were of the female sex. Other experiments disclosed a percentage of 94.8 males to 5.2 females.

Entomologists agree that the coyness of the female brown-tail moth in presenting herself for annihilation, whether due to abnormal prudence or only to excessive domestication, is fatal to the scheme for allowing the pest to exterminate itself.

THE PEONY.

Address of J. Elliot Coit before American Peony Society, Ithaca, N. Y., June 27, 1907.

(Continued from page 77.)

Type II, the Japanese.

When a peony begins to double under the growth pressure brought about by an excess of food, it may do it in two ways. It may present in the same flower stamens or carpels in all stages of transformation, or it may uniformly widen the filaments of all the stamens simultaneously. As a result of this second method, we get the true Japanese type. It possesses the petals of the single with all of its stamens uniformly widened into strap-like petaloids with anthers distorted in various ways. It usually has normal carpels. Many writers seem to hold the erroneous notion that Japanese peonies are the progeny of some one species. C. S. Harrison in the second edition of his *Peony Manual* talks about the wonderful possibilities of the "new race" of Japanese peonies. This is not a "race" at all according to the definition of race as given by Professor H. J. Weber of this University, for this type may and does appear in several species. It simply represents one method or step in petaloidy of the stamens of any species. It is a horticultural type and is entitled to no botanical standing whatever. Example: *Glory*. (Illustrated on the cover of the *Peony Check-List*.)

Type III, the Bomb.

The bomb is one step beyond the Japanese. The guard petals are still well differentiated from the petaloids, but the petaloids are much wider and no vestiges of anthers should be found upon them. They may have increased in number beyond the original number of stamens by chorisis of the cords. In the typical bomb, the follicles should be well concealed. I regard *Chas. Binder* as a good example of this type.

Type IV, Semi-Double.

Into this type we group those forms which have begun to double without any system. They present in the same flower both stamens and follicles in all stages of transformation. They are usually loose flowers of little character, and in general are undesirable. They are common in any batch of seedlings, especially the semi-double reds; and I am perfectly safe in saying that far too many of them have been given names and places in our lists. It is in this type that the greatest confusion of names exists, and we may find it necessary to use somewhat drastic measures in bringing this group into anything like satisfactory shape; and much is yet to be done before anything like success is achieved.

Type V, the Crown.

When the Japanese type retains its narrow petaloids but transforms its follicles into wide petals which resemble the guard petals, we have a two-story effect which is unique and

for which I propose the name *Crown*. The *Crown* may be of two kinds: erect crown or reflexed crown. *Princess Beatrice* (Kelway) is a very good example of this type.

Type VI, the Rose.

The rose type represents the fullest development of which the peony flower is capable. It is fully double, with all stamens and carpels transformed into petals with no vestiges of anthers present and no follicles. Few examples of the rose type will be found which do not show vestiges of follicles, for the crimson flecks present in *Festiva maxima* and *Avalanche* represent the only remains of the lost follicles. These crimson flecks are very common among flowers of this type, and may be found in the double reds on close examination. In the typical rose form, the guard or primary petals should not be differentiated from the rest; but this is not essential. A good example of the rose type is *Avalanche* (Crousse).

How Confusion Has Arisen.

The confusion in the names of peonies of which so much complaint is made, has arisen in several ways. Most important of these is the habit of making inadequate descriptions. As an example I may say that the description we have of *Mons. Bellart* (Delache, 1850) consists of two words, "clear purple." Today when we have such a large number of varieties on the market, such a description is useless and any description is inadequate which does not give the color, size, season, and horticultural type, together with the species to which it belongs. Other causes for confusion are the poor attachment of labels to the roots, and illegibly written labels. Then, too, the lack of a check-list has resulted in the same name being used over and over again for different seedlings. And then a certain amount of renaming of old varieties for purposes of pecuniary gain has been indulged in by irresponsible growers. I hope that the check-list will be used for reference to all names already published, and that this Society may maintain a register to take care of the new acquisitions from year to year. It remains for the members of this Society to all work together to build up a sentiment which will cause every producer of a new variety to send in specimens and complete descriptions, together with a photograph and a proposed name, before he offers the variety to the trade. In return for this the Society might issue to him a number and allow him to advertise his new variety as American Peony Society No. —. If the secretary found that the type of bloom he offered for registration was already well represented and that his seedling almost duplicated several already registered, he could discourage the registration of that name and furnish the grower with the names of those which it already duplicates. Now, my friends, the question arises, Will the growers do all this? I maintain that this plan is perfectly practicable and is the most natural thing to do, and the degree to which it will succeed will depend solely upon the moral strength and commercial prestige of the members of this Society and in the degree in which people believe in its honesty and reliability. Whatever work we

do with peonies, we must do it carefully and well, and in such a way that it will stand the test of the years. If this is done, peony growers everywhere will covet our registration numbers. If it is not done, they will not care a rap for our numbers. When we come to consider this subject, we find that we are dealing with principles which reach far beyond mere peonies. Whether we have to do with apples or roses, potatoes or chrysanthemums, we must face the question of variety descriptions and variety records. Therefore the question arises:

What Is a Variety?

Ever since the early forties when C. M. Hovey deluged the readers of "Hovey's Horticultural Magazine" with lengthy discussions in regard to varieties of strawberries down to recent times when the fruit growers of the west were wrought up to such an intense state of excitement over the *Gano* and *Black Ben Davis* apple controversy, this question has been the cause of prolonged discussion. One faction holds that every seedling from a plant (which does not come true from seed) is a distinct variety. This idea of a variety is based on its origin. The other faction holds that a variety is a group established by man for convenience in trade. Those persons who describe seedling peonies with the first idea in mind, add greatly to the confusion, for where many seedlings are raised, many of them necessarily very closely resemble each other.

Can the Same Variety Originate Twice?

Here again we have a much fomented question and one which depends for an answer on the idea you have as to what a variety is. I take the ground that a variety is a group of forms which is made for convenience and in which the forms are near enough alike to pass for the same thing in the peony trade. I therefore hold that varieties can and do originate at different times and places and that it is our duty to reduce to synonyms those names which have been given different seedlings of the same variety. We should not be too radical in this, however, but should always allow distinct names for all seedlings which have differences sufficient to be detected by the eye trained for peonies. It seems to me that this is the only way out of the difficulty.

How to Describe Color.

Theoretically we should describe colors in percentages of the primary colors, which may be obtained by rotating a graduated wheel with sliding color scales upon it. This method, however, is too complicated and time-consuming for peony work, and we have therefore to rely upon some color chart. After looking over the various charts available, I am convinced that the chart published recently by the French Chrysanthemum Society is by far the best. I am therefore using this and giving the popular term for the color for ordinary use. The page and number of the page are also quoted and may be referred to in case definite and critical comparisons are to be made. The title of this work is "Repertoire de Couleurs" (Index of Colors), and it contains hundreds of charts in almost every conceivable shade.

FRUIT AND VEGETABLE PROSPECTS IN WESTERN NEW YORK.

The subject of the weather is usually a trite one, fit only to fill embarrassing pauses, but this season it has become an interesting if not a vital issue among the green truck growers of Irondequoit. Next to the high winds in the early spring, sharp cold nights were the most conspicuous feature in the spring's meteorological record, but as far as can be discovered at present, the only noticeable effect of these has been to retard vegetation. No mention is made, from any part of the town, of actual damage inflicted.

As week follows week without adding materially to the aggregate rainfall, the outlook for small outdoor crops, naturally becomes less assuring. Excessively wet weather at this time of the year is for various reasons undesirable, yet it is not without its compensating advantages, and pretty much the same may be said of an abnormally dry season. Of the two extremes, the majority of the gardeners would prefer the dry; nevertheless it is possible to ignore the seriousness of a deficiency in the rain fall. What the gardeners are chiefly concerned about is the effect upon the future crops. If the next month or two, which constitutes the main portion of the growing season for the majority of crops, should be normally dry, it is feared that the consequences may be of a serious nature, for there are very limited reserves of moisture in the soil to atone for any deficiency in the current surface supplies.

The wonderfully healthy appearance of the few fields of rye, is frequently commented upon. These plants are often more advanced in growth than is the case this year, but rarely are they more uniformly developed, healthy and vigorous, and, as these considerations are of much more vital significance than mere luxuriance of growth, the prospects are generally regarded as eminently reassuring.

All through Western New York the fruit growers are encouraged and are looking brighter, and all because the weather man has handed out a little sunshine. A close inspection of the apple orchards has been made, and they show that about all varieties are looking well, and there will be very little, if any, falling off in any of the orchards.

Baldwins will not bear this year as well as last. Russet, Pippin, Lady Blush, Spy, Greening, and Kings will be a big crop—if the present indications count for anything. Peaches will be a little more than half a crop. Bartlett pears are setting good, while the Kieffer variety seems not to be doing well. H. R. PEACHEY.

Irondequoit, N. Y.

BETWEEN YOU AND ME, What do you think of the Buyer's Directory and Ready Reference Guide of HORTICULTURE? I always look it over before I do any buying.

INSPECTING THE MILLIONAIRE.

Our friend and everybody's friend, Patrick O'Mara, would never be accused by any one of the legion of those who know him, of following up millionaires for the sake of knowing them yet here we have him, with his back towards us, intently bent on that very thing. This particular Millionaire, however, happens to be a strawberry and like other millionaires it

has already had considerable newspaper notice. On invitation of Prof. Johnson, Mr. O'Mara went out to see the famous berry and on his return is accused of having said it was as big as a potato, but he declares this to be a base fabrication. He is willing, though, to go on record as saying that it strikes him as being the best thing in the way of a strawberry that has yet come under his notice

FRUIT CROPS IN WASHINGTON.

Reports from inspectors in various parts of the Spokane country, embracing 150,000 square miles in eastern Washington and Oregon, the panhandle of Idaho, western Montana and southeastern British Columbia, show that this season's fruit crop will average 85 per cent. of the 1906 yield, which was a record-breaker, but that tree, bush and vine fruits will be of better color, size and flavor than ever before. Greater care has been taken by the various state and provincial horticultural commissioners in eliminating infested trees shipped in from outside, and the yield will bring the growers between \$9,000,000 and \$10,000,000, which is a gain over last year. Prices are maintained, the supply being far below the demand, because of heavy exports to Europe, Australia and the Orient and big shipments to Chicago, Denver, Boston and eastern points.

F. A. Huntley, state horticultural commissioner for Washington, has three deputies at work in the commonwealth. They are stationed in Spokane, Tacoma and Seattle, who are assisted by special inspectors. This service has the effect of raising the standard of purity and cleanliness of all fruits to a marked degree. It has done more than anything else to force thorough spraying and careful sorting and packing by the producers, and inferior stuff is kept out of the markets.

On the highlands, there will be im-

mense crops of apples and prunes. In the Spokane, Yakima and Walla Walla valley the apple and peach crops are late, but the trees are well laden and orchardists are looking for a banner year. Nearly all the fruit will be marketed on commission this year.

The cherry crop was large this season. The berry crop also was large, growers of strawberries in the Spokane valley and the Sunnyside district harvesting from 500 to 700 crates the acre, while several culturists near Greenacres, reported yields of 1000 crates an acre. The prune crop in the districts west and southwest of Spokane promises to be unusually heavy.

Several Australian firms have sent their American representatives into the Yakima country, west of Spokane, to buy fancy red apples. Through an alternation of seasons, the apples will reach the other continent at a time when the fruit there is out of season.

Prof. Cyrus L. Smith, commercial representative of the Inland Empire, announces that the pear crop in the Spokane country will be from 15 to 25 per cent. better in grade than in any previous year, and, he adds, there is every indication the yield will be a big one. The recent rain has helped the fruit wonderfully and improved it greatly.

One of the most beautiful decorations in Boston is the big retail establishment of Filene at the corner of Washington and Winter streets, every window in the vast building being adorned with a window box of geraniums and vincas.

Seed Trade

As the season advances, it becomes more evident that many crops will fall below average, particularly peas and corn. As regards the former, it is generally accepted that the crop will not be materially better than last year, and may finally prove worse.

The canners are very busy packing and working 16 to 18 hours a day. Thus far, they have managed to keep fairly well up with their work, and the crop of early peas, mainly Alaska, will be from 75 per cent. to 80 per cent. of an average, and probably the latter varieties will not do any better.

While it cannot be said that sugar corn is a failure in the east, it will certainly need to grow rapidly to make up for lost time. It is at least a month late, and much of it looks sickly. The consensus of opinion among canners is that under the most favorable conditions from now on, they cannot expect over one-half to two-thirds of a crop, which of course, means that the prospects for seed are very dubious.

Vine seeds are not promising, but they are not in so unfavorable a condition as corn. An indication of the way the situation is viewed by canners may be noted from the fact that corn which sold slowly at 50c. per dozen cans during February, March and April now brings 75c. readily, and jobbers are active bidders. It is wise not to borrow trouble, but it is extremely foolish not to recognize the signs of the times, and those persons who regard everything as rosy, may find they have been living in a Fool's Paradise.

Referring again to peas, most of the responsible growers have ceased to take on any more contracts, realizing that they cannot fill orders already booked. Radish seed, especially Scarlet Globe, and White-Tipped Scarlet turnip, of the right stocks, will again be at a premium.

No news of importance from the Golden West within the past week, but it is now quite generally believed that onion seed will not be quite so short as seemed probable in April and May.

Tomatoes are late, and they will require a late, warm fall to mature much of a crop.

The sympathy of the trade in Toledo, O., is with Mr. Wm. Philipps, who recently suffered a heavy loss through a fire which destroyed his entire stock. The fire broke out next door to the Wm. T. Philipps Seed Co. and finding its way into the big freight elevator, spread rapidly over the third floor, which was used for the storage of buggies and wagons, in which this house deals heavily. The other floors escaped the flames, but everything was so thoroughly water-soaked, as to be considered a total loss, which fortunately is fully covered by insurance. This firm is doing a large business with truckers and the stock on hand is considerable.

The Wood, Stubbs & Co., seed house on East Jefferson street, Louisville, Ky., was destroyed by fire early on the morning of July 18. The fire started in an adjoining building and for a time threatened the entire block. Wood, Stubbs & Co.'s loss was estimated at \$25,000, partially covered by insurance.

VALUE OF HEDGES AS CROP PROTECTORS.

Hedges as a crop protection, in addition to their value as an ornamental attraction to a place, are rapidly becoming a necessity to the grower of small truck and flowers, and a defense which the greenhouse owner appreciates when the cold winds are

Hedge Protection for Truck Gardens.

blowing sixty miles per hour. This question of shelter from winds is quite as important as fuel and building material, which money may buy.

The illustration here shows the hedges on the garden farm of J. M. Cooper, Irondequoit, N. Y. To visit this place reminds one of the hedges of England. They add hundreds of dollars in value to a place.

H. R. PEACHEY.

CELERY GROWING IN IRONDEQUOIT.

(Continued from page 815).

During the early stages of growth it is only necessary to frequently stir the soil. When twelve to fifteen inches long, loosen the earth two or three inches deep with cultivator or hand-hoe; the celery is then ready for handling, which must be done with great care. The operator gathers all the leaves of each stalk up and holding in position with one hand presses the loosened earth against the stalk with the other. When this is finished the earth is thrown toward the celery from both sides with a one horse plow. It is well to have a man follow with a hand hoe and draw the earth still closer to the celery where the plow has failed to do the work properly.

As fast as the celery grows, hoe up the earth to within a few inches of the top until the time for bleaching. This part of the work is tedious and to do it well one must know how to handle a spade. A man stands on either side of the same row and commencing ten or twelve inches from the celery, raises a straight bank of earth covering all the celery except three or four inches of the largest leaves. Each man endeavors to build his side firmly and straight up and down. It is important that the hearts should be kept straight and not in any way injured.

In the Middle States celery usually is taken up about the first of November. The stalks are plowed up with a machine, some of the earth shaken from the roots and left in heaps along the row. In the meantime, a trench is opened in some convenient spot ten inches wide, the depth to correspond with the length of the celery.

Place the stalks in an upright posi-

tion, closely packed together until the whole trench is filled. As the weather grows colder the earth is drawn from either side towards the celery and when the covering is finished it will look like a single row of celery. Tops should be dry when packed in trenches, else the plants may rot badly. The tops are preserved by covering with long manure, straw, hay or any other litter, but see that a sufficient quantity is used. The celery is now in condition to use when properly bleached.

H. R. PEACHEY.

CORRECTIONS.

Unfortunately for the peace of mind of publishers, proof readers need vacations just as other mortals of less importance do. The brief absence of this indispensable personage explains some of the typographical vagaries which our readers undoubtedly discovered in our last issue. On page 74 the words "Eastern forcing," referring to baby rambler rose, should read "Easter forcing." On page 89 the captain of industry in the photograph is W. J. Elliott, not "Ellicott," and we might add that the beautiful young lady who appears in the group is Mrs. Wheeler.

6ft long—\$1 per 100; \$6 per 1000; \$11 per 2000

They cost about 10 per cent. more
than other kinds, and they are 10
times better.**STUMPP & WALTER CO. - 50 Barclay St., New York****AN INTERESTING BULB SUIT.**

The firm of C. Keur & Son, tulip and hyacinth growers in Hillegom, Holland, has filed suit in common pleas court against three Cleveland florists.

The plaintiffs say they furnished bulbs to Frank E. Bauers of South Brooklyn, Emil Heidenblut of the West Side and Henry Eickhoff, 6818 Woodland avenue, S. E., amounting to \$366.15, for which they say they have not been paid. The cases are appealed from justice court.

The bills are couched in such romantic language as:

2,000 Roman hyacinths, so much. 100 Gertrude ditto, so much. 100 King of the Blues ditto, so much. 500 Kaiser-kron tulips, so much. 1000 La Reine ditto, so much. 100 Blushing Bride gladiolas, so much.

The Cleveland florists won the cases in justice court on the ground that the bulbs were decayed.—*Cleveland Plain Dealer.*

BAMBOO STAKES

PREPARE FOR CHRISTMAS

Novelties always sell during the holidays. If you have not already grown them, try some Pink or Rose SPECIOSUMS. If potted in July will flower for Thanksgiving and Christmas. Always useful either for cut flowers or plants. Ask the leading florists in Pittsburgh, Cleveland, Detroit, Buffalo, or around New York City. Order today. Will ship any time. Cold storage Lilium longiflorum take about two months to bloom from time of potting; speciosums from five to six months, so that longiflorum wanted for Thanksgiving and Christmas should be planted about Oct. 1, and speciosums in July.

ALL CASES ARE REPACKED BEFORE SHIPMENT

A WINTER TRIP TO EUROPE BY AN AMERICAN GARDENER.

(William Kleinheinz, before the Pennsylvania Horticultural Society, March 19th, 1907.)

We Germans have a saying that it is the duty of every traveler to tell a story. It is, therefore, in a sense of duty that I accepted the very kind invitation of the Pennsylvania Horticultural Society to address you this evening on "An American Gardener's Winter Trip to Europe." While I regard the privilege given me as a great honor, I fear that the pleasure will be mine rather than yours, because the trip was a hasty one, enabling me to stop merely here and there and, in most places, only to "step right in and turn around and walk right out again." But if I can in my little talk give you any hint of the pleasure I had in making the journey, then I shall consider myself pardoned for taking up your time.

Through the courtesy of Mr. P. A. B. Widener, my employer, I sailed on the Kroonland for Antwerp, on November 21st, and after an enjoyable but uneventful trip of ten days arrived on the first of December. Antwerp is interesting to the traveler rather than to the gardener, and so I journeyed after a little tarry on to Brussels.

The weather was of the sort water lilies like—rain, more rain, and still more rain—so that my sight-seeing was restricted to the Botanical Garden in Brussels. Perhaps it was the bad weather, perhaps my expectations were too great—at any event I was disappointed in the far-famed Gardens. They do not seem to be maintained to the standard I looked for. But at Ghent I was charmed; charmed from the moment when I alighted from the train. The passenger hall is magnificent. Under a great glass shed, just outside of which the train stops, there are passages of immense size. On either side and through the centre, along those passages, are great grass plats planted with the choicest flowers and not a few immense palms—all this even though the December days had arrived. Contrast December days in this neighborhood with those in beautiful Ghent.

The World's Finest Establishments.

My first objective point was the establishment "Société Horticole Gandtoise." I had the pleasure, here, of meeting the head gardener, Mr. E. Wartel, and through his courtesy I was enabled to visit some of what I believe to be the world's finest establishments for growing palms, azaleas, and assorted stove plants. Mr. Wartel himself has the finest and most wonderful collection of anthuriums it has ever been my good fortune to see. He kindly furnished me with address of such standard commercial places as those of Mr. Jules de Cock, Mr. Miller Richard, and others—all elegant and all of mammoth size.

In these places the very first step you take shows evidence of good management. Everything is neat and clean as on shipboard; the plants are all in the pink of perfection. The general cultures are palms, especially *Kentia Forsteriana* and *Kentia Belmoreana*, azaleas, bays (*Laurus nobilis* and *Laurus cerasus*), *Acacia armata* and

Acacia verticillata, *Araucaria excelsa*, and a wide variety of stove and other plants.

On the following days I was equally fortunate in meeting Mr. Oscar de Reave, of Mt. St. Amand Nursery. Mr. de Reave was recently in the employ of the H. A. Dreer Company at River-ten, and was of most valuable assistance to me. He enabled me to visit all the important places about Ghent, which I had not up until then inspected. It may be of passing interest to say that through Mr. de Reave I was able to see the place where the well known Azalea *Vervaeana* originated. In a short time Mr. de Reave will be able to supply the newest azalea, a splendid white *Vervaeana*. Should any of my gardener friends get to Ghent I am sure Mr. de Reave will receive them the same as he did me.

Culture of Azaleas.

Perhaps it may be of interest to have me say a few words about the way azaleas are cultivated in Belgium. For Grafting, the pink Azalea indica is used. The grafts are propagated by cuttings from December 1st and grown for a year in small pots to single stems. They will make a growth of from 10 to 18 inches in the season. After grafting in December the plants are plunged in a propagating bed with sufficient bottom heat, and close to the glass, until they begin to grow vigorously, after which they are removed to a suitable house. In spring, as soon as the weather is safe, the young plants are set out in beds, where they are allowed to remain until fall. At this time the young plants, as well as the old ones not sold, are lifted and placed on benches in shaded houses. As soon as outside work is over, the azalea grower starts in to remove all the flower buds and to trim the plants into shape. The plants are either potted up or planted out in benches as close as possible, and are kept there all winter in a temperature a trifle above the freezing point. When the weather again moderates they are planted out in the open ground, in beds about five or six feet wide. Of these plants, the strongest are sold in fall, according to the sizes wanted, and the remainder go through the course of indoor treatment as described. To describe the rich, black soil with which the Belgian azalea grower is favored would be to waste your time—every gardener knows what a wonderful, rich soil it is.

Sander's Marvellous Collection.

After leaving Ghent I spent an entire day at the establishment of F. Sander & Son, at Bruges. It is the largest and most admirable place I have ever seen. Mr. Glibert, the head gardener, was kind enough to show me every nook and cranny of the immense place, and he kept me on the constant move from 9 o'clock in the morning until 6 o'clock at night. There are houses—yes, dozens of houses—filled with orchids. Of cactileas there is a range of at least fifteen houses. Another range is devoted solely to cypripediums, and there are at least ten houses given over to diverse orchid seedlings. Among the cypripediums I particularly noted "Cypripedium Curtisii Newbillo," as Mr. Glibert called it. It is a new importation, but he has thousands of

specimens. The upper sepal and petals much resemble *Cypripedium Lawrenceanum*, but the pouch is a fine dark red. I regard it as a very striking variety, and recommend that it should be extensively grown.

The next range consisted of I do not know how many houses, but certainly a great number filled with palms of all sizes. Then, there are houses with azaleas, with crotons, and with stove plants. From range to range we went, until our trip finally terminated at the monster sheds for wintering bay trees. Thousands were here to be seen, from the smallest to monster standards, and in all shapes, standards, pyramids and columns. All were in perfect condition. In passing I noted especially a new croton seedling of the type of Craigii, but with larger foliage and of a more vigorous growth.

I must pay this tribute in closing to Mr. Glibert (who, by the way, was the associate of our friend, Paul Heubner, when he was at Van Houtte's) that he is the only man who ever caused me to become tired of looking at plants. It was because of his exceeding great kindness and his absolutely untiring enthusiasm, that I did not visit a greenhouse in my next stopping place, Berlin.

A Tremendous Palm House.

In fact, the only house I visited after leaving Belgium was the Palm Garden at Frankford-on-Main. The tremendous palm house there is unquestionably a wonder of the horticultural world. You are charmed with the arrangement the moment you enter. The mammoth specimens are planted on both sides of the main walk, leaving a delightful alley, palm-bordered and palm-leaf roofed.

As a substitute for the conventional lawn there is used *Selaginella denticulata*, and it is magnificently arranged, grown and kept. At the rear is a monster backing of palms, half hiding a rockery with running water. Attached to the palm house are side houses filled with cold house plants, such as camellias, azaleas, pittosporum and many others. Quite recently there was added a new range of show houses. The centre house is planted similarly to the palm house, but perhaps because I had seen the great palm house first the new one looked somewhat empty and unfinished. Side houses are attached and these are used especially for stove plants and for orchids. All are most attractive. In the Palm Garden are, in addition, a range of growing houses, but these are not conspicuous, and since they are used only for growing to supply the show houses they are not open to the public.

By this time I felt that my ability to take any new impressions had been exhausted, so I spent a few days, all too short, in visiting relatives and friends, and then I sailed for the best country on all the globe, the dear United States which, I do believe, I never loved so much as when I heard the welcome of friends and saw again the old, familiar faces. If you want to appreciate more than ever you did before your own country, take a trip abroad. If you do, I know that you will be at least able to speak more entertainingly than I have, of "An American Gardener's Winter Trip to Europe."

FLOWER MARKET REPORTS

BOSTON The supply of carnations and roses has shortened up materially, many growers having thrown out their blooming stock and replanted, and the market is greatly relieved in consequence. The overstock which existed hitherto is reduced to moderate dimensions and prices are firmer, but there is no increase in the demand as yet. Sweet peas are coming in far greater supply than the market can care for and there is no staple value on this item. A few asters are in evidence—the vanguard of a vast supply which is in course of development for this market. There is practically no change in the selling price of anything from quotations of last week. Buyers of small lots must expect to pay quoted values but a customer for large shipments can rely upon getting due consideration.

BUFFALO Not much of an improvement in the market the past week as far as trade is concerned. A little floral work flurry occasionally, which is about all that the retailers figure on, keeps them busy at times, while the wholesaler is looking for an outlet of the superfluous supply which accumulates from day to day. Good roses are in demand, also lilies now and then. Japanese and long-florum lilies have been in good supply, also sweet peas of fine quality, but too many of the latter. Prices are rock low and sales slow. Carnations are still plentiful but poor in quality; greens are in good supply.

INDIANAPOLIS The market has been decidedly quiet the past week. There is abundance of poor stock and hardly enough good stuff to go around even though the demand is small. There is a fair demand for Beauties, but in general the quality is not up to what it was last year. Teas are small, off color and badly mildewed. There seems to be plenty of carnations, but of very poor quality. Asters are coming in fair. Gladioli sell well especially the lighter shades. Lilies of all kinds are abundant and slow sale. Lily of the valley seems to be hard to move. All kinds of greens are plentiful with little or no sale. Galax leaves are good property at the present time.

NEW YORK Business shows a slight improvement which, it is to be hoped, may last and the tendency of prices toward greater stability. There is, of course, a big proportion of very shabby material coming in to the wholesale market in this hot weather on which no value can be set. Such stock is never counted out and is considered well sold if sold at all. There are enormous quantities of sweet peas being received, noticeable mainly for their inferiority of flower and brevity of stem, which are rarely disposed of

other than through the medium of the garbage man. Sorry to have to tell it, but it is true. Asters are seen occasionally. Some fine Shakespeare gladioli are in evidence and one spike brings as much as ten spikes of the common red. Express charges are just as high on the red and we assume that the cost of growing is no different. Growers should not forget this.

PHILADELPHIA Notwithstanding the big influx of visitors (calculated to have been over a million all told) to this city incident to the Elks' convention, business last week in the flower trade did not rise above the normal. Arriving shipments were in somewhat smaller volume with demand about normal. Qualities are of the usual summer grade. The only stir in the placid sea was in funeral work. White roses met ready sale and cleaned up nicely. Kaiserins were in the lead of course.

BUSINESS CHANGES.

Dick Schmidt has purchased the greenhouses of Ed. Fries, Newport, Ky.

Charles Benson of Denver, Colo., has leased the greenhouses of W. C. Walters.

Louis Gresenz has bought out Mrs. A. Hertel of 150 Clybourn avenue, Chicago.

Max Rudolph, Cincinnati, O., has purchased his partner's interest in the business.

The flower stand in the theatre building, Moline, Ill., will be carried on hereafter by C. W. Sandstrom.

Ed. Fries will hereafter carry on the Highland avenue greenhouses at Newport, Ky., in his father's place.

Ben Boldt, Denver, Col., has moved from 16th street to W. 29th street, August Schenkel's establishment.

C. M. Wagner will move from the Schofield building to Euclid avenue, Cleveland, O., about September 1.

John Eddy & Sons, Westmount, Can., have bought land at Melrose Lawn and are erecting three new houses. They also purchased the greenhouses of the Campbell estate, selling a part of them later to Camille Gratton, who has been foreman for Mr. Campbell for the past four years. Mr. Gratton will start in business at St. Laurent where he has purchased land.

Wm. Kiss, formerly at Fitchburg, is now located at Manchester, Mass.

PHILADELPHIA NOTES.

Charles S. Grey has resigned his position with Edward Reid and is now associated with his brother in another line of business.

Leo and Arthur Niessen of the Leo Niessen Co., left for their vacation on Monday the 22d. Clarence J. Watson, their manager, also departed on the same date for a well earned rest. The acting captains of the business at present are Ralph Shrigley and W. Niessen.

Jno. G. Gardner has secured the contract for the landscape work on the Sharpless estate at West Chester.

Edward Campbell is doing the landscaping on an important private institution near Wilmington, Del. Nearly all the landscape men are unusually busy this summer in this neighborhood.

Miss Hart of the accounting department of the Pennock-Meehan Co., was married on the 19th inst. to Clarence S. Platt of Chester. Mrs. Platt was a most efficient business woman and will be greatly missed among her old associates.

TOLEDO, O., NEWS.

All our florists are now very busy fixing up their houses, whitewashing, glazing and planting. They all look back upon a season which has been very prosperous from every standpoint. There are even now belated orders for beds of geraniums and porch boxes. This is later than they have ever had such orders before.

E. Kuhuke is putting up three houses, each 22x100, which are to be filled with carnations. He has just finished planting his chrysanthemums and potting cyclamens is now in order.

George Bayer is trying to get his 20-acre plot in shape; so far asters and carnations are planted to a very large extent, while most is in garden truck. Krueger Bros. are building a large cellar under their palm house. John Gratopp is a great believer in linking flowers and "truck" together; his carnation houses which are now filled have been full with cucumbers which have done well.

MOVEMENTS OF GARDENERS.

Peter Petersen succeeds Victor Schmitt as gardener for Philip Saltonstall, Milton, Mass.

A. G. Sawyer, formerly with E. R. Whitney, has succeeded Emil Anderson as gardener for F. C. Milliken, Milton, Mass.

Carl E. Kern, Mt. Kisco, N. Y., has taken the position of landscape gardener with the National Cash Register Co., Dayton, O.

John Cody occupies the position formerly filled by John Ross, gardener for Francis Peabody, Jr., Milton, Mass. Mr. Cody had been previously in the employ of Thos. F. Galvin and E. Sutermeister respectively.

NEWS NOTES.

The florists of Holyoke, Mass., will close their stores on Wednesday afternoons until September 1.

Miss Eda Birn, Nashville, Tenn., has filed a petition in bankruptcy. Liabilities, \$1,993.75; assets, none.

Thomas Carter, gardener at Exeter Rose Conservatories, Exeter, N. H., has been quite ill for two weeks.

Hail stones got in their work at Staatsburgh, N. Y., July 13, and did considerable damage among the greenhouse men.

It is reported that George Hunt, a florist of Terre Haute, Ind., has become insane, the result of frequent attacks of epilepsy.

L. Stankowicz, a florist at Niles, Ill., has begun action to recover \$15,000 from the Northwestern Gas Light & Coke Co. He states that because of faulty mains the illuminating gas has percolated through the ground and ruined his plants and flowers.

During Recess

"Hang Sorrow; care will kill a cat
And therefore let's be merry."

GARDENERS' AND FLORISTS' CLUB OF BOSTON; ANNUAL PICNIC.

The long anticipated picnic of the Boston Club is nearing its close as we go to press. About 200 of the members with their wives and children have been enjoying themselves at Dorchester Park, watching the games and romping under the shelter of the oak forest with which this picturesque park is shaded. The committee in charge of the events were J. W. Duncan, Robert Cameron, Duncan Finlayson, R. S. Edgar, M. Fuld, W. Downs, James Wheeler, Wilfrid Wheeler, H. M. Robinson. Official starter, Peter Miller, and official handicapper, Wilfrid Wheeler. In addition Kenneth Finlayson kept score for the quoits game and Mr. Flood was the power behind the megaphone through which the announcements were made. The boys' race, under 15 years, was won by W. Iliffe, George Palmer and Thos. Westwood being second and third respectively. Winners in girls' race, under 15 years, were Florence Lumsden, Harriet Coles and Florence Eisenhart. Married ladies won in the following order: Mrs. Robert Edgar, Mrs. D. Whyte and Mrs. Eisenhart. The potato race winners were Catherine Lally, Jean Westwood and Louise Eisenhart. Ladies over 16 years who sprinted 100 yards and won one, two, three, respectively, were Louis Eisenhart, Anna Robb and Jean Westwood. Boys under 15 years won out in the following order: Wm. Iliffe, Thos. Westwood and George Palmer. Boys under 7 years, J. L. McKenzie, W. Westwood and Charles Clark. Girls under 7, Edith Iliffe, Marjorie Iliffe and Ruth Cartwright. The game of baseball between the commercial and private men was won by the latter, 7 to 6. A most regrettable accident marred the quoit games, Kenneth Finlayson, who was at the post keeping score, being struck by a quoit on the side of his head, sustaining a severe cut. The remainder of the events will be duly reported in our next issue.

CHICAGO FLORISTS' CLUB PICNIC.

The Chicago Florists' Club held its annual picnic at Morton Grove, Ill., on Sunday, July 21. About five hundred florists and their wives, sweethearts and also the children made merry the whole day. Quite a number took advantage to visit the Poehlmann Bros. Co's greenhouses. Refreshments were served lavishly all day.

A guessing contest on a jar of beans made lots of fun, and when opened and counted in the presence of the people by Mrs. T. E. Waters the closest guesser was found to be E. C. Pruner, with the following as next, the second prize being divided between Miss M. Klunder, Mrs. C. A. Klunder, Al. Ebling and Miss C. Eisman. The tug of war was a heated contest, the retailers winning by a small margin. The ball game, retailers vs. wholesalers, resulted in a score of 5 to 2—6 innings. The other events were as follows:

Races—Girls, 10 years and under, 1st, Elsie Phifer; 2d, Madeline Bruns; 16

years and under, Alma Quirin, Manan Garland. Boys, 10 years and under, Ed. Flabin, Geo. Loutsh; 16 years and under, Fred. Schnapps, Earl Poehlmann. Young ladies, Annette Dupree, Mary Dupree. Married ladies, Mrs. B. Belcher, Mrs. C. A. Klunder. Trade, men, Al. Henderson, George Asmus Sack, Al. Ebling, Fred. Schnapps; Poehlmann Bros. employees, Geo. Sturin, Bert Dupree; Peter Reinberg's employees, John Hoser, L. Hoepner; Bassett & Washburn's employees, J. Einweck, A. Einweck; Geo. Reinberg's employees, A. Reinberger, B. Belcher; E. F. Winterson's employees, J. J. Shinaek, C. W. Scott; wholesale florists, H. Hirsch, Ollie Zech; Vaughan's employees, E. Fourth, Al. Henderson. Between the winners of the last mentioned seven races, H. Hirsch, Ollie Zech.

Hop, step and jump—Chas. Balluff, L. Blind.

Running broad jump—H. Hirsch, P. Miller.

The florists of Springfield, O., held their picnic at Eichholz park on July 16. J. M. Good and C. W. Schmidt had charge of the arrangements. In spite of the showers the program of sports was well carried out.

Special Philadelphia Convention Number

Will Be Issued August 17.

It will reach the best trade at the convention and all through the country.

GARDENER wishes position on private place as head; competent in all branches of gardening, landscape work and improvements; care of live stock; capable of taking full charge; age 38; married, two children; best of references. Address Gardener, care of HORTICULTURE.

Obituary

Samuel Henshaw.

HENSHAW. At West New Brighton, Staten Island, on July 22, 1907. Samuel Henshaw, aged 73 years. Buried from his late residence, Egbert Ave., on Wednesday evening, at eight o'clock.

The above announcement clipped from the New York daily papers will bring a sense of sadness and loss to

THE LATE SAMUEL HENSHAW.

many who knew and loved this old time gardener who has now passed on to his rest after many weary months of painful illness. Mr. Henshaw was possessed of a happy, hopeful disposition, which, even in his sickness, never deserted him and which stayed with him to the end. His was a genial personality; his heart beat responsively whenever or wherever he came into contact with his brother gardener. Vigorous mentally and physically he was found always wherever the craft congregated—at meetings and exhibitions and always ready to lend a hand when there was anything to be done. He was one of the most active members of the old New York Horticultural Society, and later of the New York Florist Club, serving the latter as president for one term, also a member of the S. A. F. up to the time of his death.

Mr. Henshaw was born in Manchester, England, 73 years ago and came to this country fifty years ago. He did fine landscape work on many public and private grounds, including those of Wm. Rockefeller, Bronx Botanical Garden, Vassar Hospital and Columbia University. His last work was an exploring trip to the West Indies in search of plants for the Bronx Botanical Garden.

M. Louis Lacroix.

We regret to observe in the current number of "Le Chrysanthème" the announcement of the death of M. Louis Lacroix. Twenty years ago his name was well known to every enthusiast in Europe and probably in America, for he was a raiser of new chrysanthemums that figured prominently at most of our shows with conspicuous success.

Some of the best Japanese of his

raising that we remember were Mlle Moulis, M. Ardene, Parasol, Tendresse and Mlle Lacroix, which last named still remains in cultivation here. Then there was Viviani-Morel, a famous flower that held a foremost place in every European exhibition for many years and is not quite extinct yet. Fabian de Madiana, a remarkable variety of the Japanese Anemone type, was another and several others of the same section. A very important addition to the Incurved section Jeanne d'Arc, was one that helped M. Lacroix's reputation. Like M. Delaux and M. de Reydellet, his reputation as well as that of several of his other contemporaries was somewhat dimmed by the advent of M. Calvat, but he rendered valuable service to the cause in his day and generation. M. Lacroix died at the age of 66 years and was one of the florists of whom the town of Toulouse may well be proud.

C. HARMAN PAYNE.

London, Eng.

ROSE PLANTS BY MAIL.

(P. Joseph Lynch before the Florists' Club of Philadelphia, March 5th, 1907.)

While the subject assigned me only treats of roses by mail, I shall, nevertheless, take the liberty of extending the scope to the plant mail order trade in general. At first glance it might seem that this subject was too prosaic to admit of little that is new and interesting, especially to those not engaged in the mail order business. There is, however, much in common between the mail trade man and the numerous other branches of the florist trade. From the most humble beginning the mail order trade, beset as it has been with so many vicissitudes, has made marvelous strides. Very few of us realize the great work that is being done in this branch of our trade, a work that has brought untold advantages to everyone engaged in the florist business.

The Pathfinder of the Craft.

I can do no better than to repeat the opinion expressed upon a previous occasion, that your mail order man is the pioneer and pathfinder of the craft, and he has carried the gospel of loving flowers, especially roses (and how to get them and grow them), to the most remote parts of the country, and in a measure has been the educator of the masses, those who are not in close touch with the large centers of population where the rose grown for cut flowers can make its own appeal. He has been a factor in beautifying the waste places of our land, and the great work in which he is engaged has but commenced. He has had much to combat. First of all, the skeptical public in early times refused to believe that it was possible to send rose plants, or plants of any kind safely by mail, particularly to distant points. Then, too, in the beginning it would seem that the postal laws were framed with special reference to the mail order business, to prevent it from spreading to any material extent. Thirty-five years ago the rate of postage was the same as that of letter postage. No plant was allowed to bear a label, nor was the name of the firm sending the package allowed to appear on the

outside. It would be hard to imagine a condition of affairs more discouraging than this, but the germ of the mail order business was firmly rooted, and the early pioneers kept after the Post Office Department until these obnoxious conditions were modified and placed upon their present basis. The efficiency of the mail service has been improved, and now we are allowed to send seeds, roots and plants of all kinds under the rate of the third class postage, one cent for each two ounces or fractional part thereof. While the postal authorities have done much to encourage the mail order business there is yet ample room for further reform; in fact, with the annual deficiency in the revenues of the Post Office Department it would seem that there is a great opportunity to place the Department upon a business-like basis.

Better Mail Facilities Needed.

Not until there is concerted action in the mail order trade will we secure such concessions as we should have, and could undoubtedly get by unity of movement in this direction. While I will not cite the rates of the express companies as a criterion of all that is equitable and fair, yet in some respects they are far superior to our postal rates. For example, the express company will carry 100 pounds from Philadelphia to Pittsburg for 40c., while the Post Office Department would charge \$8.00 for 100 pounds of mail matter. The express companies conduct their business upon a profitable basis, and even the railroad company provides splendid accommodations for the public in their passenger traffic at a much less rate than they charge the government to carry the mails. It seems to me that mail matter, particularly in bulk, should be carried with reference to the distance covered, just the same as passenger traffic or express rates. It might be urged that this would bring about a great deal of unnecessary confusion, but were the country divided into sections or by meridians, and have a rate of postage to each section, it would not bring about any more confusion than is incident to the selling of railroad tickets or making express rates to various parts of the country. The question is one, however, so broad in its aspect that I shall not treat it further at this time, but it is a subject that might be carefully considered by the Society of American Florists. And, too, the matter of a parcels post system similar to that in vogue in Great Britain should be sought after as a measure that would revolutionize the mail order business to a very great extent.

Some Pernicious Practices.

I do not want to be classed among pessimists, but in these days of reform there is an opportunity to apply some of it to the mail order trade. Sending roses and plants of all kinds by mail and guaranteeing their safe delivery to any post office or express office in the United States is the fundamental principle which has made the sending of plants by mail no longer a risk from the purchaser's view point. Year after year large sums of money are spent in advertising and the sending out of catalogues, and the skeptical public has been won and has confidence in the mail order man, but in the endeavor to still further increase

our business there has crept in here and there abuses which should be eliminated. Through the trade papers there has been considerable discussion as to the advisability of giving premiums with every order. The practice is a pernicious one to my mind and there is really no excuse for it. We oppose the free distribution of seeds, but in our own business we do not oppose the free distribution of plants. There should be a flat price, a price that leaves a legitimate margin of profit, then the buyer knows just exactly what he is getting and what he has to pay for. There are other abuses which could be easily modified, which would add much to the moral tone of the mail order trade, such as misleading guarantees, which seem to grow more radical year by year, and the sending out of plants that are not true to name, which to my mind is one of the most damaging practices which besets our trade. I am not an advocate of trusts and so-called community of interests, but there should be a common interest among those engaged in the mail trade to bring them in closer touch with each other and modify many of the abuses which have crept in.

The Magnitude of the Business.

The mail order trade is one of interminable detail, and a visit to an establishment at this time of year would prove a revelation to the novice. A correspondent whose "airy persiflage" is always heard above the roar and din of the battle recently paid a visit to a mail order establishment, where he was shown upwards of a million small rose plants, being sent to nearly every State in the Union and foreign countries, such as China and Japan, where, notwithstanding the trip of four to five weeks, they invariably reach their destination in first-class condition. For a person who is never surprised at anything his astonishment at the vast amount of detail involved came in the nature of a real triumph. Human nature enters largely into our trade, and it must be realized that to sell goods to an army of different individuals through printer's ink and to hold this trade, requires first of all honesty of purpose and individual care for each and every order that is sent out. The mail trade man encourages the production of novelties, especially in roses, because each year he must have a leader in the different branches of his business, and nothing is so attractive as a new rose. There have been so many disappointments in the new roses from Europe that we must depend upon our own hybridizers, and for that reason it seems proper at this point to ask earnest support for the American Rose Society. The demand for good roses is ever present. We cannot secure too many Killarneys, Richmonds, Golden Gates, Kate Moultons, Queen Beatrices and new roses of those types. The hardness of many of the Hybrid Tea class has brought about a revolution in amateur circles, because the planter of the North can have roses throughout the entire growing season and at the same time they are sufficiently hardy to withstand the rigors of the most severe winters. We should undoubtedly secure a greater variety of Hybrid Teas, and our exhibitors of new varieties should be encouraged in every possible way.

Heating The Greenhouse

thoroughly and economically during the coming Winter is the problem now engrossing the mind of the Florist who takes time by the forelock.

I am in a position to help you to the best solution of this problem. I have done it for others, I can do it for you.

It will be to your advantage to consult me and get quotations on your heating plant either erected complete or for material ready for erection.

I have the largest line of C. I. and steel greenhouse boilers on the market and can give prompt shipments.

H AND C

A MOST UN-COMMON THING

is common, common sense. If you don't believe it take a trip among your florist friends and you'll find about a third of them experimenting and testing some new fangle idea in boilers. A smooth talking chap has convinced them that any boiler that is economical for other heating, is economical for greenhouses. Let them try it out; it's costly but convincing. In the meantime, you be on the safe side and buy an H & Co. greenhouse boiler made to heat greenhouses.

Send 5 cents in stamps for boiler catalog.

HITCHINGS AND CO.

NEW YORK.

OUR SPLIT COLUMN FITTINGS MAKE THIS GIANT ARCH

The Giant Arch makes a house of wonderful rigidity. It both holds the house up and the roof down. Easy to erect, casts least possible shade and has practically no endurance limit. Put it into your house.

Send for circular particularly describing it, and remember we make every part of a greenhouse but the glass—we sell any part.

Lord & Burnham Co., Greenhouse Designers and Manufacturers, 1133 Broadway, cor. 26th St., N. Y. Boston Branch: 819 Tremont Building. Philadelphia Branch: 1211 Filbert Street.

EVERY man who has a house with valley or passage way connection, knows what an ugly, heavy proposition the usual construction makes.

Here is the U-Bar way. See how effective the outside is, how light, and entirely practical the interior is. Taken as a whole or in a more exacting, critical examination of any particular portion or part, the U-Bar construction proves itself as more nearly perfect than anything yet demonstrated by severe test. Send for that splendid book catalog so recently printed.

A Hardy Plant Garden.

Brilliant as is the display effect of the prevalent bedding-out system this method of garden planting has several defects. Much labor and expense are involved in wintering the plants—particularly when both spring and summer bedding are followed up and often the garden remains unattractive for several months of the year. On the other hand a garden of hardy plants comprising aquatics, herbaceous, alpine and rock plants, makes a charming combination and is a source of perpetual pleasure. Then the choice is such a wide one, affording flowers for every position, all kinds of soil, shade and sun, both serviceable and ornamental, that the wonder is that the bedding-out system is still with us. As the popular taste is largely created by those who cater to it, the display of a good thing being generally the needful preliminary to the demand for it, much of the blame must be imputed to our nurserymen for lack of proper display of these beautiful and interesting plants.

An ideal situation for a hardy plant garden is one which is sheltered from high winds and open to sun and air. Shrubs flowering at different months of the year, planted informally, make a beautiful background, and right in front is a charming situation for the herbaceous border.

The old method of making a border about six feet wide and planting all the taller plants in the back with a regular slope to the front, is far too formal and much too narrow, as the border of herbaceous plants is, as a rule, intended to be interesting and attractive throughout most of the year. This can be accomplished much better by having the border from 12 to 15 feet wide and the introduction of some of the taller varieties in the front, cutting out formality and avoiding the practical adoption of the bedding-out system.

Another old method on which we can improve is the planting of single plants at regular intervals. Here again much is gained by planting in large groups—not in circles or squares but of irregular shape, so that no one part of the border resembles another. The margin of a border is, as a rule, planted with box or laid with sod. A much better method for dividing the border from the walk is the use of rocks. It is immaterial about the size or form; 18 inches long by 12 deep are preferable; they should be sunk to such a depth that from 2 to 3 inches are seen above the level of the walk with a dividing rock alternately. With the adoption of this method, trimming and patching of the box or the continual use of lawn mower is entirely unnecessary and at the same time a congenial home is made

for the more rapid growing rock plants, such as aubretias, mossy-saxifrages, erysimum, iberis, ourisea, lysimachia and many others which ought to be allowed to ramble on to the walk to give informality to the margin of the border.

SOIL

As a general rule any kind of soil, well-drained and trenched to the depth of 2 feet, with the addition of barnyard manure will suit most of the herbaceous plants for several years without replanting, with the aid of annual topdressing of soil and artificial manure, when signs of growth are apparent in the spring.

The list of herbaceous plants is such a large one that only a few of the choicer ones will be mentioned. *Eremurus* is undoubtedly one of the best among the taller varieties and ought to have a place in every border. *Delphinium*, *cimicifuga*, *bocconia* and *aconitum* are all worthy of merit. Also *Incarvillea Delavayi*, *Eryngium alpinum*, *Morina longifolia*, *platycodons*, *yuccas* and *Gypsophila paniculata*. *Asperula longiflora* is one of the most useful for decorative purposes; it belongs to Greece and is much like *gypsophila*, growing to the height of 25 feet and flowers a month to six weeks earlier. *Dictamnus* and the Cambridge variety of *Monarda didyma* are also worthy of mention. Nothing affords greater opportunity for the exercise of individual taste than planting such a border to produce a good effect in color harmonies.

Through an Italian idea, the illustration of a pergola which forms the frontispiece of this paper shows an admirable entrance to a hardy plant garden. Clothed with suitable vines it makes a delightful promenade which helps to make a garden most enjoyable.

David Miller

National Sweet Pea Society

This is one of the associations due to the late R. Dean, who could not see why the rose alone should have a special society, but must inaugurate one for the carnation, the dahlia, the sweet pea, the chrysanthemum and, lastly, the potato, to say nothing of a few with a very limited membership, as the auricula and polyanthus, the pansy and viola and, I think, the narcissus; the wisdom of all this being very questionable. It cannot be denied that the sweet pea has greatly improved since the time that Brown of Sudbury sent out his first novelty, *Invincible Scarlet*, followed soon by *Invincible Carmine* and *Purple*, but a sweet pea specialist of today would not look at these and now we have names galore, in fact quite an *embarras des riches*, and doubtless, the list will be largely augmented when the report of Tuesday's show is drawn up. To the late Henry Eckford, belongs the honor of raising this annual to the rank of a florist's flower, but since his demise many enthusiasts, both professional and amateur, have taken it up and, as it is as sportive as a *zoudepelar-gonium*, we shall soon be flooded with novelties (see head line *Daily Mail*, "150 novelties"). Absurd, but the committee soon weeded these down to seven, Elsie Herbert and Nancy Perkins being about the best of these, but even then the task of the judges was no sinecure, as there is still a great sameness in many kinds, John Ingmar being synonymous with Mrs. Wm. King and being suspiciously like George Herbert. A creamy buff, Mrs. Rothero and Clara Curtis may perhaps be dubbed yellow, though it needs much exercise of the imagination—and a true butter cup yellow is yet to seek. France, America and Germany all had experts there, W. Atlee Burpee representing the States, and all agreed that the show was the finest they had attended.

The flower was exhibited in every way—close and loose bunches, sprays and in tiers of bamboo tubes, as well as glass vessels, of all forms, these being used freely in the decorated tables, while all kinds of foliage was used to display the flowers to the best advantage—that of the common asparagus especially. C. W. Breadmore, a coming pea man, took the first honors in the nurserymen's class, with a superb lot, and Mr. Stevenson won the Eckford challenge cup, H. Eckford and Mrs. Collyer being two of the best flowers in the collection. Wales seems most favorable to the proper development of this flower, and the Sutton silver challenge cup was taken by a Welshman—a good second being Mr. Jones, also Welsh (Ruabon). This pre-eminence is most likely due to the amount of soluble calcium in the soil.

Summing up, though open to correction—we think Evelyn Byatt, Gladys Unwin, Helen Pierce, Henry Eckford, Norah Unwin and King Edward VII, about the best and most useful half-dozen to be found in the show.

Thomas Burpee & Co.

Notes on Floral Arrangement

A fairly wide survey in different localities confirms the impression that improvement is needed in the average floral work turned out for profit. Good material is used up with painful uniformity. A sordid materialism is unfavorable to artistic expression; the Greek idealists were more loftily inspired; they worked not merely for glory or monetary gain but for love of art and gave not only the elements of strength and beauty to massive pillar or rounded arch but in all sorts of out of the way corners put in the most perfect and finished tracery.

Many today are crude copyists rather than cunning creators. It is true the general public are easily satisfied where flowers are concerned, but the true artist will lift the public taste to a higher plane, adding to pleasure a thrill of delight by giving the work done that indefinable grace which all intuitively feel and appreciate if they cannot state, that delicacy of touch which gives distinction to the commonest flowers when suitably handled. Ladies are all supposed to have native ability for this work, but experience does not confirm this idea; it is largely temperamental in either sex, coupled with that genius which is an infinite capacity for taking pains.

Floral art may be described as the setting of Nature in her own dress, the focusing of beauty in a way impossible to wild nature. Always due regard must be paid to the real which in the last analysis will be found to be the ideal; this note of naturalness should always predominate; originality should be encouraged but always kept subordinate to the natural idea lest gracefulness itself become grotesque. Simplicity with fidelity to nature should be ruling ideas of our art. The best effects can be made with few flowers and plenty of foliage; roses especially should always be adorned with their own foliage.

The wreath still remains pre-eminent as a memorial emblem and while great variety of styles are made, and indeed desirable, a few notes on general lines may be of practical service. A little point which gives effect, is to alternate the foundation foliage in long and then short lengths all round, thus breaking up the conventional circle; foundation flowers on the outside may be treated in the same way and the larger outstanding flowers should not be vertical but laid a little on one side in alternate and opposite ways. This obviates straight lines which Nature avoids quite as much as the proverbial vacuum. Arrange lightly but see to it that there are no gaps and that best flowers are well seen, veiling the worst with foliage or fern. White should predominate, colors being kept low and lightly veiled; cream, mauve and pink blend with white, but one shade of color both in flower and foliage is more effective than a kaleidoscopic arrangement. The whole wreath, if large, should give the ideas of richness, solidity and grace; if small, of lightness throughout.

Shower bouquets admit of much originality of treatment. A common error is to make too massive and the trails too long; both these points, however, should be adjusted according to the height of the recipient. Orchids should be arranged in natural sprays. Carnations and roses have in sweet peas a close rival; all may be done in self colors with own foliage and fern. As trails, *Asparagus plumosus* is too heavy, *A. Sprengeri* a little coarse, and *smilax* looks better than either. Flowers on trails should be graduated in size from top to bottom.

The demand for something new is a natural and a growing one, and every florist has to provide daily the element of surprise. Often one's ideas are limited and cramped by patrons who sometimes have to be indulged against one's better judgment; usually, however, buyers will take advice if they feel they are in competent hands. This is your opportunity to satisfy the desire for novelty in a natural way, the time for initiative, originality and resource. The contention now put forward is that if one loves the work and puts pains and brains into it monetary returns and public appreciation will be the worthy reward and inevitable sequence.

Edgar Elvine

Peach Blight

Peach blight has been in California for over ten years but has become prominent only during the last two or three years; but bids fair to attain the proportions of a national pest. Already this disease has become very serious, especially in some of the counties and the writer has seen large areas of the orchards completely killed by it.

The peach blight is caused by a parasitic fungus (*coryneum beyerinkii*) which is easily identified as it is found mostly on the lower branches and fruit spurs. It appears first in reddish circular or oval spots about one-eighth of an inch in diameter, to be found on the outside bark. As the disease progresses these spots become darker. Upon the badly affected branches will be seen a gummy exudate oozing out just below the buds. The

disease appears to be more destructive on the earlier varieties.

Many California peach growers have done nothing to check this disease and consequently their orchards are ruined. The blight is not especially hard to control if attended to at the proper time, but if the orchard is neglected it is only a question of a few years when the blight will gain possession of it.

The writer has carried on several experiments upon the treatment of this disease and has had excellent results from spraying early with Bordeaux mixture. Under the California conditions this material should be applied from the first to the middle of December, while good results have even been obtained from spraying in October and November.

Up to the middle of December the mycelium which is the active part of the fungus is on the outside of the bark; after that the fungus becomes active and quickly buries itself under the bark, where it lives unmolested. To try to reach it with a spray, in this condition, would be only a waste of valuable material and time. I have found that the best sprays to use are as follows:

30 lbs. of copper sulphate (blue stone)
35 lbs. of unslacked lime
200 gals. of water

I have also seen good results from the following sprays:

28 lbs. of copper sulphate (blue stone)
30 lbs. of unslacked lime
200 gals. water

15 lbs. of copper sulphate (blue stone)
25 lbs. of unslacked lime
100 gals. water

If your orchard was in a bad condition last year and although you have sprayed carefully this last year there still remains considerable blight in it, do not get discouraged but try another year, for it generally takes two or three seasons to produce a good clean orchard after it has been infected badly. When you once have it thoroughly cleaned out you should never be troubled very seriously with the blight again providing you spray thoroughly with a good standard mixture of Bordeaux and above all spray *on time*.

The gardener in the ascendant

It is very gratifying to read of the stand taken by the president of the City Club of New York with regard to the appointment of a superintendent of the parks of Manhattan and Richmond boroughs. "To convert the office into what it should be," Mr. McAneny recommends an increase in the salary and the selection of a man of high standing in the landscape gardening profession who will bring to the office the efficiency and the technical ability that it demands. This has the right ring to it and indicates

the approach of an era of rational methods in the management of the great public reservations in many cities where hitherto politics and incompetency have been in control and neither the services nor the counsel of the proficient gardener were wanted. HORTICULTURE welcomes with delight every evidence of a higher appreciation of the gardener and his art and every indication of increasing self-respect on the part of the gardener himself. As the latter gains strength the former will also develop. It is now up to the gardener to earnestly proceed to demonstrate his fitness for supreme responsibilities. "Too low they build who build beneath the stars."

Floral gawes

St. Louis is now the possessor of a wonderful "flower globe" said to be a "clever representation of the earth, all the oceans, continents, etc., being exactly represented by plants and the lines of latitude and longitude correctly indicated by strings." It stands fourteen feet high and some of the local newspapers seem to be proud of the thing and the public clamor to gaze upon it. Here is an opportunity for good missionary work on the part of the youthful horticultural society as well as of the local florist club. They are addicted to these things over in England, too, as would appear from an account recently published in the Journal of Horticulture describing the ceremony of setting in motion a floral clock at Bridlington, built by the town gardener, where thousands of people gathered to see the mayoress cut the white ribbon with a pair of silver scissors and set the clock going. It is stated that this floral time-piece is "the only one in England," which is at least encouraging. We are not informed whether these contrivances play music as they revolve but this addition would be a very simple matter and no doubt another season will see them doing this as well as other wonderful mechanical stunts.

The value of good seed

It would appear from the tenor of some of the remarks at the recent meeting of the American Seed Trade Association that the wholesale dealers are "in a state of mind" as to recent and proposed legislation concerning inspection and purity of agricultural seeds. Some express themselves as ready to welcome the closest scrutiny; others can see little in the proposed methods but meddling and persecution, and are particularly severe in their criticism of the State Experiment Stations; all emphasize the necessity of extreme caution in the adoption of methods and selection of officials in the campaign for seed purity—so called. It is our belief that there are no people more sincerely in favor of good seeds than the seedsmen; quality rather than price is the foundation on which they must make their bid for confidence and the assumption that they are disposed to practice or condone adulteration does not appear to be borne out by either the logic or the facts in the case. Has any one ever seen grass seed of 100 per cent. purity? We think not. One ultimate result that should be aimed at is the education of the farmer to a proper appreciation of the vital importance of good seed to him from a pecuniary point of view and of the small country dealer to a realization that cheapness is of small consequence as compared with quality. Of the higher grade grass and clover seeds there is never any surplus. Every pound of it is in demand and naturally commands a good price, but every seedsman knows and every farmer should know that it is well worth the difference.

AFTER ADJOURNMENT.

Referring to the flower show of the Elberon Horticultural Society, the Long Branch Record says that "no other resort on the Atlantic coast could have such a show. None of the other places have either the flowers or the horticulturists." This is pretty strong talk. We rather like it. The community that hasn't got the courage to blow its own horn will run to seed before any other community will butt in to do it for them. Whoop'er up for Long Branch.

A correspondent of the Journal of Horticulture advises young gardeners who may be out of employment to take a hand at floral decorating for some of the large floral establishments in London and believes that any young gardener of an observant nature could not fail to learn much to his advantage. We agree, but are at loss when we read further down that one smart young gardener, graduated from such a position, "now holds a horticultural lecturer's position in New York at a very good salary" and we wonder where the young man can be, as we have never heard of a position of this sort in New York or elsewhere.

The National Carnation and Picotee Society of England announce that the old system of exhibiting carnations in a "dressed" state is not to be insisted on invariably in the future and the conditions of the schedule have been modified so as to give the same encouragement to exhibitors of undressed as of dressed blooms, in the hope and belief that this will considerably increase the interest in and the number of exhibitors. "Dressing" is a process unknown to American exhibitors and unfamiliar to most carnation exhibitors in this country. From our viewpoint the English society has acted wisely in letting down the bars.

A gardener, writing in the Journal of Horticulture notes that the judging at flower shows has not kept pace with the improvements in other departments of the horticultural world. He refers approvingly to the system in use in certain instances, of cards on which are put down the record of points of superiority, so that competitors, spectators and all interested have the satisfaction of knowing at once the relative values of the exhibits, and recommends their general adoption as a means of avoiding the criticism, ill-feeling and selfishness displayed after the awards have been made. It is a good idea to acquaint the unsuccessful competitor with his shortcomings as they appear to the judges' eyes. Moreover, any innovation tending to give useful information to the visitors at a horticultural exhibition is worthy of trial.

MOVEMENTS OF GARDENERS.

W. P. Mahan has taken a position with W. B. Dinsmore, Tuxedo, N. Y., as head gardener.

William Hayes, gardener to Mrs. George B. Nickerson, Dedham, Mass., has gone to Ireland with his family for a six weeks' trip.

GREENHOUSES AND ROSE HEDGE OF JOSEPH HEACOCK.

JOSEPH HEACOCK.

Herewith is a portrait of one of the eminent plant growers of Philadelphia, whom the convention visitors will be privileged to meet and whose services, as chairman of the hotel committee of the Florist Club of Philadelphia, will, no doubt, have as important a bearing on the comfort of the visitors as those of any other individual connected in any manner with the great event. Mr. Heacock needs no introduction to the majority of our readers for has he not been supplying them with palms of unexcelled perfection for 10, these many years, and have they not been well aware of the roses from that Wyncote establishment which have been scooping so many first prizes at the exhibitions? As heretofore, Mr. Heacock will make a fine display at the trade exhibition of the S. A. F. in Philadelphia. Read his advertisement in this issue of Horticulture.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS

Preliminary Program of the 23rd Annual Convention and Exhibition at Philadelphia, Pa., August 20-24, 1907

OFFICERS FOR 1907.

PRESIDENT—Wm. J. Stewart, 11 Hamilton Pl., Boston, Mass.
VICE-PRESIDENT—John Westcott, Ridge and Lehigh Aves., Philadelphia, Pa.
SECRETARY—P. J. Hauswirth, 232 Michigan Ave., Chicago, Ill.
TREASURER—H. B. Beatty, Farmers Bank Bldg., Pittsburg, Pa.

DIRECTORS.

For one year—E. V. Hallock, Queens, N. Y.; W. H. Elliott, Brighton, Mass.

For two years—F. H. Traendly, New York City, N. Y.; Theo. Wirth, Minneapolis, Minn.

For three years—Samuel Murray, Kansas City, Mo.; J. K. M. L. Farquhar, Boston, Mass.

State Vice-Presidents.

Alabama—E. A. Beaven, Evergreen.
 California—Hans Plath, San Francisco.

Colorado, J. A. Valentine, Denver.
 Connecticut—Peter Zuger, Hartford.
 Dist. of Columbia—W. H. Ernest, Washington.

Florida—C. D. Mills, Jacksonville.
 Georgia—L. A. Berckmans, Augusta.
 Illinois, N.—Geo. Asmus, Chicago.
 Illinois, S.—Frank L. Washburn, Bloomington.

Indiana—J. A. Evans, Richmond.
 Iowa—W. A. Harkett, Dubuque.
 Kansas—Oscar Roehr, Topeka.
 Kentucky—Aug. R. Baumer, Louisville.

Louisiana—M. Cook, New Orleans.
 Maryland—Wm. Weber, Oakland.
 Massachusetts—E. L. Pierce, Cambridge.

Michigan—W. E. F. Weber, Sault Ste. Marie.

Minnesota—John Monson, Minneapolis.

Mississippi—S. W. Crowell, Rich.
 Missouri, E.—W. C. Young, St. Louis.

Missouri, W.—Geo. M. Kellogg, Pleasant Hill.

Nebraska—Geo. H. Swoboda, Omaha.
 New Hampshire—Aug. Gaedeke, Nashua.

New Jersey—C. H. Totty, Madison.

New York, E.—Chas. Lenker, Freeport. W.—Chas H. Vick, Rochester.
 N. Carolina—J. Van Lindley, Pomona.

Ohio, N.—Geo. Bayer, Toledo.
 Ohio, S.—J. B. Heiss, Dayton.

Pennsylvania, E.—P. J. Lynch, West Grove. W.—E. C. Reineman, Allegheny.

South Carolina—C. A. Moss, Spartanburg.

South Dakota—E. C. Newbury, Mitchell.

Tennessee—C. L. Baum, Knoxville.

Virginia—H. Brown, Richmond.

Washington—Amv K. Luffman, Spokane.

West Virginia—C. P. Dudley, Parkersburg.

Wisconsin—Fred Holton, Milwaukee.
 Ontario—J. H. Dunlop, Toronto.

Botanist, Prof. L. H. Pommel, Ames, Iowa.

Pathologist, Dr. B. M. Duggar, Columbia, Mo.

Entomologist, A. H. Kirkland, Beacon Building, Boston, Mass.

Superintendent of Exhibition, David Rust, Horticultural Hall, Broad and Locust Streets, Philadelphia, Pa.

Sergeant-at-Arms, Harry A. Bunyard.

Plant Registration in charge of Secretary.

Legislative Committee—Benj. Hammond, Fishkill-on-Hudson, N. Y.; L. B. Coddington, Murray Hill, N. J.; Wesley Greene, Des Moines, Iowa; E. A. Moseley, Washington, D. C.; Patrick Welch, Boston, Mass.

Committee on Convention Sports—Wm. Graham, Philadelphia, Pa.; A. B. Cartledge, Philadelphia, Pa.; J. J. Beneke, St. Louis, Mo.

Transportation.

A reduced rate of one and one-third fare for the round trip on the certificate plan has been granted by the Trunk Line Association (in whose territory Philadelphia is situated), and up to the time of the printing of this circular this reduced rate has been concurred in by the New England Passenger Association, and the Eastern Canadian Passenger Association.

The following directions are submitted for your guidance:

1. Secure tickets at full fare for the going journey, and when purchasing same request a certificate from the ticket agent. Do not make the mistake of asking for a "receipt."

2. Present yourself at railroad station for ticket and certificate at least thirty minutes before departure of train.

3. Certificates are not kept at all stations. If you cannot secure certificate at your station, agent will inform you where same can be secured, and you can buy a local ticket thence, and there take up a certificate and through ticket.

4. On your arrival at the meeting, present your certificate to P. J. Hauswirth, Secretary.

5. The special agent of the Trunk Line Passenger Association will be in attendance on August 20th, 21st and 22nd to validate certificates. You are advised of this, because if you arrive at the meeting and leave for home prior to the special agent's arrival, you cannot have the benefit of the reduction on the home journey. Similarly, if you arrive later than August 22nd, after the special agent has left, you cannot have your certificate validated for a reduction returning. Under the rules of the Association each certificate holder will pay the joint agent 25 cents for validating his certificate.

6. Be sure to obtain a certificate, as it is necessary to have at least one hundred certificates to secure the reduced rate.

7. You will be entitled, up to August 28th, to a continuous passage ticket to your destination by the same route over which you made the going journey at one-third the limited fare.

The Central Passenger Association

will not join in the reduced rate of a fare and one-third, for the reason that a number of States have provided by a law for a standard rate of two cents per mile, particularly in the territories covered by this association. It has, however, made a special concession to our Society in that it will sell a through ticket to Philadelphia at a rate of two cents per mile in the territory covered by this Association, and at the reduced rate of a fare and one-third through the territory covered by the Trunk Line Association. This special concession is only for those attending the session and not for the general public. The special tickets can be obtained on card orders secured direct from P. J. Hauswirth, Secretary, 232 Michigan Ave., Chicago, Ill. The Central Passenger Association will furnish the Secretary with these card orders, and should you reside in the territory covered by the Central Passenger Association and desire to take advantage of this special concession you must obtain from the Secretary a card order.

In writing for card orders be sure to give the number required, as each person must have one.

These special tickets will be on sale only on August 17th and 18th. It is suggested that you obtain information from the railroad officials in your respective cities relative to the rate as issued by all railroads covering the Jamestown Exposition.

The Trade Exhibition.

The trade exhibition will be located in Horticultural Hall, corner Broad and Locust streets. Growers of plants, seeds, bulbs, shrubs and trees, dealers in florists' supplies, greenhouse requisites, building material for greenhouse construction, heating apparatus, etc., can here meet the best buyers in the profession.

N. B.—Exhibitors are reminded that the duties of the judges are limited to the consideration of exhibits and to the making of awards to novelties and improved devices only. Exhibitors are required to make previous entry of all such exhibits with the superintendent in writing. Full rules and regulations, together with diagrams of the exhibition hall, may be obtained from David Rust, Horticultural Hall, Broad and Locust streets, Philadelphia, Pa., superintendent, to whom all applications for space should be made.

Payment of Dues.

It is important that all members forward their dues to the secretary in advance, as the possession of a badge and a membership receipt for 1907 is absolutely necessary before any individual can sign the roll book and receive invitation cards for any entertainment provided. On receipt of \$3.00 from those who have paid the membership dues for 1906, or of \$5.00 from all others (in accordance with our laws), the proper certificate and the badge for 1907 will be mailed from the secretary's office. Be sure to bring with you to the session your receipt for dues for 1907. The name and address of the secretary is P. J. Hauswirth, 232 Michigan avenue, Chicago, Illinois.

PROGRAMME.

The sessions of the convention will be held in the "Broad Street Theater," opposite Horticultural Hall.

Opening Session, Tuesday, August 20, 1907, 2 P. M.

The members will be welcomed on behalf of the State by Hon. Edwin S. Stuart, Governor, and on behalf of the city by Honorable John E. Reymann, Mayor. W. W. Castle, of Boston, Mass., will respond to the welcoming addresses. The annual address of the president of the society, and the reports of the secretary, treasurer, state vice-presidents, committees and other officials will be presented.

Judging Exhibits.

Immediately after the close of the opening session the judges of the exhibits will examine same and prepare their reports upon the novelties and new inventions in the trade exhibition.

President's Reception, 8 P. M.

The president of the society will receive the members at 8 P. M. in the "Broad Street Theater" under the auspices of the Philadelphia Florists' Club. Music and refreshments.

Second Day, Wednesday, August 21, 9.30 A. M.

Judges of exhibits will present reports. Addresses will be presented on the following subjects:

Hardy Shrubs—How to Plant and Treat Them. S. C. Moon.

The Effective Arrangement of Hardy Perennial Plants. Ernest Hemming.

Hardy Bulbs and Tuberous Rooted Perennials. E. V. Hallock.

Bedding Plants—Where and How to Use Them. A. Frey.

Selection of Next Meeting Place and Nomination of Officers.

The selection of the location of the next meeting (polls open one hour), nomination of officers and roll-call of states for nominations for state vice-presidents for next year will take place at this session.

Ladies' Auxiliary.

The Ladies' Auxiliary will convene in session.

Trip Up the Delaware.

On invitation of H. A. Dreer, Incorporated, the society will board the excursion boat leaving Arch street wharf at 1 P. M. sharp, for a trip up the Delaware River to Riverton, N. J.

Shooting Tournament.

The team and individual shooting contest will take place at the Florists' Gun Club grounds, Wisconsin. For entries and information, address A. B. Cartledge, 1514 Chestnut street, Philadelphia, Pa.

Wednesday, 8 P. M., Illustrated Lecture.

An illustrated lecture will be given by J. Otto Thilow in the "Broad Street Theater," the subject being "The Flora of Yellowstone Park and Puget Sound."

Discussion of Recommendations in President's Address.**Reports of Special Committees.****Third Day, Thursday, August 22, 9.30 A. M.**

Subjects for discussion at the morning session will be "Horticultural Education":

Horticultural Education in the Common Schools. V. Hallock.

Horticultural Education in Agricultural schools. Theo. Wirth.

Horticultural Education by Horticultural Societies and Clubs, including a review of the work of the Boston Landscape Class. John K. M. L. Farquhar.

Discussion on Above Subjects.**Election of Officers, 10 A. M.**

During the discussion on the above subjects as presented covering Horticultural Education the election of officers for 1908 will take place, the polls being kept open one hour, and until all legal voters in line at that time shall have an opportunity to cast their votes.

Question Box.

The Question Box will be opened and general discussion had upon the subjects therein referred to.

Bowling Tournament.

The bowling contests for teams representing the various Florists' Clubs will take place at 1.30 P. M.

The ladies' bowling contest will take place at 2 P. M.

Location of alleys will be announced later. For further information inquire of Wm. Graham, chairman Committee on Bowling, 104 South 13th street, Philadelphia, Pa. Handsome trophies will be provided.

Annual Meeting Florists' Hail Association of America.

Broad Street Theater, 3.30 P. M.

Thursday Evening.

Session open 7.30 P. M.

The National Flower Show.

Discussion will be had regarding the National Flower Show to be held in 1908.

Unfinished Business.

Two-minute talks by members on general subjects of advantage to the society.

American Carnation Society.

Immediately after the adjournment of the evening session a meeting of members of the American Carnation Society will be held.

Friday, August 23.

The program as arranged for the fourth day, Friday, is as follows:

10.00 A. M.—The society will be the guests of the Philadelphia Florists' Club, at "Belmont Mansion," Fairmount Park.

The visiting ladies will be taken to Willow Grove and there entertained. Special announcements covering entertainment will later be made by the Philadelphia Florists' Club.

Saturday, August 24, 10 A. M.

Meeting of Executive board.

Officers of the Philadelphia Florists' Club.

President, S. S. Pennock; Vice-President, Fred. Hahman; Secretary, David Rust; Treasurer, J. William Colflesh.

Chairmen of Convention Committees.

Exhibits, David Rust, Horticultural Hall; reception, S. S. Skidelsky, 324 N. 24th street; hotels, Joseph Heacock, Wyncote, Pa.; entertainment, Fred. Hahman, Harrowgate Lane; finance, C. D. Ball, 3400 Rhawn street; ladies, C. D. Ball, 3400 Rhawn street; bowling, Wm. Graham, 104 So. 13th street; shooting, A. B. Cartledge, 1514 Chestnut street.

P. J. HAUSWIRTH, Secretary.

ST. LOUIS TO PHILADELPHIA.

In the rates and routes given Mr. Wm. C. Young, State-Vice President, S. A. F., the \$25 rate quoted was in error to Jamestown via Philadelphia, as this ticket does not carry any stop-over.

The sixty day, \$30.60 ticket with 10-day stop-over at Philadelphia via rail to Norfolk, stop-over at Norfolk, via boat to Washington, stop-over at Washington, Baltimore, Harrisburg, Pittsburgh, etc., is the best ticket and will be used largely by the florists.

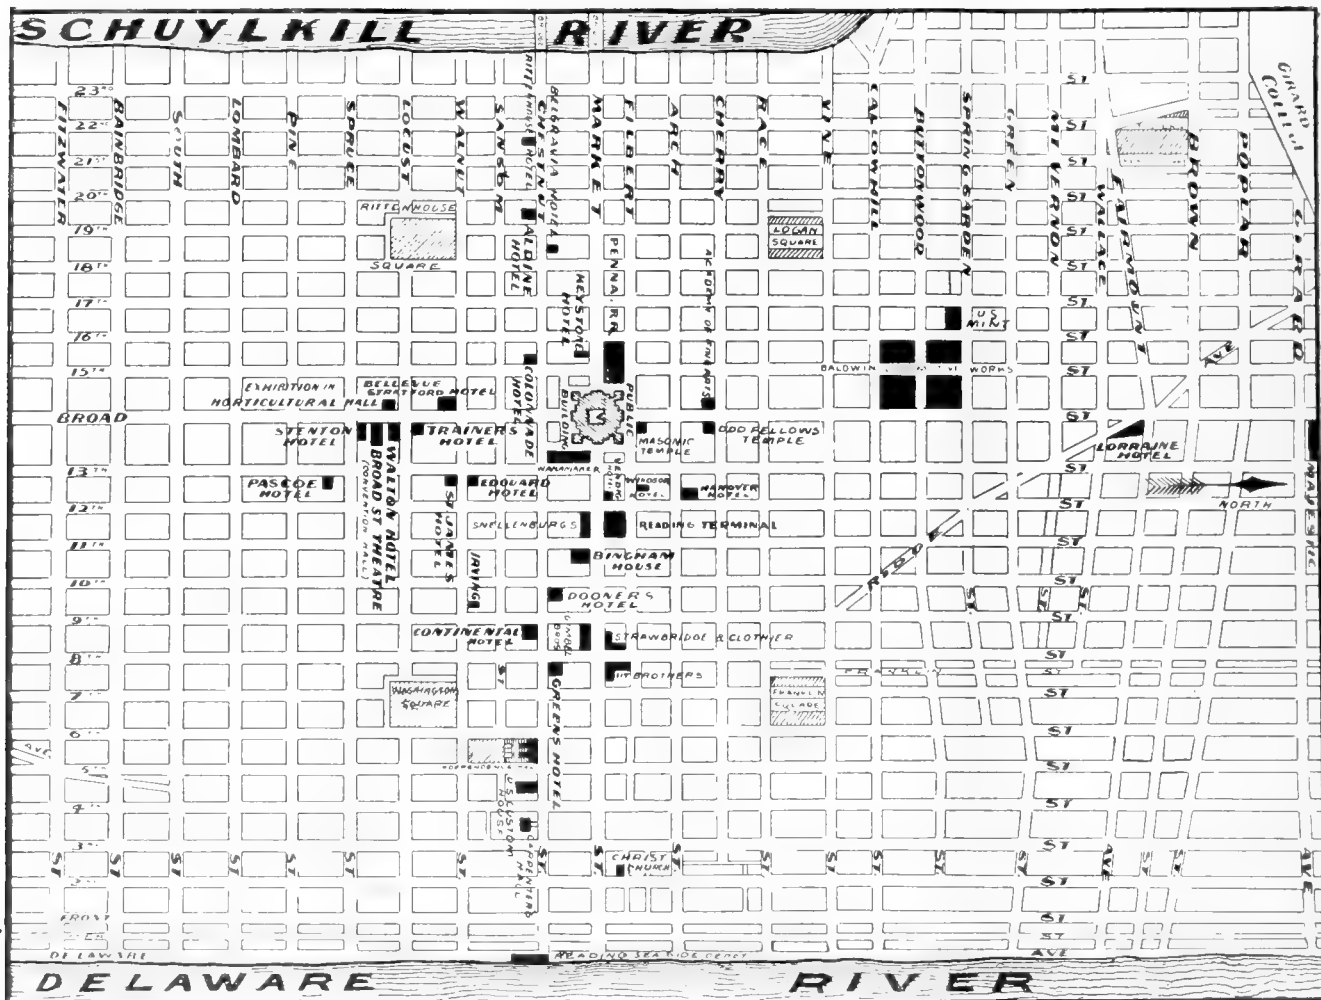

Fifteen-day excursions to Atlantic City, etc., leaving Buffalo at 9 A. M., and 9 P. M., Aug. 16., and allowing a 10-day stopover at Philadelphia on the going trip are announced by the Pennsylvania railroad. This may be found advantageous for some who may feel inclined to start for the S. A. F. convention as early as Aug. 16.

The S. A. F. convention is promised a delegation of twenty-five at least from Detroit, while nearby towns may furnish almost as many more participants.

ELBERON (N. J.) HORTICULTURAL SOCIETY.

The second annual flower show of this Society was opened on July 24 with a characteristic speech by the Mayor, introduced by President Wm. D. Robertson. R. H. Hughes was manager of the exhibition and he proved to be "the right man in the right place." Among the prominent commercial firms represented in the displays were H. A. Dreer, Phila.; Lager & Hurrell, Summit, N. J. The gardeners on the summer estates of Long Branch, Deal, Asbury Park and Rumson were all in evidence, among the large exhibitors in this class being W. D. Robertson, Fred Dettinger, Peter Murray, Jas. Kennedy, Anthony Bauer, Benj. Wyckoff, Aug. Grieb, Jas. Dowlin, J. H. Gramman and Eugene O'Rourke. The judges were Alex. McKenzie of Glen Cove, Wm. Turner of Oceanic and Thos. Brannigan of New York.

DIAGRAM OF STREETS AND HOTELS IN VICINITY OF S. A. F. CONVENTION HEADQUARTERS, PHILADELPHIA.

LIST OF CONVENTION HOTELS.

The Hotel Committee take pleasure in recommending the following Hotels for the accommodation of visitors at the August Convention.

Names	Location	American or European	Can Accommodate	Rate per Day.
Aldine	1914 Chestnut St.	Amer. & Eup.	500	Amer., \$4.00; Eup., \$2.00
Belgrave	18th & Chestnut Sts.	European	150	\$2.50 with bath.
Bellevue-Stratford	Broad & Walnut Sts.	...	350-400	\$2.50 to \$4.00; with bath, \$4.50 to \$10.
Bingham	11th & Market Sts.	\$1.50.
Colonnade	15th & Chestnut Sts.	...	250-300	\$1.50; special rates; a few rooms at \$1.00.
Continental	9th & Chestnut Sts.	\$1.50 to \$5.00.
Dooner's—Men only	10th & Chestnut Sts.	\$1.00 to \$2.00.
Edouard	13th & Walnut Sts.	\$2.50 2 in a room; \$3.50 with bath.
Green's—Men only	8th & Chestnut Sts.	\$1.00 to \$1.50; \$1.50 to \$2.50 double with bath
Hanover	12th & Arch Sts.	Amer. & Eup.	...	\$1.00 to \$5.00, Amer. preferable to Eup.
Irving	917 Walnut St.	American	35-40	\$2.00 to \$3.00.
Keystone	1524 Market St.	European	200	\$0.50 to \$1.50.
Lorraine	Broad & Fairmount Ave.	Amer. & Eup.	...	Amer., \$3.00; Eup., \$1.50.
Majestic	1207 N. Broad St.	Amer. & Eup.	150-175	\$2.00.
Normandie	26th & Chestnut Sts.	American	150-200	\$3.00 to \$5.50, bath with all rooms. Roof garden.
Pascoe	313 S. 13th St.	European	150	\$1.00 to \$2.50.
Rittenhouse	2132 Chestnut St.	...	400	\$2.00 to \$2.50; most rooms double.
Stenton	Broad & Spruce Sts.	...	75	\$1.50
St. James	13th & Walnut Sts.	\$2.00.
Trainer's—Men only	Broad & Locust Sts.	...	35	\$1.00 to \$2.00.
Vendig—Men only	12th & Market Sts.	...	100	\$1.00 to \$2.50.
Walton	Broad & Locust Sts.	\$1.50; free committee rooms.
Windsor	1217 Filbert St.	Amer. & Eup.	...	Amer., \$2.00; Eup., \$1.00.

If further information is desired, write to the Chairman of the Committee.

JOSEPH HEACOCK, Chairman, Wyncote, Pa.
ROBERT KIFT, 1725 Chestnut St., Philadelphia.
GEORGE C. WATSON, Ninth and Market Sts., Philadelphia.
LEO NIESSEN, 1209 Arch St., Philadelphia.

TARRYTOWN HORTICULTURAL SOCIETY.

The monthly meeting of the above society was held on the 26th inst. Mr. Robt. Angus ably opened a discussion on the judging of vegetables, which

was afterwards well threshed out by the members—it being generally conceded that too much merit was placed on size at the expense of table value. A prize is offered at the August meeting for the best sixteen varieties of vege-

tables. The annual outing of the society takes place at Rye Beach, Aug. 6th, when it is expected the boys will all be feasted on fish.

D. McFARLANE.
Cor. Sec.

MARYLAND STATE HORTICULTURAL DAY, SEPT. 24, 1907.

The Maryland State Horticultural Society will hold its summer meeting at the Jamestown Exposition, September 24th. Arrangements have been made through the department of special events to have this date known as the Maryland Society's Day. Every effort will be made to have a full attendance of the association from all parts of the State. It is thought that the reduced rates from all parts of the State, together with the selection of date, which will be an ideal time to visit the Exposition, as well as the fact of the American Pomological Society, and the Society for Horticultural Science and Nut Growers' Association meeting at the Exposition during that week, will be inducements that the members of the Maryland Association cannot afford to miss.

Prof. T. B. Symons, secretary of the society, is now arranging an attractive program for the day, which he hopes to issue together with the premium list to be offered for the annual exhibit in Baltimore, December 3d and 4th.

CLUB AND SOCIETY NOTES.

At a meeting of the Greenwich Gardeners' Society, Greenwich, Conn., held on July 17, officers were elected as follows: Pres., Robert Williamson; vice-pres., P. Flaherty; rec. sec'y., Thomas Young; fin. sec., John Harper; treas., A. Mead.

At the next meeting of the Florist Club of Philadelphia, August 6, the competition for the Craig prizes for specimen plants of *Nephrolepis Amphibolia* will be a centre of interest. A paper is promised by Mr. George Reddes on "Some observations on native plants."

The Rhode Island Horticultural Society spent a pleasant day at the State Experiment station, Kingston, on July 23. A clambake, speaking by President Howard Edwards, Dr. H. H. Hartwell, Prof. Adams and Dr. L. J. Cole, demonstrations of fruit culture and other branches of the work, were among the enjoyable features.

The New Hampshire Horticultural Society was royally entertained by George B. Leighton at Monadnock Farms, Dublin, on July 18. It was the annual summer outing of the society. Secretary Hall called the meeting to order at the close of the dinner and after a welcome by Mr. Leighton, Wilfrid Wheeler of Concord, Mass., spoke on growing of small fruits; T. F. Boorst reviewed the forestry situation, stating that in Massachusetts there are 18,000 acres of young trees under cultivation; E. D. Sanders stated that the gypsy and brown tail moths seemed to be under control in the State, and L. J. Fosdick spoke on cranberry culture. The winter meeting will be held in October.

The new giant-white perennial pea, *Lathyrus latifolius* White Pearl is said to be a great advance on the old variety in size of flower, purity and profuseness of bloom, and is strongly recommended by The Garden as a first-class subject for cutting and for garden decoration.

NEW ROSE-Mrs. Jardine

Will be distributed in March, 1908

* Florists coming to Philadelphia in August are cordially invited to visit our Nurseries, and see the habit and growth of this sterling novelty.

* Mrs. Jardine was raised by Messrs. Alexander Dickson & Sons of Newtownards, and is in the same class for winter forcing as their previous introductions—Liberty and Killarney.

ROBERT SCOTT & SON, Sharon Hill, Del. Co., Pa.

OBITUARY.

Henry P. Weber, vice-president of the H. Weber & Sons Company and in charge of the farm operations of the company, at Oakland, Md., was found, on the morning of July 20, lying unconscious across his rifle in the chicken coop with a bullet wound back of his temple. He died four hours later without regaining consciousness. He had purchased a rifle some years previously for the purpose of shooting minks and skunks which were destroying many of his chickens. It is thought that he had heard a disturbance in his chicken coop and had taken his rifle with him with the thought of possibly shooting the disturber and from the surroundings and the location and direction of the wound it is thought that he had stumbled and the rifle being thrown from his hands was accidentally discharged. There was nothing in the attendant circumstances to indicate suicide. Mr. Weber was 39 years of age and is survived by a wife, five children, his mother, five brothers and five sisters. He was a devoted husband, a loving father, a kind neighbor and a man of the highest integrity. His death caused widespread sorrow in the neighborhood where he lived.

Christoph Meier, father of Carl Meier, died at his son's home, Green Bay, Wis., July 18. The effects of dropsy and old age caused the demise. Mr. Meier was 84 years old.

A speaker before the Springfield Botanical Society recently in discussing the insect pests of New England trees, declared that good pine lumber had doubled in price in six years, and that pine shingles, once in common use, are now so high priced as to be practically out of the market. The substitutes which have taken their place are also much higher than formerly. White-wood, used largely for interior finish, is one-third higher than five years ago, while spruce lumber has doubled in price in ten years, a set of facts which show that the time has arrived for conserving our stores of wood, through forest reservations, better protection against fire, and more systematic methods of fighting insect pests. But for the coming of concrete and other non-combustible building materials which lessen to some extent the demands on our forests, the outlook for a supply of housebuilding materials at reasonable prices would be most disquieting.

A GERANIUM PEST.

All the geraniums planted out in the parks at Sandusky, O., and with some of the florists are being slowly eaten up by cutworms. I have not seen a perfect leaf of flower on the many thousands of plants used. It does not sound true, but it is a fact.

SCHILLER.

HARDY PERENNIALS

Yucca filamentosa. *Aconitum Napellus* and bicolor. *Helenium superbium* and *striatum*. *Rudbeckia*. *Heimerocallis*. German Iris, many colors. Hardy Phlox, 20 varieties. *Punkia subcordata*. Write for prices to

Seed Trade

Crop prospects have greatly improved during the past two weeks particularly corn, and it looks as if the earliest varieties might mature for seed. As to late sorts such as Stowell's Evergreen, Late Mammoth, Old Colony, Country Gentleman, Hickox, and Egyptian, their chances of making any seed this year are very doubtful, still, if frost holds off well into October it will not be a hopeless case, but corn is certainly very late, at least a month, and it will be remarkable if it makes up lost time.

Pea growers are having their troubles, and it can be stated as a fact that the general crop will be short, fully as short as last season's. In fact it is said that deliveries will not average better than fifty per cent. Should this prove correct, there will be much complaining, especially from canners, who most persistently refuse to recognize the necessity for any shortage in seed crops. More will be said along this line in an early issue of Horticulture.

Notwithstanding the lateness of the sugar corn crop in general, green corn has been on the market for some time, much of it coming from the south, and mainly of the Adams varieties, but genuine sugar corn locally grown has been in evidence for about ten days and has brought as high as \$2.25 per 100 ears. It ought soon to be abundant and much lower in price.

Green peas have brought most excellent prices, large shipments from 90c. to \$1.15 per bushel.

Beans have also been selling at very good prices, but there is some prospect of the market being glutted with a consequent drop in prices. As a matter of fact most all green garden "sass" has sold at exceptionally good prices, and if crops have been somewhat disappointing in yield and a little later than usual truck farmers will no doubt make quite as much if not more money than they generally do from the same acreage and larger crops.

These are happy auguries for the seedsmen, as they mean a good active demand for seeds next winter and spring.

Vice-Consul Ernest Vollmer writing from Tsingtau says that a large American seed business could be worked up in this district. Owing to the system of fertilization, Chinese vegetables are very unhealthy and are not eaten by foreigners. The result is that every family has a vegetable garden. Small packages of seeds, the same size as in America, sell for 10 cents Mexican (5 cents gold). All of these goods come from Europe; but if the Americans would introduce their seeds, allowing the unsold packages to be returned at the end of the season, as is the practice in America, there is no reason why the trade could not be diverted. Natives would probably buy what seeds were left over at a reduced price, and thus do away with the expense of re-shipping to the United States. This business could be worked up all over the Orient, as the conditions are similar, and would seem to be worth seeking.

The special car from Boston on Saturday, July 20, carried a happy company of fifty to the sweet pea trial grounds of W. W. Rawson & Co., at Marblehead, Mass., and trains, automobiles, carriages, etc., swelled the number to over a hundred during the afternoon. Much interest was manifested in the ninety-six varieties displayed, which included fifty distinct novelties. A voting slip was given to each guest on arrival on which they were requested to register the 12 best varieties in their opinion. The result showed the favorites to be Apple Blossom, Frank Dolby, Florence Norton, George Hertel, Helen Pierce, Miss Wilmott, Mrs. Alfred Watkins, Nora Unwin, Queen Alexandra, Shasta, White Wonder, Zoe. Base ball was indulged in by some of the visitors, refreshments were served, and at six o'clock the special car for Boston started on its trip.

E. C. Dungan, manager of the Wm. Henry Maule establishment, leaves Aug. 3rd for a trip along the Canadian border via Cape Vincent. He will be accompanied by Mr. King of Mandeville & King, Rochester. We understand this is to be a fishing and pleasure trip but it will be well not to overlook its steady influence on the pea and bean market. These two hardheads are not easily stamped by the cry of "wolf, wolf," or fire alarms.

It is reported that the crop of Kentucky Blue Grass will be controlled this year, as it was last year, by a syndicate composed of a few Blue Grass cleaners.

As reported in these columns some weeks ago, C. B. Coe has returned to the employ of D. M. Ferry & Co., and is now on the road again.

A GOOD MOWER.

The clipper lawn mower, manufactured by the Clipper Lawn Mower Company, Dixon, Ill., continues to win its way to permanent popularity, judging from approving reports of parties who have purchased this type of mower on the strength of the advertisement in Horticulture and the strong recommendation given by Mr. Orpet in a communication in Horticulture last season as to the efficacy of the clipper in exterminating "crab grass" when used persistently. The hand machines and horse machines have both given good results.

Our note two weeks ago concerning the magnitude of the strawberry crops in New England is confirmed by later reports from many localities the crop being in some cases nearly double that of last year. The retarded spring possibly had something to do with this gratifying result. As a rule the growers express satisfaction with the returns. Occasionally there is a complaint from those who had been anticipating big prices because the season was late. Many Portuguese and Italian farmers are going into strawberry raising.

MASSACHUSETTS AGRICULTURAL COLLEGE.

Summer School of Agriculture.

There will be a summer school at Massachusetts Agricultural College in 1908. This will follow somewhat the same lines as the school which has proved so popular and successful this year. This announcement came officially from the Dean, Professor F. A. Waugh on Thursday. It was stated further that although the courses would be somewhat changed in 1908 the main idea of this year's school would be adhered to and improved as far as possible. Probably one or two strictly technical courses in certain lines of horticulture will be offered and if possible there will be additional professional courses for teachers. The expenses of the course in 1908 will be considerably greater than they have been this year, but will not exceed a total of \$5-\$6 a week. It is expected furthermore that some definite limitations will be put on the number of courses which students may elect and also upon the number of students admitted to each class. If this year's experience is an indication of what may be expected next year it will be necessary also to put some limitation upon the total number admitted to the school.

PREPARE FOR CHRISTMAS

Novelties always sell during the holidays. If you have not already grown them, try some Pink or Rose SPECIOSUMS. If potted in July will flower for Thanksgiving and Christmas. Always useful either for cut flowers or plants. Ask the leading florists in Pittsburgh, Cleveland, Detroit, Buffalo, or around New York City. Order today. Will ship any time. Cold storage Lilium longiflorums take about two months to bloom from time of potting; speciosums from five to six months, so that longiflorums wanted for Thanksgiving and Christmas should be planted about Oct. 1, and speciosums in July.

During Recess

*"Hang, crowd, and all such, at
And there is the money."*

ST. LOUIS FLORISTS' CLUB FOUR-TEENTH ANNUAL OUTING.

One of the largest gatherings of florists and their families and friends at any one time was on last Thursday, July 25, in Romona Park, on the occasion of the yearly picnic given by the St. Louis Florists' Club. No actual count was taken, but the trustees estimated that the crowd numbered nearly four hundred. The hardest workers to make it pleasant for all were W. E. Smith, Carl Beyer, Frank Fillmore and Charles Schoeule.

All the wholesale houses closed up at 12 o'clock and the bosses and employees came out in full force. The day was very hot and shady places were at a premium. During the morning hours the crowd amused themselves on the lake boating and fishing, others took to dancing. Our suburban members came out to a man. Kirkwood, Belleville and Edwardsville were well represented. Messrs. Fillmore, Schoeule and Beneke acted as a reception committee at the gate, while the trustees took charge of the crowd at the grounds. One of the features was the fine band of music.

Trustee Smith started the games of which there were fourteen. The 100 yard dash for all was won by August Hartman; prize, a silk umbrella. The fat-man's race was called off as there were no florists present whose weight was over 200 lbs.

Other events were as follows:

50-yard race, girls under 16, prize a fan; winner Alice Music. 100-yard race, boys under 16, prize ball and bat; winner John Bentzen. Potato race, prize box of candy; winners Joe Kerr and Alice Music. 50-yard egg and spoon race, prize silver meat fork; Mrs. W. J. Pilcher. Hop, skip and jump, gold scarf pin; Fred Albers, 32 ft. 2 in. 50-yard race, boys under 12, catcher's glove; Edwin Lammers. Ball throwing for ladies, gold thimble, Miss Mamie Tockenbrock. Flower-pot-breaking contest, silver salt and pepper set; Mrs. Theo. Klockenkemper. Base ball game between employees of wholesale houses and employees of C. Young & Sons, five innings; score 11 to 5 in favor of wholesalers. The same teams will play a full nine inning game at a later date. The wholesalers contemplate challenging the Chicago wholesale team. Tug-of-war between St. Louis and Kirkwood was won by Kirkwood amid great excitement, and the box of cigars offered as a prize was duly gathered in.

A bountiful supper was served and the evening was devoted to dancing and singing.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

Annual Picnic.

The results of games unfinished at our time for going to press last week were as follows:

Tug of war between the commercial and private gardeners, won by the private men under leadership of James Wheeler. Ladies' potato race, won by Catherine Lally and Jean Westwood. Throwing base ball: Carroll Davis, 266 ft., 11 in.; A. E. Walsh, 258 ft., 3 in. One hundred yards handicap, Carroll Davis, J. S. Brown, A. E. Walsh. Ladies' tennis ball throw: Harriet Coles, Louise Eisenhart, Florence Palmer. Throwing 16 lb. shot: W. J. Crassie, 30 ft., 1 in.; John Reed, 29 ft., 5 in. Long jump: G. H. Grey, 16 ft., 5 in.; W. J. Collins, 16 ft., 2 in. Half mile race: J. S. Brown; John Reed. Three-legged race: W. J. Collins and John Reed; J. S. Brown and Fred Coles. Boys' sack race: Theo. Westwood; John Sisson. Men's sack race: W. J. Collins; W. S. Grassie. High jump: W. S. Grassie, 5 ft., 1 in.; Frank Edgar. Fat men's race: James Wheeler; Aug. Zirngiebel; J. L. Miller. 240-yard handicap: G. H. Grey; E. G. Walsh; J. S. Brown. Potato race, girls under 15: Helen Vears; Lillian Vears. Potato race, boys: Robert Smith, Chas. Clarke; W. McGorum. Quoits: W. Robb; John McKenzie; F. Coles. Boys' base ball: Thos. Iliffe team beat Andrew's team.

GAMES OF THE GARDENERS' AND FLORISTS' CLUB OF BOSTON.

News Notes

A new retail store has been opened in Detroit, Mich. by Frank De Beul.

Joseph Krug has opened a retail flower department in the lobby of the Commercial building, Alton, Ill.

The Dillon greenhouses at Locksburg, Pa., are reported to have been seriously damaged by the recent cyclone, and hundreds of fruit trees were destroyed.

Mr. Monahan who has been doing business in Blackinton, Mass., under the name of the Berkshire Horticultural Company, has been missing since the first of July.

Krueger Bros., Inc., Toledo, O., have recently purchased an 80-acre farm in Wood County, and will begin improvements thereon that will meet the demands of their rapidly increasing business.

The exports from Rotterdam to the United States during the year 1906, as reported by Consul-General Listoe include bulbs and flowers to the amount of \$475,209, plants \$305,976, and seeds \$151,907.

Etta Kelley and Irene S. Scott, composing the Scott Floral Company, caused the arrest of Samuel A. DeBolt, a former employee, several weeks ago, and had him arraigned before a justice of the peace charged with stealing \$11.50, which he had collected from patrons of the floral company. DeBolt was found not guilty, and today he began suit in the district court against the floral company for \$20,000, to which extent he claims his good name and reputation have, and will, be injured by his unjust arrest. He alleges that his arrest was the result of a conspiracy.—Denver Post.

A new lupine has been introduced in England under the name of Opal. It is described as bearing flowers of a charming shade of white and mauve, the plants being of enormous size.

AT PHILADELPHIA

We shall make the most remarkable Exhibition of Sterling Novelties in Florists' Supplies ever seen on this continent.

It will be one of the big sensations of the S. A. F. Convention.

These goods have all been personally selected by Mr. H. Bayersdorfer who has spent many weeks in the largest and most progressive **European Sources of Supply**. A life time devoted to this work has equipped Mr. Bayersdorfer with a discernment of the distinct needs of the American market possessed by no other buyer. Send for Catalogue.

FLOWER MARKET REPORTS

BOSTON Quiet still prevails in the flower trade but it is expected that in a few days more the summer resort demand will open up and help conditions materially. Roses are poor with the exception of Kaiserin and Carnot and a few Beauties. All these sell fairly well during the period of recuperation of the standard winter varieties. So far, lily of the valley is selling below the expected demand and price. Asters improve daily and bring a good price in the absence of carnations but a few days more will bring in a heavy supply and values will fall far below the fancy prices possible at the present moment. Lilies, peas, etc., are in plentiful supply.

The supply is shortened
BUFFALO all along the line and business improved slightly. Carnations are small, roses not plentiful and with lilies and peas have sold well. Beauties are not at the best, although they have sold out fairly well. Asters have made their appearance but with short stems as yet. Business is as good as can be expected for this time of year.

The weather continues warm, stock poor. There is little demand for cut stuff except some funeral work which comes in spurts. Some fairly good Beauties are still to be had. Sweet pea season is about over. Asters are rapidly coming in to take the place of carnations. The excellent growing weather has brought the crop on earlier, the quality of which is good. Tea roses are at a low ebb, practically nothing being cut in this vicinity. Good gladioli are arriving and sell about as well as anything. The various kinds of lilies are to be had in abundance. The green market is in good condition as everything one wants can be had in any quantity.

NEW YORK

Present flower demands are easily satisfied. A fairly good supply of Beauties is coming into the market and these with a liberal quantity of Killarneys, Victorias and Testouts seem all sufficient for the business doing. Richmonds, Brides and Bridesmaids are most of them from young stock and insignificant in size and value. A few good carnations are to be had and also quite a number of inferior grade. Lilies are in good supply.

PHILADELPHIA

Trade conditions here indicate a slight increase in activity. The first flush of outdoor flowers having passed throws a certain amount of inquiry towards commercial centers. The decrease in receipts consequent on re-planting has also helped to steady the market and give it a little tone. The volume of business has not risen above normal summer level but it is handled at a profit which is all that can be expected at this season, and better than usually comes our way. There is no such thing as crop news at present the period between the old and new being almost at low tide. Asters and gladioli are fine and buyers appreciate them.

TWIN CITIES

Trade is very quiet. Roses and carnations and a few summer lilies are about all the florist has to offer. There are, of course, a great many sweet peas, but the demand for them is small. Roses from the new plants have not put in an appearance as yet, but in a few weeks we will, no doubt, have a variety. A new store is to be opened in St. Paul this coming month by parties who are very strong financially, and which may cut into the trade to some extent.

Reports from Detroit are that supply is low and none too good. Asters are beginning to come in and so are gladioli. Many asters have fallen vic-

tims to the wireworm. Cleaning up of stores is quite general.

PHILADELPHIA NOTES.

Mrs. Samuel S. Pennock and family accompanied by a number of relatives and friends sailed on the "Haverford" last week for Europe. Samuel S. Pennock will sail to join them in Wales immediately after the convention. Hay fever time is a little late this year.

They tell us it is a much greater crime to put the dash in h—ll than to say it outright. That seems to be the idea of some of our bright business men of Philadelphia judging by this card over their desks:

Early to bed and early to rise,
Work like hell and advertise!

That's the kind of sentiment that would have pleased our old friend of happy memory, Benjamin Franklin. And the business Quakers of today, while they may be sane and circumspect, will be found in the fore front with their sleeves rolled up and enthusiastic in

"Pushing things to the end."

Rupert Kienle sails on the "Faderland," August 3rd, to be gone about eight weeks. He expects to meet in his travels his neighbor Edward Reiger who sailed some two weeks ago.

Fred Michell, Jr., has just returned from his annual summer sojourn on the Jersey coast.

Robert F. Tesson of St. Louis visited us on the 31st ult. the occasion being his brother's marriage to a Philadelphia lady at which he had to officiate as best man. We understand Mr. Tesson has recently sold one half of his 100 acres at Clayton, Mo., for a quarter of a million and has invested largely in Texas real estate.

INCORPORATED.

Krueger Bros., Toledo, O., capital stock, \$50,000; incorporators, Henry, Otto, William, Agnes and Julia Krueger.

NEWS NOTES.

Hitchings & Co. have moved into their new factory at East Elizabeth, N. J., and have commenced operations in the foundry department. The construction shop remains at West Side avenue, Jersey City, for the present.

The range of new houses soon to be commenced at Bronx Botanical Garden, New York, is planned eventually to be the largest range in the world. Power house and a portion of the heating apparatus have already been installed. The first group will consist of five houses. Bids on construction of same will be opened August 1.

An oval bed of ornamental foliaged plants, 16x30 feet in extent, in front of the City Hall in Detroit, is one of the prime attractions of the neighborhood. A noble specimen of Phoenix Leonensis, 12 feet in height, forms the centre. Pandanus Veitchii, acalyphas and crotons in formal arrangement are the other components, echeveria Mirabilis being used as a border. The effect is very good.

J. W. Rodgers, superintendent of the parks of Cincinnati, has incorporated in his recommendations to the Board of Public Service a proposal that the present city greenhouses be increased to about double their present extent and that a city nursery of fifty acres be established on high ground for the raising of trees and shrubs for the park department. Mr. Rodgers has recently returned from an extended tour of inspection of the public parks and playgrounds of other cities.

New England agriculturists are giving increased attention to the raising of alfalfa, as a forage plant. The Agricultural Experiment Station in Durham, N. H., has just issued a bulletin on the subject, which says: "Up until the present time we have advised against the expenditure of very much time, labor or money by the farmers in trying to grow the plant, because in our experiments we could not secure what would be called a reasonably good stand. After repeated trials, however, in which various methods have been used, we have met with a degree of success which seems to warrant a recommendation for alfalfa to the farmers of the state."

Over 100 florists from Omaha, Council Bluffs and South Omaha held their annual picnic at Lake Manawa Thursday last. Owing to the recent rains and dampness of the lawns the usual contests were not held, but there was a bowling competition, in which J. Hess of Omaha won first prize, a beautiful silver mounted umbrella; J. F. Wilcox of Council Bluffs second, and B. Floth of Omaha third, the last two receiving each a box of cigars.

Supper was served at 6 o'clock, after which the entire party went across the lake for a plunge at Manhattan beach, after patronizing the roller coaster and other park attractions.—Omaha Bee.

The Detroit Florist Club will give an outing to Bois Blanc on August 8th, '07, with a good athletic programme as a special attraction.

MARYLAND'S VARIETY OF FRUITS.

One visiting the Maryland horticultural exhibit in the States Exhibit Palace at the Jamestown Exposition this week found nine different kinds of fruits exhibited. They are Red Astrachan and Early Harvest apples, and Greensboro peaches from the Maryland Experiment Station at College Park; Yellow Transparent apples, Lawson pears, huckleberries, Red Miller raspberries, Japanese wineberries, and Greensboro peaches from J. Spencer; Marianna plums from Miss Salome Carey, Holloway gooseberries from R. H. Phelps, and Lucretia dewberries from J. A. Davis. Over twenty extension tables are covered with these luscious fruits.

The object of the exhibit is to show the visitors to the exposition the horticultural possibilities of the State, and surely this variety and the excellence of the fruit shown impresses one with the ability of the State to live up to the claims of the ardent admirers of this industry.

The trucking industry is also well represented this week by a large exhibit of cucumbers from W. F. Allen, and large new Irish Cobbler potatoes from F. E. Matthews, and new table corn in the ear from Miss Salome Carey.

Special Philadelphia Convention Number Will Be Issued August 17.

It will reach the best trade at the convention and all through the country.

Is Your Name In The Above List? If Not, Why Not?

?

PICNIC OF THE FLORISTS' CLUB OF WASHINGTON.

On July 25th, for the first time in the history of the city, all the florists closed their stores at noon, in order that all the employees, as well as the managers, could attend the annual outing of the Florist's Club of Washington. This year the Great Falls of the Potomac was the objective point of the picknickers, and thither, at 2 P. M. cars carrying about 200 men, women and children, and gaily decorated with bunting and flowers, wended their way.

During the trip, cigars and peanuts were handed to the passengers, and on arriving at the Falls, Queen Beatrice and Liberty roses were freely distributed among the ladies. Attached to one of the cars, was a freight car, carrying things suggestive of coolness, viz: Ice cream, ginger ale and root beer.

Among the principal features of the day were the athletic contests, which were in the following order:

Potato race, open to all, 75 yds.; prize, belt. Winner, Frank Fleury.

Potato race, for girls, 50 yds.; prize, beads. Winner, Marie Bisset.

100 yd. dash, for men; prize, 1 doz. handkerchiefs. Winner, Robt. Featherstone.

50 yd. dash, for ladies; prize, parasol. Winner, Eva B. Cooke.

100 yd. dash, for boys, 18 and under; prize, baseball. Winner, David Buriar.

Three-legged race: prize, suspenders and necktie. Winners, J. Sharper and B. Johnson.

Sack race: Prize, pen knife. Winner, Oliver Beveridge.

While the athletic events were of great interest to all, especially to the winners, the most interesting feature of the entire afternoon was the fine old Maryland dinner, which was served at the Dickey homestead. Everything was in abundance and of the best, and as "the proof of the pudding is in the eating," judging by the rapidity with which things disappeared, the proof was indisputable.

OUTING OF THE FLORISTS' CLUB OF WASHINGTON, AT THE GREAT FALLS OF THE POTOMAC.

The Dickey Homestead in the Background.

Grateful thanks are due to the able committee—Geo. Shaffer, chairman; Sec. McCauley and F. H. Kramer, for the manner in which everything was handled. The day will go down in history as a red-letter day to the florists. May history repeat itself each year!

WASHINGTON PERSONALS.

Business has been rather quiet for the past week, very little doing. Several florists are taking advantage of the dull season for their summer outings, viz: Z. W. Blackistone, who with his family is sojourning at Boyd's, Md.; L. Hoover, of the firm of Mayberry & Hoover, is enjoying the salt breezes at St. George's Island; Mrs. Robertson, wife of John Robertson, florist, of 1108 Conn. Ave., has gone to Scotland to visit relatives and friends.

TOLEDO (O.) PERSONALS.

It has finally leaked out that Frank J. Schoen of the Schoen Floral Co. has taken unto himself a wife, who was Miss Grace Howes of Maumee, O., until April 9th. The ceremony took place at the church of Immaculate Conception, Toledo.

H. A. Mills, who is getting well along in years, intends to sell his business, which is located on Starr Ave. He has been quite successful and deserves, with his faithful wife, who has been his steady helpmate, an easy time for the rest of his life.

What the inmates of an Insane Asylum can do in the way of landscape flower gardening under the directions of superintendents, is revealed by a visit to the State Hospital. The grounds are in perfect condition and bear testimony of the skill of the two superintendents, Mrs. Davis, for the landscape and Mr. Halbach, for the flower department. Beautiful specimens of trees and shrubs may be seen here and it would be hard to duplicate them. The principal plants used in flowering groups are cannas, geraniums, coleus, salvias and as the beds are large they are very effective.

PERSONAL.

F. W. Timme, of Chicago, has sailed on a two months' visit to Europe.

Robert Simpson, wife and children, Clifton, N. J., sailed for England on July 30.

J. A. Peterson and wife of Cincinnati, after visiting Washington and Philadelphia, sailed from New York on August 1, on the Scandinavian steamer Oscar 2d, for Christiana and Copenhagen.

The names of J. J. Hooper, president of the horticultural society, and W. A. Willey, have been mentioned as successor to the late William Stone, superintendent of Pine Grove Cemetery, Lynn, Mass.

George K. Kester, a florist, of 6150 Lombard St., formerly of Silverdale, Bucks county, Pa., disappeared from home Thursday, three weeks ago, and left his wife and children and mother penniless. They are in great distress. He was last heard from in Pittsburg.—Philadelphia Inquirer.

"WHERE'S THAT CHICKEN?"

H AND CO

OUTLIVED USEFULNESS

You are quite right, it is not so many years since we used to talk wooden eave plates, and sold lots of houses with them—but we had our troubles because those wooden plates gave our customers “rot out” and ice troubles. We did a good bit of tall thinking, and now you will find our houses are built with steel eaves and cast iron roof bar brackets. This makes an eave which binds and stiffens the house at a point that is the weakest in the all cypress house. There is a long headedness in knowing when a thing has outlived its usefulness, and having the sense to discard it.

The wooden plate is a back number; write to H & Co. for further information.

A. H. HEWES & CO. INC.

CAMBRIDGE, MASS.

FLORIST WARE OF EVERY KIND

THIS IS THE THOROUGH WAY

We pack for shipment our frames and sash. Every precaution taken to prevent breakage of glass. We don't know of a sash that is made as honestly, as strongly. They have all the strong points of perfect joints, steel dowl pins and the round iron brace and tie rod. The frames are made of Cypress, same selected quality as the sash. Any one can erect them, it is only a matter of bolting up the angle iron at the corners, and dropping the rafter rail in place. Those angle irons are not only a matter of convenience, but make a perfectly rigid joint—a frame that will outlast any two ordinary ones and our gardener friends have proven it.

LORD & BURNHAM CO.

Greenhouse Designers and Manufacturers.

New York Office: 1133 Broadway, Corner of 26th St.

BRANCHES | Boston—819 Tremont Building.
Philadelphia—1211 Filbert Street.

Two more things you ought to know about the sash: They weigh 40 lbs. each, which makes them especially light to handle. We make a freight allowance on orders of ten or more.

We make every part for a greenhouse but the glass. We sell any part.

THE usual iron frame house looks full as well when benched up and stock well grown, but it's with an almost empty U-Bar house like this one, that you get the real value of the wonderful lightness and grace of U-Bar construction. That gutter free curved eave makes an unobstructed space from ridge to sill, for the 24 inch glass. The partitions are so light that without the doors they would scarcely be noticeable.

This particular house is left open in the center for the taller plants in pots.

It's a splendid, clean cut inviting sort of a house, as thoroughly practical as it is attractive.

Ornamental Conifers

Ginkgo biloba—female

G. biloba—male

Torreya nucifera

Taxus baccata arg. var.

TAXACEAE

These are the nut-bearing conifers. They are divided into two tribes—Salisburineæ and Taxineæ.

Salisburia adiantifolia or Ginkgo biloba has been already described in this paper in the July 6 number and it is useless to say more about it; it is certainly a beautiful tree, more appreciated here than it is in Europe, for it is the best to plant as a city tree, always clean and free from disease and insects. One thing I would add to M. Thomas' note: The tree is dioecious—that is to say, there are male and female trees, which are easy to distinguish one from the other when of a certain size. The male grows bushier than the female, which has long, slender branches and when these are covered with their yellow plum-like fruits, it adds much to the interest of the tree. I have to acknowledge, however, that when they begin to drop their fruit it becomes a real nuisance, especially on the walks.

Cephalotaxus, which are dioecious and have plum shaped fruit, also, are only hardy in good sheltered situations. C. Fortunei from China is the best, with long, flat, soft glassy needles. C. drupacea from Japan, where it is found as an undergrowth, is a lower growing bush with shorter needles. C. pedunculata, from Japan, is most familiar in the variety fastigiata, which looks like an Irish yew with much longer and larger needles. It freezes back very often and wants to be well-watered.

Torreya taxifolia, from Florida and myristica or California—the California nutmeg—are not hardy in New England. T. nucifera, from Japan, is quite hardy in shady, sheltered situations. In appearance it resembles much cephalotaxus but has stronger, more bushy growth, and has very sharp-pointed and stiff needles. It burns on the sunny side in winter when exposed, but grows out again. This tree is very little known and is seldom seen in cultivation. It is dioecious like Ginkgo. We have only male plants, and do not know if there is a difference in the appearance of the two. In some seedlings which we have some have much shorter needles than others and a more Araucaria-like growth. The plants are only four years old, and I can not say definitely about them.

Taxus are very ornamental bushes where they can be grown and when they are covered with their red berry-like fruits they look very attractive. T. canadensis is our American yew, a low bush well-known, very useful—but not much used—to plant under the

trees in the woods as ground cover. It grows as well in the open but does not like the sun. T. Washingtonii and repanda are probably forms of canadensis. The first has a yellowish color which turns brown in winter while repanda is very dark green and of spreading habit.

T. baccata is the English yew. Every Englishman is proud of the beautiful old yews which are found in his country and all the topiary work done with young ones. Here we cannot say the same for it is only in shady well-sheltered places that they will succeed. There are quite a few varieties which can be grown wherever the common one will stand. T. adpressa and ad. stricta have very short roundish needles, very distinct from the others. They are sometimes known under the name of tardiva, but we have from Japan one tardiva which is very different. It is a low spreading bush with longer needles, of a glossy dark-green color variegated with bright yellow. Aurea, aurea pendula and elegantissima are three good yellow-variegated forms. Dovastonii and its variegated form are of spreading habit with long, somewhat pendulous branches with larger needles. Fastigiata or Hybernica and their variegated forms are beautiful erect-growing trees, but they are the tenderest of the lot. Erecta and cr. variegata are hardier; their growth is more fan-shaped, with smaller needles. There are many other forms like Cheshuntensis, epacrioides, gracilis pendula, etc., but the best for New England is albo-variegata, raised in Germany. It is a good, bushy, straight-grower, quite hardy and, when growing, is of a beautiful cream color, which stands nearly the whole year.

T. cuspidata and cusp. brevifolia are the best for our region. They come from the northern part of Japan. The growth is different from that of the English yew; not so bushy, the branches long, well furnished with short shoots, the needles thicker and of a lighter green color. T. brevifolia from California and floridiana are not hardy.

Phyllocladus Vacyrdium, Padocarpus, Prumnopitys and Taxgothæa, which belong to the same tribe, are not hardy and can only be grown in tubs like araucarias, bay trees, and the like. Prumnopitys, which comes from Japan, is the hardiest and could be tried in exceptionally sheltered situations.

British Horticulture.

THE SWEET PEA SHOW

The sweet pea cult is still booming on this side, judging by the success attending the annual show of the National Society. The entries numbered 797, arranged in 88 classes, whilst the bunches of flowers totalled 3,217—1,200 more than at the exhibition last year. The season has proved unfavorable for the northern growers, and in consequence the chief awards went south. Among the winning novelties was a very fine introduction named *St. George* which will be sent out by Messrs. Hurst and Son. The standard is bright orange red, whilst the prevailing color of the wings is bright rose. It received an award of merit at the Royal Horticultural Society's show at Holland House, Kensington. *Elsie Herbert* is a picotee flower of the Countess Spencer type. The margins of the petals are tinged with rose, which fades in the centre of the flower to almost pure white. *Silas Cole*, who raised the Countess of Spencer and other popular varieties, received an award for a new variety bearing his own name. The blooms are of a bluish-violet in the centre, shading to a deep maroon in the outer parts of the petals. The other awards were granted to the following: *Nancy Perkins*, pale orange-scarlet, shaded with terra-cotta; *The Marquis*, lavender; *Rosie Adams*, centre parts of a heliotrope tint, merging to rose in a large standard, and *Evelyn Hemus*, creamy-white with rose-colored margins.

THE SWEET PEA TRIALS

A further series of sweet pea trials has this year been conducted at the University College gardens, Reading, under the direction of Chas. Foster, the horticultural superintendent. After the show a party of members of the National Sweet Pea Society journeyed to Reading and inspected the trials. The floral committee made an exhaustive inspection of the seedlings, and as a result five of the varieties which received awards at the show were confirmed. A first-class certificate was granted the American introduction, *Helen Pierce*, the popular marbled blue, which is scheduled as the best variety in this section in the Society's audit class. It was noticed that many of the strains were considerably mixed, and it was a difficult matter to find the real variety. There is certainly a need for greater care in sending out new varieties. Endless confusion has been caused by the unnecessary hurry of raisers in placing novelties on the market before they are properly fixed. At the recent show in two cases flowers which were apparently *Lord Rosebery* were shown as *John Ingman* and these were disqualified, to the chagrin of the exhibitors. I heard of an instance this week where a grower has *John Ingman* and several other kinds coming out of the seed purchased as *Henry Eckford*. It is also reported that a variety known as *Coral Gem* is a hooded form of *Countess of Latham*. There is evidently plenty of scope for the National Society in keeping an up-to-date list of synonyms, a guide to growers.

A NEW DEVELOPMENT

The Royal Horticultural Society has further extended its usefulness by the establishment of a laboratory and research station in the gardens at Wisley. The society is establishing a school of horticulture for training young gardeners, and it will now be able to train students in the scientific branches as well as in the routine of cultivation. The Surrey County Council has arranged with the society to send a number of boys from the county schools for instruction. As explained by Lord Avebury, who performed the formal opening recently, the society has two objects in view in extending its work, viz., the improvement of horticulture by giving the best possible training to a certain number of young gardeners, and the promotion of horticultural and botanical science by experiment and investigation. Lord Avebury added "Among the subjects it is hoped to experiment upon in the near future are soil-sterilization by steam as a means of destroying pests of plants which live in the soil; an investigation into the influence of sterilization on the plants cultivated in the soil; study of the bacterial flora of the soil; etherization of plants; investigation of certain plant diseases. Each of these subjects will entail a large amount of laboratory work, as well as experiments in the garden." The work which will be undertaken at the laboratory is of such national importance that the society should not be called upon to rely for voluntary effort for the necessary funds. It is a case where state aid can be legitimately claimed. The British Government has never been very liberal in aiding the valuable work of societies of this character, for we are not as fortunate in this respect as America and the Colonies.

MESSRS. SUTTON'S TRIALS

Messrs. Sutton and Sons for some time have been conducting a valuable series of potato trials on their extensive experimental grounds. At the Temple show an interesting feature was their display of wild species of tuberous solanums and hybrid seedlings raised from them. Amongst the former were the wild potato of Uruguay, *Solanum Commersonii*, *S. Maglia*, *S. verrucosum* and others. Respecting these, Messrs. Sutton state: "It is especially noteworthy, in view of the fact that so many scientists are now engaged in the search for the original wild type of *Solanum tuberosum*, which gave rise to the cultivated potatoes, i. e., the potatoes of commerce, that in no case do any of the seedlings raised from the wild types grown by Messrs. Sutton and Sons show any variation whatever from the parent types, whereas on the other hand seedlings raised from the cultivated potato never come true, and seldom, if ever, show any marked resemblance to the parent." A party of experts who visited Reading lately were greatly impressed with the value of the experiments. There have been some trials of plants raised from seeds and tubers received from W. Stuart, of the Vermont Agricultural Station.

W. H. Adsett.

LIBRARY NOTES.

I find my last contribution under the above heading appeared in HORTICULTURE as far back as January 19. In the interim there has been no cessation of the efforts on the part of the publishers to add to the already lengthy list of gardening publications and there is a considerable pile of new volumes lying on my library table awaiting notice.

A short notice of some of the more important and interesting ones is all that is within the bounds of possibility and may interest some of the readers of HORTICULTURE who in their gardening have also literary tastes. We will begin with a handy little volume entitled *Every Man's F. Rowles*. (Hodder and Stoughton, London). This is a companion volume, similar in style and size, to one previously noticed, viz.: *Everyman's Book of Garden Flowers*. It is essentially an amateur's guide and is illustrated with about 200 small line engravings, and dealing with propagation, protection for plants, manuring, tillage, weeds, tools, and pruning and concluding with a garden glossary.

Les Iris dans les Jardins, by H. Correvon and H. Masse (Librairie Horticole, Paris and Jardins Correvon, Geneva). Books on the Iris are few in number, the most recent one in English being that by Mr. R. Irwin Lynch entitled *The Book of the Iris* which is a comprehensive monograph likely to meet the requirements of most English speaking cultivators. The one under notice, however, is French and the name of M. Correvon is a sufficient guarantee of its excellence. His experience in matters of the Iris, to say nothing of his knowledge of Alpine plants, is a most extensive one for he has personally visited every collection of repute in Europe and is acquainted with all the leading growers on this side.

This little handbook deals with the history of the flower, with its geographical distribution, with its culture and propagation. The references throughout the book show a wide area of research and references to innumerable authorities who have written on matters relating to the Iris, a task for which M. Correvon is peculiarly adapted considering his linguistic ability. The cultural directions are from the pen of M. Masse who is a capable exponent of the art of Iris culture, and to anyone able to follow the writer in the language in which the book is written it will doubtless prove to be a useful and interesting *vade mecum* on a flower of no mean importance in our present day flower gardens.

Report of the Third International Conference, 1906, on Genetics. Edited by the Rev. W. Wilks (Royal Horticultural Society, London). This is a bulky volume of nearly 500 pages containing a report of the proceedings of the conference, the papers read, and reports of the festive gatherings at which the invited guests were entertained. Being of a specially technical character the report does not form part of the R. H. S. Journal in an ordinary way but is issued as an independent publication.

In the text are inserted at intervals some very excellent process engravings

many of them portraits of prominent members of the society and of the gentlemen who attended the conference. The frontispiece is that of Gregor Johann Mendel, of whom the editor gives a short biographical sketch and account of his work in plant hybridization. Those persons interested in Genetics will find in this volume a mine of information that for all practical purposes may be considered as being up-to-date.

First Steps in Gardening, by Walter P. Wright and Edward J. Castle, (Cassell & Co., London and New York). There are 150 pages written in clear, succinct and sometimes trenchant terms. There is no waste of words and most of the directions given are severely practical. Hence these books have appealed to a wide circle of amateur gardeners in this country.

Old Fashioned Flowers, by Maurice Maeterlinck, (George Allen, London). A tastefully gotten up book translated from the German with some pretty colored illustrations by G. S. Elgood who has already done some excellent work in this way for other horticultural writers as previously mentioned in former articles on "Library Notes." The text consists of a series of essays upon flowers that appeal most to the author's taste and are treated more in a literary and artistic way than in a practical or cultural manner. The main divisions are old fashioned flowers, which have three colored pictures devoted to them "The Old Fashioned Phlox" being a very effective one showing the flowers standing out in bold relief against some clipped trees. News of Spring has for its picture "Peach Blossom" while Field Flowers are represented by a pretty plate depicting "Foxglove and Dog rose." The final chapter "Chrysanthemums" has a plate of yellow, pink and bronzy earlies represented in bushy clumps. The typographical part of the book is executed in good style, old fashioned type heavily leaded being employed and every page having a wide margin.

The Sweet Pea Annual, 1907, (Charles H. Curtis, Hon. Sec., National Pea Society, Adelaide Road, Brentford, Middlesex). This is the third annual published by our English Sweet Pea Society the contents of which appeal more especially to members but which will also interest other sweet pea growers who are not yet within the fold of this young and prosperous special Society. Apart from purely society records the contents include the Bibliography of the Sweet Pea, Sweet Peas in British Columbia, The Sweet Pea in Table Decorations, Audit of the Society's Show, 1906, Picking and Packing Sweet Peas for Exhibition, Judging Sweet Pea Novelties, etc., etc. Numerous portraits and other illustrations abound. The work is supplied to members free but non-members can obtain a copy at the price of 1-2d. post free.

National Dahlia Society—Supplement to the Official Catalogue and Culture Guide, for 1907, (H. L. Brousson, Hon. Sec., Boyton, Foots' Cray, Kent). In the year 1904 this society published its most recent cata-

logue and guide containing numerous articles on dahlia culture by various specialists followed by the society's official catalogue of varieties. Supplements were issued in 1905, and 1906. A third supplement including all the most recent novelties has now been issued bringing the catalogue close up to date.

The Scots Gard'ner together with the *Gard'ners Kalendar* by John Reid, (T. N. Foulis, London and Edinburgh). There would appear to be a demand for reprints of ancient gardening books and several, including Parkinson's *Paradise in Sole*, have been executed by enterprising publishers. The *Scots Gard'ner* was originally published in Edinburgh in the year 1683 and consequently original copies are now scarce and very expensive. This reprint is edited by Alfred H. Hyatt but does not claim to be a fac simile for, if we remember aright, the reprint is smaller in size than the original although it preserves the language and style of the author. Reid's book was divided into two parts, the first treating of contrivance, the second of the culture of plants. Under the first heading the laying out and making of a garden are chiefly dealt with, the second part is cultural. In the editor's note, following an appreciation by Lord Rosebery, he points out that John Reid in his book sets forth in the plainest and homeliest way his idea as to what a model house should be and how the garden, both profitable and pleasant, should be arranged. A fac simile of the original title page is given. The book is uniform with the *Garden Lover's* series and is published in rough green cloth binding at rather less than a dollar in American money. Considering that John Reid was one of the very earliest Scottish writers on horticulture this little volume ought to have a special interest for many literary horticulturists.

A Garden of Pleasant Flowers, chosen and arranged by Alfred H. Hyatt, (T. N. Foulis, London and Edinburgh). In every respect this is uniform with the book first mentioned, and is a little volume compiled by the editor from John Parkinson's famous "*Paradise in Sole*," and contains descriptions of the most familiar garden flowers taken from that work. In the editor's preface, after giving a few details concerning the illustrious author, he says "the literary value of 'The Garden of Pleasant Flowers' cannot be denied, nor the charm of the author's description of his plants be over-estimated. In the following pages it has been my design to select from Parkinson's bulky volume a posy of these flowers with which we are most familiar." The spelling of the original edition has been adhered to throughout.

A book of *Sundial Mottoes* by Alfred H. Hyatt, (T. N. Foulis, London and Edinburgh). Although not strictly a gardening book this is included in the *Garden Lover's* series and is in every respect uniform with the two preceding. There are no illustrations of sundials as we might have expected but simply a collection of mottoes many in Latin, some in Italian, some in English. The foreign ones are translated.

Advertising

methods, old and new

The country is swarming with "ad-smiths," and "ad-writers"—turned out by correspondence schools and similar institutions, presumably ready equipped to show the business

man how to advertise his goods. Effective advertising

is an accomplishment of which but few business men are masters and there is undoubtedly a place for the intelligent assistant in this important department of business but, sooner or later, there is sure to be a reaction from the gush and superfluous small talk of present day publicity methods and a return to the use of simple straight-forward announcements of the kind of goods offered and their prices.

A hint for foreign exhibitors

Our foreign news notes on another page of this issue tell of the great Quinquennial Exhibition to be held in Ghent, Belgium, in April, 1908.

As our own national flower show is to take place in Chicago a few months later, this important European exhibition would seem to furnish those actively engaged in the work of preparation for the American affair a good index to the sensational novelties and other valuable things not yet known or appreciated here as they should be and an effort in the direction of inducing the exhibitors to participate in the exhibition here might yield some good results. Foreign growers of new varieties should make a note of the American National Show and arrange to put in an appearance. They will find the profession here most appreciative.

A duty to yourself

The action of the United States Express Company in only complying with the strict letter of the ruling of the Interstate Commerce Commission is a disappointment to many flower shippers who had reason to believe that the order of the Commission would bring them relief as well as their neighbors. There is no question that their interests will be protected in due time but the incident is an eye-opener as to the character and purposes of these monopolies whose services are indispensable to the flower and plant shipper. The most disquieting feature of the situation is the reluctance of so many of those who are suffering from the exactions of transportation companies to line up in support of the society which is practically the only medium through which relief may be obtained. Why not come to Philadelphia and help by your presence and advice in this and other movements which are under way for the benefit of yourself and your neighbors?

A remedy in sight

As a curb to the reckless tyranny of the common carriers the proposed parcels post seems to promise well and were it not for the powerful opposition of the Express Company interests in Congress a parcels post would undoubtedly have been established long ago. Are you interested? As a dealer in seeds, small plants, flowers, bulbs, cuttings and other articles which might be carried promptly, safely and cheaply by the Post Office Department, have you considered what the enactment of the proposed postal law might mean to you and the conduct of your business? If you have ideas on this subject bring them to Philadelphia. Action on such matters by the national society carries with it strength only in proportion to its numerical support. Individual activity in every Congressional district will compel attention. Come to the convention and assist in the adoption of some policy on which all can unite and then go out and work.

SEEN AT CRAIG'S.

A HOUSE OF CROTONS AND PANDANUS VEITCHII

Turnford Hall, the white form of the Lorraine Begonia, did not sell well last year and few of the Philadelphia growers are handling it in any quantity this season. The "Lonsdale pink" form is a favorite on account of its lasting qualities. A fair estimate of the proportion can be realized from the present growing crop of the Craig Co., which consists of five thousand of the Lonsdale, two thousand of the regular Lorraine and five hundred of the Turnford Hall.

Dracaena Lindenii has proved a good house plant but D. Massangeana is still better. Robert Craig tells of a plant at Haddon Hall, at Atlantic City, which has come through the winter in

perfect condition while many other plants succumbed to the hard conditions. This and D. fragrans are really two of the finest house plants we have. D. Goldiana is also a good one and unique in coloring.

Ficus pandurata, the new rubber plant with the big fiddle-shaped leaves, has made good in every way and gets more popular the longer we know it. Mr. Craig considers this one of the very best and most profitable of his long line of introductions. Over \$11,000 worth was sent out last season and nearly double that quantity is now under way. One house is devoted to plants in 12-inch tubs.

Many Philadelphia growers make

chrysanthemums their catch crop in advance of the Easter plants. A fine novelty in the chrysanthemum line this year is President Loubet which is not only very early (flowering in October) but is of show form and dimensions. The flower is a bluish white reaching ten inches diameter under ordinary conditions. A number of the new single ones that were so popular in London last season are also under way. Kitty Bourne, Lady-smith and Mrs. Roberts, are among the most distinct and valuable.

Juanita Walsh's sensational new Rambler rose, is a promising new thing for next year. The stock of it is very limited as yet, the Craig Company having the bulk. It is semi-double, carmine with white center.

A new croton that will be heard from by and by is a brilliant crimson variety as yet unnamed, raised by Edwin Lonsdale. It is a gem of the first water.

Perhaps the most interesting of all the fine things at the Craig place at present is the new fern (Amerpohli) to which five houses are devoted. It is being propagated by the Craig Co. under contract for W. P. Craig and bookings to the amount of over twenty thousand plants for fall delivery are already recorded. According to R. Craig (the elder) "there is nothing more beautiful in the vegetable kingdom than Nephrolepis Amerpohli," and we are inclined to echo him.

G. C. W.

GHENT QUINQUENNIAL.

Everybody in the horticultural world has heard of the fame of the great quinquennial shows organized by the Royal Agricultural and Botanical Society of Ghent. The next one will be held in April, 1908, and coincides with the hundredth anniversary of the foundation of the society. It is only reasonable therefore to suppose that the show and festivities next year will be on a much more important scale than ever.

Our Ghent friends are always in good time and we are not surprised to find that the program has been printed and circulated. It is an interesting brochure of 118 pages and contains the regulations relating to the show, and the classes in which exhibits are invited. In all there are 760 classes divided into 29 groups of which the following are some of the principal, viz., New plants, Orchids in flower, Stove plants, Palms, Ferns, Shrubs, Hardy plants, Carnations, Bulbous plants, Azaleas, Camellias, Rhododendrons, Ornamental cool greenhouse plants, Agave, Yucca, Aloe and succulents, Conifers, Fruit, Bouquets and floral art, etc.

As a horticultural gathering this show promises to be one of the most imposing we have had in Europe for a long time past and will be attended by all the leading horticulturists on this side of the Atlantic. The welcome is always of the heartiest character and Ghent hospitality is known the wide world over. We wish the society unbounded success in its great international undertaking.

C. H. P.

HOUSE OF ADIANTUM HYBRIDUM

You will find something worth reading on every page of HORTICULTURE.

NEWS OF THE CLUBS AND SOCIETIES

AMERICAN ASSOCIATION OF PARK SUPERINTENDENTS.

For the meeting in Toronto, Thursday, Friday and Saturday, August 15th, 16th and 17th, the trains and rates are as follows:

Leave Boston, by Boston, Albany and New York Central at 6.02 p. m. arriving in Toronto at 10.50 a. m. Single fare, \$12.25.

Leave Philadelphia, by Pennsylvania Railroad System at 8.25 p. m., arriving in Toronto at 10.50 a. m. Single fare, \$11.85.

Leave Washington, by Pennsylvania Railroad System at 7.15 p. m., arriving in Toronto at 10.50 a. m. Single fare, about \$14.50.

Leave Chicago, by Wabash Railroad at 3.00 p. m., arriving in Toronto at 7.50 a. m. Single fare, \$11.70.

Leave New York, by New York Central at 8.00 p. m., arriving in Toronto at 10.50 a. m. Single fare, \$11.85.

All these trains connect with the C. P. R., for Toronto at Suspension Bridge, with the exception, of course, of the Chicago train, which is a through train.

Each delegate should provide himself, at time of purchasing his ticket, with a standard railroad convention certificate, which upon presentation at Toronto, will entitle him to a one-third rate returning.

The headquarters are Queen's Hotel; rates, three dollars per day. The business sessions will be held in the City Hall.

The program as announced June 28th, has not been modified. We expect short papers as follows:

Theodore Wirth, "Band Concerts in smaller or District Parks."

W. J. Zartman, "Aquatic Gardens."

John Dunbar, "Some Trees and Shrubs for Park Plantings New or Little Known."

Dr. Frank Baker. J. F. Foster.

F. L. MULFORD.

Secretary-Treasurer.

LENOX HORTICULTURAL SOCIETY.

Owing to the illness of President Heeremans, Vice-president Jack occupied the chair at the regular meeting of the above society held Saturday, August 3rd. E. Jenkins was awarded a certificate of cultural commendation for an exceedingly well-flowered *Dendrobium Phalaenopsis Shroderae*. It was unanimously voted to have a field day, the date to be decided at the next meeting. The annual and perennial exhibition will be held in the Town Hall, Lenox, on Thursday, August 15 and from all accounts will be equal to any heretofore held by the society.

G. INSTONE, Sec'y.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Department of Plant Registration.

Julius Roehrs Co., Rutherford, Bergen Co., N. J., submit for registration; Rambler Rose, Newport Fairy. Fine dark pink, centre pale, very free flowering, strong and vigorous grower.

P. J. HAUSWIRTH, Secretary.

THE NATIONAL FLOWER ASSOCIATION OF THE UNITED

STATES, (Inc.)

Announcement.

Hartford, Conn., August 1, 1907.

The above-named Association solicits your co-operation in the movement to bring about the adoption of a national flower.

The desire for a floral emblem is now widely felt among the best people of our country; and the universal sentiments of love of our native flowers and love of our native land should find expression in a popular movement for the final adoption of one of the many candidates which have been from time to time so enthusiastically advocated by the various societies and individuals during the past years.

A renewal of the movement is now started and is being vigorously pushed by the permanent organization of the above Association, which is incorporated, and the funds of the Association are in the hands of bonded officers.

Among the class of people who should naturally be the first to become interested and also benefitted are the Florists and kindred branches inasmuch as they will be called upon to furnish the seed, plants and flowers.

A vigorous campaign is now in progress and your membership is earnestly solicited at as early a date as convenient. Do It Now.

We have the honor to remain,

Respectfully yours,

LEVERETT K. SEYMOUR,

National Sec'y & Treas., Hartford, Conn.

E. ALEXIS TAYLOR, President, Forestville, Conn.

WM. J. STEWART 1st Vice-President, Editor Horticulture, Boston, Mass.

J. C. VAUGHAN, 2d Vice-President, Pres. Vaughan's Seed Store, Chicago, Ill.

A. N. PIERSON, 3d Vice-President, Florist, Cromwell, Conn.

NORTH SHORE HORTICULTURAL SOCIETY.

This society held its regular meeting on the 2d inst., President McGregor in the chair. Certificates of merit were awarded for the following exhibits: *Lilium Canadense* by James Scott; sweet peas, hybrid sweet william and *Celsia Arcturus* by Herbert Shaw; pentstemons, asters and the new marigold Sunburst, by James Salter; gladioli and four seedlings of *Chrysanthemum maximum* x *Marguerite*, by Eric Wetterlow. At the meeting on August 16 the discussion will be on perennials.

W. T.

MASSACHUSETTS HORTICULTURAL SOCIETY.

Owing to the dry weather the exhibition on August 3 and 4 at Horticultural hall, was not so large as usual, although the displays were very beautiful, and there were fine exhibits of seasonable annuals and phlox. W. W. Rawson & Co., had a good display of dahlias. Owing to the popularity of the Sunday exhibitions, the society has decided to make them permanent features. Many old-home week visitors were in attendance.

NEW LONDON COUNTY HORTICULTURAL SOCIETY.

The exhibition at Norwich by this society, on July 30, was very successful, especially in the display of sweet peas, the collection of these flowers from the Morton F. Plant estate comprising 48 varieties. The same exhibitor staged herbaceous flowers. The gold medal contributed by Lyon & Ewald for the best exhibit of peas was presented to Thomas W. Head, superintendent of the Plant estate. Aug. Newman, gardener at the Alfred Mitchell estate also made a fine exhibit in various classes. The Geduldig estate, Mrs. W. C. Lanman and C. Lippit were represented by handsome exhibits of floral design work. There were some twenty other exhibitors mainly amateurs.

NEWPORT HORTICULTURAL SOCIETY.

The schedule of premiums for the September show of the Newport Horticultural Society is now in the printers' hands and will be ready for distribution in a few days. There are 77 classes in this schedule embracing plants, flowers, fruit and vegetables as well as many classes for made-up work including the decoration of tables with everything complete. There are quite a number of special prizes offered by friends of the society which include premiums for miniature flower gardens by Mr. Emery. Dahlias will be a prominent feature of this show. The exhibition will last three days and there will be some new attraction for each day.

NEW JERSEY FLORICULTURAL SOCIETY.

The regular monthly meeting was held at the society's rooms on August 2. The display included choice orchids from Julius Roehrs Co. and Joseph A. Manda, the latter showing a new variety of *coelogyne*; *salpiglossis* and the new sweet william, Annwell, by C. Hathaway; peaches by John Crosby Brown, Peter Duff, gardener; grapes by the Colgates; zinnias and vegetables by Stewart Hartshorne; orchids and *rudbeckia* by S. Dickson. J. A. Manda, A. T. Caparn and Edwin Thomas were the judges. Mr. McTaggart of J. M. Thorburn & Co., was present and pledged \$10 in the name of the firm for a prize at the forthcoming show. Chas. Schweinfurth was also a visitor.

ST. LOUIS HORTICULTURAL SOCIETY.

The incorporators of this society in their petition for incorporation state that their aim is to conduct flower shows in St. Louis, to hold State exhibitions, establish a bureau of information and provide a lecture course on horticulture. The following are the officers: Edward Mullinckoodt, president; Otto G. Koenig, secretary; F. C. Weber, treasurer. Besides these the others mentioned in the application are Andrew Meyer, Jr., Fred H. Meinhardt, Theo. Miller, A. Jablonsky, Harry Young, Emil Schray, J. H. Gimalach and F. W. Brockmann.

AMERICAN ROSE SOCIETY.**Chicago and the West for 1908.**

A meeting of the Executive Committee of the American Rose Society was held Wednesday, July 24th, pursuant to notice, at Hotel Martinique, New York. All members, including the members elect, were notified and a general response to the call followed. The main business before the meeting were three particular things. A final decision was made as to the character of the certificates to be awarded for novelties in addition to the gold and silver medals now offered; specimens of certificates were presented and one was decided upon, which will be worth having and preserving, also a certificate for life membership. There is a life membership fund now invested, amounting to \$2700.

Mr. Breitmeyer suggested that a committee be appointed to solicit life memberships, because the Rose Society, to do the work which it can do in creating a popular sentiment for the rose and in interesting the planting and growing of the same, needs permanent endowment of sufficient amount to enable it to be an organization of vital and permanent force, and with this end in view, President Simpson, upon motion, appointed the following members to take up this matter of soliciting life members: Philip Breitmeyer, vice-pres. elect, of Detroit, Mich.; August Poehlmann, Morton Grove, Ill.; Patrick Welch, Boston, Mass.; P. J. Lynch, West Grove, Pa., and Adolph Farenwald, Roslyn, Pa.

Some Splendid Prizes.

Mr. Hill reported on behalf of the E. G. Hill Co., that they would offer a sum of \$50.00 in a prize of prizes, as the committee may designate for the Chicago Show next spring. Mr. Hill suggested, in view of the splendid offers of Philip Breitmeyer and A. T. Boddington, that they ought to bring out a fine lot of exhibits and suggested that an effort be made to secure an exhibition in pots, of all the novelties, European and others.

President Simpson advised that the attention of all rose growers, and especially private gardeners, be directed to the offer made by Mr. Breitmeyer and Mr. Boddington, the former offering \$200.00 and the latter \$100.00, as first and second prizes for best exhibit of outdoor roses in pots, in bloom, exhibits to consist of 150 plants, not more than five plants of one variety, correctly labelled, and to include all classes of roses suitable for outdoor planting.

The officers of the American Rose Society are very much gratified at being able to offer such splendid premiums and hope that a goodly number of growers may enter the list as competitors and that as a result we may have the finest display of outdoor roses in Chicago next March, that has ever been made before that Society. They also suggest that the Rambler roses be well represented in this exhibit, also the Teas and Hybrid Teas and Noisettes as well as the larger Hybrid Perpetuals.

Some Encouraging Communications.

Mr. Hill also reported that he was one of a committee at the annual meeting to attend the American Nurserymen's convention, which he did, and

presented as best he could, the claims of the American Rose Society to the nurserymen assembled and of this meeting he said: "I was very cordially received and was given a good hearing. I do not know what the result may be but hope some good may come from the effort. It occurs to me that no one thing will so direct attention to our society or will excite greater interest in the exhibition, than to give full prominence to seedling roses and special encouragement to the originators."

A letter was received from Mr. Schupp, secretary of the Chicago Florists Club, stating that he was directed by vote, to say that the Chicago Florists' Club desired to co-operate with the American Rose Society to the fullest extent, to make the coming exhibition a success.

Mr. Curran of Salem, Va., said: "I am heartily glad to hear that the Chicago Florists' Club is taking an interest in the society's welfare and know that if we can once get a good hold on the people out there, that the success of the American Rose Society is certain. I would like to suggest that the Rose Society make an effort to disseminate among its members, in pamphlet form, accurate illustrations concerning fertilizers, insecticides, fungicides and soil chemistry, which in my estimation, would create much interest among the present members and have a tendency to attract the younger generation of growers. We want to give the members of our society something more in the bill of fare than a good time at conventions and shows; offer them the greatest help in the knowledge which they ought to have and which is not to be attained in the every day grind of greenhouse work. The co-operation of employers of labor in the rose-growing business is absolutely necessary to the advancement of their help towards obtaining a scientific knowledge of proper conditions governing the management and controlling of greenhouse work."

Mr. May stated that this suggestion was along the line which was offered at the annual meeting, that the Rose Society ought to have a quarterly publication.

Getting Ready for Chicago.

The schedule of prizes for next year was gone over and it was decided to adopt the schedule used at the Washington show. The list of special prizes has already been started with a considerable amount. It was proposed to call a meeting of the Rose Society to be held during the S. A. F. convention at Philadelphia next month.

The committee voted to direct the secretary to prepare and publish a report of the society and to circulate the same to all members. Mr. Farenwald moved that the secretary be directed to express to the Chicago Florists' Club, the thanks of the executive committee for their promise to co-operate and that east and west, north and south do their best to make the show first-class next spring and, in the mean time, every effort should be made to secure as many annual and life members as possible.

Mr. Hill reported that he understood that Alex. Montgomery, Alex. Scott, Peter Reinberg, Peter Bisset, Poehlmann Bros., Myers & Samtman, F. H. Kramer and the E. G. Hill Co., will

all have new roses to exhibit, and stated that the appearance of so many new varieties will, if properly advertised, add interest enough to bring out a big attendance at Chicago.

President Simpson said that he would leave for Europe on the last of the month and would not be present at Philadelphia; that he expected, while away, to visit some of the best establishments in England, Scotland and Ireland, and hoped to bring back with him some matters which would be of importance to all interested in the rose.

BENJAMIN HAMMOND, Secretary.

Special Meeting at S. A. F. Convention.

It is desirable that a meeting of the members of the American Rose Society and all who are interested in the rose and particularly such as are specially interested in the 1908 meeting in Chicago, be arranged for during the S. A. F. week in Philadelphia.

The eastern growers will there have an opportunity of meeting many of the western growers, and can perfect arrangements for the convention and exhibition much more readily than can be done by correspondence. I would strongly urge upon the rose growers who may be in Philadelphia, the importance of arranging to attend this meeting and lending their influence and assistance, moral and material to make the 1908 meeting by far the best in the history of the American Rose Society.

Our Secretary, Mr. Hammond, will be in attendance at the S. A. F. Convention and will arrange for the time and place of the rose meeting, and announce the same in due course. I regret that I will not be able to be present, but Vice-president elect, Mr. Breitmeyer, will be present and will preside over the meeting.

ROBERT SIMPSON,

Pres. A. R. S.

AMERICAN CARNATION SOCIETY.**Carnations Registered.**

By W. N. Rudd, Mt. Greenwood, Ill. "Defiance." Color bright (so-called) scarlet, size easily grown two and three quarter inches, stem long and stiff, habit upright with no superfluous grass, breaking quickly and strong when topped; growth strong and clean with no tendency to disease; foliage medium wide with heavy bloom and good blue color. Origin, cross between Estelle on a seedling, having Argyle, Mrs. McBurney and Maceo blood, cross made 1902. An early, free and continuous bloomer believed to be a first class commercial scarlet.

"Sincerity." Color deep Daybreak shade, hot sun deepens instead of fading color; size easily three inches; stem like that of Enchantress long and reasonably stiff; habit fairly upright with little superfluous grass, growth strong and clean; foliage medium wide, blue green with medium bloom. Origin cross of 1904, two seedlings running back through many generations to Daybreak and Wm. Scott. An early, free and continuous bloomer which by reason of its color and good shipping qualities should take a place as a standard commercial sort; can be grown to exhibition standard.

ALBERT M. HERR.

Lancaster, Pa.

S. A. F. CONVENTION PRELIMINARY NOTES.

RAILROAD RATES TO PHILADELPHIA CONVENTION.

Members are advised that the Trunk Line Association, in whose territory Philadelphia, our meeting place, is located, has granted a special rate of one and one-third fare on the certificate plan.

This rate has been concurred in by the New England Pass. Ass'n., Geo. H. Watson, secretary; South Eastern Pass. Ass'n., Joseph Richardson, chairman; Eastern Canadian Pass. Ass'n., G. H. Webster, secretary.

Instructions for Members Who Live in Territory of Central Passenger Association.

Members are advised that The Central Passenger Association will not join in the reduced rate of a fare and one-third, for the reason that a number of States have provided by law for a standard rate of two cents per mile, particularly in the territories covered by this association. It has, however, made a special concession to our society in that it will sell a round-trip ticket to Philadelphia at the rate of two cents per mile in the territory covered by this association, and at the reduced rate of a fare and one-third through the territory covered by the Eastern, Canadian and Trunk Line Associations. This special concession is only for those attending the session and not for the general public. These special tickets can be obtained only on card orders secured direct from P. J. Hauswirth, Secretary, 232 Michigan Ave., Chicago, Ill. The Central Passenger Association has furnished the Secretary with these card orders, and should you reside in the territory covered by the Central Passenger Association, which includes practically all points between Chicago and St. Louis on the west and Buffalo and Pittsburg on the east, and desire to take advantage of this special concession you must obtain from the secretary a card order.

In writing for card orders be sure to give the number required as each person must have one.

Instructions for Members Living in Territory of Western Passenger Association.

The following letter has been received from Mr. Eben E. MacLeod, Chairman of the Western Passenger Association, which controls territory west of Chicago and St. Louis:

"Mr. P. J. Hauswirth, 232 Michigan Ave., Chicago, Ill.

"Dear Sir: Referring to your application for reduced fares account above named occasion:

"We have been requested by the individual lines interested in Western Passenger Association territory to refer you to the revised one-way Summer Tourist fares in effect to Chicago and St. Louis, with the understanding that persons can repurchase from those points and take advantage of the reduced fares authorized therefrom.

"In order that you may fully understand the situation, beg to state that the fares to Chicago, Peoria and St. Louis from a large part of our territory at the time of your meeting will be on the basis of two cents per mile, hence if persons desiring to attend same will purchase tickets to those points and then rebuy at the reduced fares authorized therefrom, they will secure practically the same reduction in the territory of this Association as would be accorded

by fare and one-third on the basis of the old rates. Summer tourist tickets will be on sale to Chicago and St. Louis from points west of the Missouri River and east of and including Denver, Colo., and Cheyenne, Wyo., at approximately fare and one-third of the fares in effect February 1, 1907. These fares will no doubt satisfactorily take care of persons desiring to attend your meeting from the territory mentioned.

"Respectfully,

"EBEN E. MacLEOD, Chairman"

P. S.—"It is suggested that the delegates residing in Western Passenger Association territory be furnished with Central Passenger Association card orders, so as to enable them to take advantage of the reduced fares authorized from Chicago, Peoria and St. Louis.

E. E. M."

The secretary recommends that members living in this territory purchase Summer Tourist tickets to Chicago or St. Louis, and then avail themselves of the rates mentioned above as offered by the Central Passenger Association.

Jamestown Exposition Rates.

Members are notified that they can purchase cheap railroad tickets which will permit them to attend the convention at Philadelphia and then visit the Jamestown Exposition at Norfolk, Va., on the route home at very low rates.

Full information can be secured from your local ticket agent.

P. J. HAUSWIRTH,
Secretary.

CHICAGO TO PHILADELPHIA.

The Chicago Florists' Club, and the visitors who can join them either at Chicago or on the way, plan to use the following route, Pennsylvania Railroad.

Leave Chicago Sunday, 3.15 p. m., arrive Philadelphia Monday, 6.10 p. m. The fare, including trip to New York City, is \$26.70 for the round trip. These tickets are good for 30 days. They are entitled to 10 days stop over in Philadelphia after which the delegates must go to New York and have their tickets vised there and certified to by C. A. Thorley, a member of the New York Merchants Association.

Delegates can then return if they desire via Washington, where they may stop over ten days, making a side trip to Norfolk, or they can return direct to their destination in the west.

Delayed members who cannot take the above train can leave Chicago at 10.05 Monday a. m. via Pan Handle and arrive Philadelphia 12.17 Tuesday noon. Fare by the Pan Handle is \$2.00 less than the above, or \$24.70.

For further information address George Asmus, 797 W. Madison St., Chicago.

W. N. RUDD,
GEORGE ASMUS,

Transportation Committee, Chicago Florists' Club.

NEW YORK TO PHILADELPHIA.

Arrangements have been made for the Convention party to leave New York, via the Pennsylvania Railroad at 9.55 A. M. from West 23rd Street and 10.00 A. M. from Desbrosses & Cortlandt Streets, New York City. Tuesday, August 20th, and those desiring to attend should communicate with John Young, secretary of the N. Y. Florists'

Club, 51 West 58th Street, in order that special cars may be secured.

The dates of sales will be August 15th to 21st inclusive, tickets to bear final return limit of August 28th, 1907, the cost of round trip, on the certificate plan, being \$3.00.

ST. LOUIS TO PHILADELPHIA.

Regarding the number who will attend the S. A. F. Convention at Philadelphia from here W. C. Young, State Vice-president, says that he has enough promises to fill the special sleeper that the Penna. R. R. has given us for our special use. The Florists' Club meeting this week will no doubt bring in attendance all that are going from here. It is also expected that by the time for leaving quite a good many from outside the city will travel with our party. One thing seems certain, that St. Louis will not be represented in either the bowling or shooting contests.

FLORISTS' CLUB OF PHILADELPHIA.

Routine matters were quickly disposed of at the monthly meeting of this club held on the 6th inst. Convention details and a talk on native plants by George Redles were the chief features. After these, president Samuel Sellers Pennock resigned the chair to the Honorable William B. Smith who acted as master of ceremonies in an evening of fun, frolic and business. The business part was an exhibition—and competition for prizes—of the new Nephrolepis Amerpohli. About nine entries were made and the first prize went deservedly to William Robertson for a finely developed trio. William Kleinheinz took second and Thomas Long third. Joseph Hurley showed some fine zinnias.

An original song by Robert Craig, Jr., was ably sung by Horace Dumont and a well trained chorus. William Wunder gave some of his whirlwind orations and kept the house in a roar half the evening. Edward J. Dooner supplied the plaintive and appealing with his lovely tenor in such things as "Kilkenny" and "Oft in the stilly Night." Captain Lynch, Alfred M. Campbell and Charles O'Donnell, added their quota in acceptable form. Martin Gagnon presided at the piano. Refreshments were dispensed during the evening. Robert Craig, Sr., John Nephrolepis Amerpohli. About nine P. Craig, Dan. Farson, and others of lesser degree attempted to make speeches and made a fine target for the effervescent toast master. Altogether it was a grand evening. G. C. W.

AMERICAN CARNATION SOCIETY.

A meeting of the Board of Directors of The American Carnation Society will be held at the Hotel Walton, Philadelphia, Pa., Thursday, August 22, immediately after the adjournment of the evening session of the S. A. F.

Programme and premium list for our meeting in Washington next January will be adopted and all members are invited to meet with us.

Try and get a few new members from your section. Dues the first

SOCIETY OF AMERICAN FLORISTS

YOU ARE INVITED to visit us during convention week, any day at your convenience.

ANDORRA presents a unique Nursery—six hundred acres of hilly land, containing over three hundred and fifty acres of **Ornamental Trees, Shrubs, Vines, and Perennials.** Our **Location** permits us to grow many varieties both in deciduous and evergreen trees and shrubs that cannot be grown to advantage North or South of this latitude, and thus adds to our extensive collection many desirable and decorative plants.

ANDORRA has been called **The Modern Landscape Nursery.** The lay-out of our land, with its hills, valleys and woodland, permits the planting of trees and shrubs in natural positions, thus affording planting suggestions at every turn.

ANDORRA is easily and quickly reached from the Convention (Horticultural) Hall by the Pennsylvania Railroad from Broad St. Station (at Broad and Market Sts.) to Chestnut Hill Station; then by trolley, which passes the depot, to the City Line. Our office is one block from the trolley terminus at the City Line.

REMEMBER, this is a personal invitation to **YOU.**

MASSACHUSETTS AGRICULTURAL COLLEGE.

Summer School of Agriculture.

The summer school of agriculture conducted for the benefit of school teachers at Massachusetts Agricultural College this year closed Friday noon, August 2. It was unanimously voted a success. The total attendance was 212, nearly all of whom completed the entire term, and 184 of whom received certificates for courses completed. The students of the school formed themselves into a permanent organization and elected Supt. Chas. W. Haley of Milford, Mass., president. Enthusiastic resolutions of praise for the summer school and the Agricultural College were adopted, and the association pledged its support in all the future development of the college.

Careful inquiry reveals the fact that practically every one of the teachers is engaged for the year, so that the new ideas which have been developed in the summer school courses will be quickly distributed to more than a hundred and fifty schools in all parts of the country.

This is the first summer school ever held at Massachusetts Agricultural College, but the success of the experiment insures the continuance of the work. The official announcement that there would be another summer school next year met with great favor amongst the teachers. About one-third the entire number registered for next year before leaving.

You will find something worth reading on every page of HORTICULTURE.

During Recess

*"Hang Sorrow; care will kill a cat
And therefore let's be merry."*

SLOGAN.

Messrs. Graham, Cartledge and Beneke; members of the National sports committee; the three men to whom we have intrusted all that is historic, sacred, and glorious in the annals of past achievement:

Gentlemen:—

What are you doing? We hear not a word from New York, Chicago, Boston, St. Louis, Buffalo, Detroit, Flatbush or Kalamazoo. A faint ripple appears in the calm waters of Philadelphia but outside all is deadly still. Do you, our three champions, advance agents, realize the situation? Is there to be no fun after the arduous mental sessions of the Society? Have you written to the bowlers and shooters of every club in the country to get busy? Printing your name on the committee list isn't all! As the commodore has said many a time: "To keep school first get the scholars." Lots of young

and frivolous ones come to the convention only to bowl. It is up to you to get them to Philadelphia and they are dumb indeed if they don't carry away something. G. C. W.

CLUB AND SOCIETY NOTES.

The New Haven Horticultural Society entertained the members of the Hartford and New Britain societies on August 1. A tour of the parks was made, a shore dinner was served at Savin Rock and the entertainments at the shore enjoyed until evening.

The Apple Growers' Congress will hold its annual meeting in St. Louis on August 13 and 14 at the Southern Hotel. Senator Dunlop of Illinois is President and W. H. Williams of Hannibal, Mo., is secretary. A large delegation of apple growers from all over the western states is expected to attend the meeting. Director Trelease of the Missouri Botanical Garden has invited the delegates to attend the annual Shaw banquet to be given on Wednesday night, August 14, in the banquet rooms of the Southern Hotel, at which plates for 400 will be laid.

A CORDIAL WELCOME

is tendered to all attending the Annual Convention of the S. A. F., to be held in Philadelphia, August 19-23. Our extensive, up-to-date establishment will give you a place to meet your acquaintances. We will have a number of interesting things to show you. Have your mail addressed in our care while in Philadelphia.

We've a Handsome Souvenir Waiting for You.

HENRY F. MICHELL CO.

1018 Market Street, PHILADELPHIA

Seed Trade

Still another week of favorable weather for crops, and corn has responded nobly. Eight or ten weeks more of such weather and we shall get a corn crop. But shall we get such weather for eight or ten weeks? Who dares say yes?

Estimates as to percentages which will be delivered of the present season's pea crop are a trifle previous, but there will be a heavy shortage in canners' varieties, as nearly every grower was oversold, and the same may be said of the large podded sorts, such as Gradus, Stratagem, Duke of Albany, Telephone, etc.

This tendency to oversell is very general, and is mainly due to estimating the yields too high. It is the almost universal practice to estimate plantings of nearly every variety of peas at not less than five-fold; a few varieties at six and seven and not above two or three under five-fold. This standard was established many years ago, and doubtless was the normal average yield at the time, but two important factors seem to be overlooked in estimating yields of peas; one is the soil and another is the relative vigor of the variety. A new variety of great vigor and hardiness, and with a strong soil just suited to peas, and virgin to this crop, may yield seven or eight-fold, but in a few years the variety begins to lose its vitality and the soil becomes impoverished in the elements necessary to produce peas or any leguminous crop, and the yield decreases. Failures become frequent, and as the variety declines in vigor, the tendency to depart from its true type increases, until it "runs out" and becomes a sort of "mongrel." The same conditions obtain throughout the vegetable world, though deterioration in peas may develop more readily than in many other families of plants.

In estimating the yields from his plantings, the grower fails to take into account this deterioration as a rule, neither does he make due allowance for deterioration in the soil, and the result is that, instead of harvesting crops averaging five and six-fold, he much more often gets only three and four.

The principal seed pea growers have been interviewed on this point, and they are unanimous in declaring that not oftener than once in five or six years have they had an average of five-fold from their entire plantings. Notwithstanding this fact, they year after year base their prices on a five-fold yield, and judging by this standard, one might think many of them expected ten-fold!

Taking five-fold, however, as the generally accepted standard, it is easily seen that where the price is based on this fold, and it proves to be the only three or four, as is positively the case four years out of five, the grower loses twenty to forty percent of his expected crop, and instead of a profit, he works for a year practically for nothing, and sometimes even suffers a more or less heavy loss. Whatever fold he gets from his acreage one fold must be reserved for seed. Thus if he gets five-fold, he has four-fold to deliver on his contract. If he gets four-fold, he has three to deliver, and if he gets three-fold, he has but two to deliver.

Assuming Alaskas cost him \$2.00, and they will not cost much less, if he gives them the care they should have, and also takes account of the wear and tear of his plant and machinery, he can sell them at \$2.25 making a profit of 25c per bushel on a five-fold yield, but if his crop is only four-fold, he just about breaks even, while anything under four-fold means positive loss, and this loss is in proportion to the shrinkage of the crop below four-fold.

These are not imaginary figures or estimates, but are based on facts, and explain why so many growers of peas and beans who have sold hundreds of thousands of bushels in the aggregate, have so little to show for their life's work, and almost without exception they are temperate, frugal men. How long they will continue as they have been doing for at least the lifetime of two generations of growers, can only be conjectured, but it is mainly a test of financial endurance, those with the largest financial resources and relatively smallest expenses enduring the longest.

Why do not the principal growers who should be fully alive to the facts here stated, recast their schedule of prices, and base them upon actual results, and not upon yearly estimates which seldom meet expectations? Certain it is that none of them are making much profit from their business, and as time goes on they will make less instead of more, as deterioration in both seed and soil will continue.

THE LILY BULB OUTLOOK.

Reports come to hand from Japan to the effect that the plant-louse has caused fatal injury to the Japan longiflorum and multiflorum lilies in Bashu and Miura districts, the estimated loss on bulbs being 40 per cent. From the Azores we are informed of a considerable shrinkage in quality due to the long-continued dry weather of the past six months, which has unfavorably affected lilies, callas and other similar crops. The supply is up to expectations but the bulbs are undersized.

Large sized giganteums are decidedly scarce in all markets.

News Notes

Albert Miller has accepted a position with A. G. Lindquist, Woburn, Mass.

The Arverne Floral Parade Association, Arverne, N. J., will hold their floral fete on August 31 and September 2.

Charles Finnacom of Dracut, Mass., was given a birthday and surprise party on July 27 and presented with a gold ring.

The officers of the newly organized Joliet Nurseries Co., Joliet, Ill., are J. H. Ferris, president, C. T. Shepherd, Jr., sec., Col. Bennit, treas.

J. E. Schaefer, florist at the Rhode Island College, Kingston, will resign his position on September 15, to enter upon duties in New Jersey.

Dreamwood, Thomas W. Lawson's farm at Scituate, Mass., boasts fourteen miles of Crimson Rambler roses, literally enclosing the grounds.

Bozeman, Montana, will hold a sweet pea carnival on August 22. The improved appearance of the lawns, gardens and street fronts, since the carnival of last year, promises to make this an annual feature.

At a meeting of the State Entomological Commission of Kansas held at Topeka on July 22 it was decided that all nurseries in the State shall be inspected between June 1 and November 15 and if found free of injurious insects shall receive a certificate. Without this certificate nursery stock cannot be sold in the State. Notice to this effect will be sent to all transportation companies.

"A Salem paper says that strawberries have been so plentiful in Danvers and Peabody that farmers have been glad to get rid of them at four cents a basket. If this is the fact, the question is who sidetracked those strawberries on the way to Boston."—Boston Transcript.

AT PHILADELPHIA

We shall make the most remarkable Exhibition of **Sterling Novelties in Florists' Supplies** ever seen on this continent.

It will be one of the big sensations of the S. A. F. Convention.

These goods have all been personally selected by Mr. H. Bayersdorfer who has spent many weeks in the largest and most progressive **European Sources of Supply**. A life time devoted to this work has equipped Mr. Bayersdorfer with a discernment of the distinct needs of the American market possessed by no other buyer. **Send for Catalogue.**

FLOWER MARKET REPORTS

BOSTON A few banquets took place during "Old Home Week," but the call for flowers for these affairs made no appreciable impression on the flower trade and those who looked for a pronounced demand during that period were doomed to disappointment. There is a vast amount of small and almost valueless roses coming in at present; carnations are almost out of the running; sweet peas are over stocked badly and bring but very little return; lily of the valley which hung fire for some time past has begun to strengthen; Shakespeare gladioli is a good seller at present; asters are more abundant and rapidly falling in value. This about covers the ground so far as the staple market flowers are concerned.

BUFFALO Business for the past week was as good as could be expected, and at the end of the week a good clearing up was had on everything save green goods. Asters have not come in very plentifully therefore the carnations such as there are, are picked up quickly. Lilies have sold well, the supply being normal and quality fine and have been a great help for those who were fortunate enough to have floral design orders. Peas have shortened in supply and sell more rapidly than in previous weeks. Lily of the valley has been on the shelf for some time; no demand whatever. Beauty, Kaiserin and Carnot roses are in good supply and selling well.

DETROIT The local florists can with pleasure look forward to a heavy season, for the competing forces are increasing very little while the city itself is growing ever so rapidly; the only thing which may mar our hopes may be some weak-knee among us who will be induced through some weird logic in his brain to cut prices. At the present time vacations are our main topic of interest.

INDIANAPOLIS We are now experiencing the worst of the summer season. Stock inside is at its worst, while out door flowers are below the usual grade of quality. The recent hot weather has sent society to the different resorts and naturally flowers find little demand. No good roses are to be had. A few good Beauties are seen but supply is short of demand. Asters are coming stronger but it will be several weeks before they will be in full supply. Gladioli are plentiful and sell well. Fine growing weather has prevailed throughout the season with just enough rain to insure a steady, healthy growth, and it has put plants in a splendid condition; chrysanthemums especially are making a good showing.

NEWPORT Newport is at present in a flourishing condition. Business is beginning to boom in a way it has not boomed in many years. The city is just simply filled up with people; that being the case, how can it be otherwise than a good season and if any man feels the other way about it the chances are that it is his own fault. Good flowers in all classes are finding a satisfactory market except where they are in over-production for the moment.

NEW YORK There is little to be said concerning the flower trade of this city at present writing, mainly because there is not any worth talking about. Somnolence profound prevails in and about all the retail and wholesale establishments, the latter only furnishing an exception when awakened by the unintelligible but forcible jargon of the swarms of Greeks or when some out-of-town cemetery florist gets a big order and comes in to buy the stock to fill it, the usual purchase in such cases being a cargo big enough to fully occupy the entire platform of a 28th street horse car and cause conductors and drivers to lift up their voices in loud protest. The money usually paid for such an outfit would just about buy enough flowers to fill a collar box in the good old winter time.

PHILADELPHIA For midsummer the volume of business has been very fair with normal market as to prices and supplies. Asters are now very plentiful and arriving at the rate of from 200,000 to 300,000 blooms daily but sell fairly well and fill the gap usually occupied by carnations which are now coming in very sparingly. Roses are also in short supply, especially Beauties and good pinks. Kaiserins are more plentiful and some good Libertys are arriving and lily of the valley. Cattleyas keep in fairly steady volume with good demand. Gladioli are much appreciated at present. Auratum and speciosum lilies find ready takers. There is very little demand for other garden flowers. Cold-storage peonies show up well and are a choice and welcome item.

TWIN CITIES Trade is quiet and the most of the florists do not expect to do much until the fore part of September. Roses continue scarce and it is difficult to obtain good summer stock. Chicago is practically the market. Prices have not dropped. Sweet peas are moving nicely and a great variety is handled by all the dealers.

You will find something worth reading on every page of HORTICULTURE.

H. BAYERSDORFER & CO.'S NEW ESTABLISHMENT.

We take much pleasure in presenting, herewith, a picture of this, which we believe to be the most complete and extensive florists' supply house on this continent. It is the culmination of more than a quarter century of persistent enterprise and unremitting industry and we are sure our readers will join us in congratulations to this well-known firm on their success as indicated in this spacious

plant. Open house will be the rule during convention time and there is to be a special reception on the roof, as announced in the prospectus of the local entertainment to be offered the S. A. F. visitors in Philadelphia. No doubt every attendant at the convention will visit, at least once, Messrs. Bayersdorfer & Co., and we can promise them that every floor of the big house will present a surprise in the variety, beauty and utility of its contents.

The greenhouses of C. J. Harvey, Needham, Mass., were slightly damaged by fire on August 1.

SHRUB CHAT.

Just now the prairie rose, last but not least of the garden roses, is loaded down with its profusion of satiny pink bloom. This glorious garden and pillar shrub is not known or appreciated as it should be.

Rhododendron maximum is about through flowering. It is a pity that this useful evergreen should have to qualify its standing as a garden shrub by a comparison with the earlier and in every way more showy fancy hybrids. Its inferiority of foliage effect, its more straggly growth, monotony of flower color and habit of obscuring the bloom with the young growths are serious handicaps in the estimation of those who are familiar with the hardy hybrids. Here is a shrub that invites improvement at the hands of the plantsman and hybridist.

The loniceras, which a few weeks ago were objects of beauty, laden with honeyed bloom are again attracting attention with their wealth of crimson, scarlet and orange fruit, no less beautiful than they were in their spring dress.

Spiraea Anthony Waterer has been condemned for its untidy brown seed masses which follow the dropping of its attractive pink bloom. It certainly is a most objectionable habit for an otherwise superb garden shrub. But its readiness to keep constantly blooming all through the season if given a little attention atones for this one drawback which can be overcome by a little time and trouble spent in trimming back the branches as fast as they go out of flower. On a large place where planted in quantity this is not always practicable but in any moderate-sized garden there is no good excuse for neglecting it.

For covering buildings, walls, or any other object with a rapid growing vine nothing can excel *Actinidia arguta*. When well established the stems will grow at an incredible rate and the massive dark foliage is exceedingly rich and effective.

Rosa lucida alba—so-called, but possibly a distinct species, found some years ago in Deerfield, Me., is now becoming pretty well distributed among the gardens in the neighborhood of Boston. It is a late bloomer very free and vigorous, the flowers snow-white and deliciously fragrant. Unfortunately it usually falls victim to myriads of rose bugs which finding no other roses to feed upon except setigera (which, by the way, they for some reason avoid) pounce upon this and riddle and tear the petals to shreds totally destroying its beauty. One of these bugs, of red color, with pointed snout and rather smaller than the ordinary rose chafer is more destructive, if possible, than this better known pest.

Ligustrum Ibo, although lacking the luxuriant and glossy foliage which makes its relative ovalifolium or California privet so seductive, has the advantage of hardiness where the latter is liable to winter-killing and makes a very attractive single specimen on the lawn or in the mixed shrubbery border with its symmetrical form and arching branches laden in July with fragrant white flower clusters of which the bees are very fond.

HYDRANGEA PANICULATA GRANDIFLORA.

Our frontispiece shows a handsome hedge of this well-known garden shrub and indicates a use for it at once effective and appropriate. Owing to the lateness of its leafing out in spring and the earliness of its leaf-shedding in fall this shrub is not well adapted to the purposes of a hedge proper but as a facing for a high hedge of other material or against a background of any dark green foliaged shrubs or trees it has few rivals. If planted where shade strikes it through the mid-day hours the flowers will retain their whiteness in perfection for several weeks. If cut down almost to the ground every spring and given plenty of stimulant enormous heads of flowers will be produced on stiff stems of great length. The above facts are generally known to florists and others. It is not so well known, however, that by pinching out the flowering tips as soon as they begin to form, usually about July 1 to 5, the crop may be retarded and an abundance of late flowers secured at a period when the cool weather keeps them pure white for a considerable time and when they will come in very acceptably for floral decorative work.

Alexander McConnell of New York City sailed on S. S. Oceanic, July 31, on a pleasure trip to England, Ireland, Scotland, Isle of Man, France and Germany. He expects to reach New York again about October 16. This is Mr. McConnell's first trip across the Atlantic in 22 years. A host of friends will wish this genial and universally beloved representative of New York's retail flower trade "Bon Voyage" and great physical benefit from his well-earned vacation.

Special Philadelphia Convention Number Will Be Issued August 17.

It will reach the best trade at the convention and all through the country.

DEMAND FOR NURSERY STOCK IN CHINA.

Vice-Consul Ernest Vollmer, writing from Tsingtau, gives the following account of the newly created demand in that part of China for fruit trees which he thinks, American nurserymen should supply:

"The German forestry department for the Kiaochow territory, with headquarters at Tsingtau, has within the last few years planted a large acreage in forests, using mainly acacias, but also oaks and many varieties of pine. Aside from this purely forest work a large experiment station is located at Tsingtau.

At this station extensive investigations have been conducted with pear, apple and plum trees from Germany and California; cherries from California, and native peaches and apricots, besides berries of all sorts. The success with this imported stock has been so satisfactory that the fruit business will be entered into on a large scale and it is hoped to make Shantung one of the greatest fruit-exporting countries in the world.

In order to expedite matters and create an interest among the native farmers, 66,000 grafted and budded young trees were distributed free among the Chinese last year, and even then the demand was not nearly filled.

It would thus seem that the California fruit trees and their merits are known to the German officials, but the native simply knows that he can get a few trees free from the forestry department. Seeing the higher price the fruits from foreign trees bring, the Chinese are naturally anxious to get as many trees as possible, and this causes a shortage. With the German Government fostering the fruit industry and every possibility of its high development in this district, a great field should soon be opened to the American nurserymen. California trees have proved successful here, and, with a rapidly growing demand, it would pay Americans to go after the business."

We are in receipt of a very pleasant letter from Mr. A. Leuthy, of Roslindale, Mass., written from Hotel de la Poste, Ghent, in which he gives us the following information:—

"The stock of azaleas in Gand is far behind that of other years on account of the cold weather. The buds are not set yet but with warm weather they will be all right in two or three weeks. Palms are very high in price; on some of the places they do not know how much to ask for them and in many places they are forced so hard they would not stand shipping. Tuberous begonias are also far behind the growth of other years. The hybrid roses are just in full bloom at present; also, the bedding plants in the parks and gardens never looked better than this year.

"I am trying to get back to New York on the 17th of August and will attend the convention in Philadelphia if possible.

"The weather here is very pleasant as well as the surroundings. There are several American florists at this hotel, some from New York, others from Philadelphia, and still more coming."

A RECORD PRICE FOR A CHRYS-ANTHEMUM BLOOM.

Those of your readers who are old enough to remember the sale of Mrs. Alpheus Hardy, a hairy Japanese chrysanthemum of some repute eighteen years ago, will be interested to learn that big prices are not wholly confined to your side. A short time since there appeared in a London illustrated newspaper called "Sketch" a portrait of the Princess Von Hohenberg and an illustration of a bloom of the chrysanthemum called Sada Yacco a variety raised by Nonin of Paris.

The following interesting note accompanies the portrait and picture of the flower. A music exhibition held at Trieste, under the presidency of the Archduchess Friedrich, was a failure and to pay off all the debts incurred a number of Austrian ladies organized a Flower Show. Among the visitors was Sophie, Princess von Hohenberg, wife of the heir to the Austrian throne, who, after asking how much money was still wanted, and learning that £8000 (or about \$40,000 in American money) would set matters right, paid that sum for the single bloom shown. Apart from the charitable intent this may be taken as a record of first magnitude. C. H. P.

PUBLICATIONS RECEIVED.

The New York Agricultural Experiment Station has issued a popular edition of bulletin 281 on Miscible Oil Sprays, summarized by F. H. Hall. The conclusions intimate that the proprietary scale remedies of the miscible oil class are too expensive for general use by orchardists and that, in order to be effective, they must be used in considerably greater strength than recommended by the manufacturers.

As showing something of the amount of work the State Experiment Stations are called upon to perform it is interesting to learn from the report of the director of the New York Agricultural Experiment Station that in one department alone, that of fertilizer inspection, the station annually receives for analysis from the Commissioner of Agriculture from twelve to fifteen hundred samples of fertilizers and feeding stuffs, requiring upwards of eight thousand single chemical determinations. Some of these determinations are rendered more time-consuming by the fact that occasionally they must serve as testimony in court. These samples are known to the station authorities only by number. As these analyses are the basis for determining whether fertilizer manufacturers are violating the law as to the quality of their goods, it is necessary to surround this part of the work with all needed precautions as to accuracy. The station's part in fertilizer inspection is one of the most laborious and expensive duties that it has to perform.

VICTIMS OF HAIL STORMS.

The Yuess Garden Co. and the Schaefer Co., Newburgh, N. Y., lost heavily recently, without insurance,

T. G. Yale, Wellington, O., on July 25. H. F. Drury, Galesburg, Ill., July 24; heavy losers.

C. J. Burdell, Bowling Green, Ky., between three and four hundred lights destroyed.

OBITUARY.

Mrs. C. J. Inloes, mother of Mrs. C. E. Critchell, Cincinnati, O., died on July 29.

Mrs. Harriet S., widow of Orange Judd, for many years editor of the American Agriculturist, died at Springfield, Mass., on August 2, aged 64.

James Young, Hartford, Ct., died of tetanus on July 26. He came to this country from England in 1892 and for eleven years has conducted a florist business in Hartford. Mr. Young was about 40 years old, was a member of several fraternal organizations and highly esteemed in the community. A widow and five children survive him.

Frederick L. LaFrance, of the LaFrance Carnation Co., Elmira, N. Y., died suddenly on July 28 at his summer residence at Port Bay, Lake Ontario. Mr. LaFrance has been a life-long resident of Elmira, and about nine years ago started in the florist business. He was forty-five years of age. A widow and two daughters survive him.

William H. Traendly, who has conducted a retail flower business on West 17th street and at the Cafe Martin, New York City, for a number of years, died at New York Hospital on August 2, aged 45 years. Mr. Traendly had been ill but a week with a rheumatic trouble which affected his heart and caused his death. The interment took place on Sunday. He leaves a wife and two children. He was a brother of the well-known wholesale florist Frank H. Traendly.

RUMORED DROWNING OF EDWARD HEACOCK.

At this writing (August 7th) the Heacock family at Wyncote, Pa., are in a state of keen suspense over the news received yesterday from British Columbia. The details so far are meagre. All that is known positively is that the canoe upset; that Edward clung to the overturned craft and that his companion swam ashore. Later the canoe was recovered but all the rest blank. Edward Heacock is the second son of Joseph Heacock the well known palm and rose grower. He went on a pleasure trip to British Columbia some time ago. This tragedy—as there is only too much reason to think it will turn out to be a tragedy—has cast a gloom over the entire community here. We earnestly hope that some trace of the missing man may be heard of soon. The sympathies of everyone will go out to the stricken household in their great sorrow.

ELIOT, ME., Aug. 7.—There was a head-on collision between two open electric cars on the Atlantic Coast line at Kennard's Corner here tonight, when three persons were seriously injured and several others thrown from their seats and bruised.

Mrs. William H. Elliott, of Brighton, Mass., and Madbury, N. H., her summer home, was thrown from her seat to the ground, receiving injuries to both hips and a scalp wound. Boston Post.

We sincerely trust the above account is exaggerated and that Mrs. Elliott has sustained no serious injury.

Yes, Some People are Built That Way

They are always ready to take up any absolutely new thing that comes along, just because it is new, and seem to think its immediate adoption is kind of a shrewd act, getting ahead of their fellow growers. Now, don't mistake us, we are not crying down new ideas, for we always have some to market ourselves, but we do believe that a *developed* thing, one that has been improved and improved again, each time doing its work better, stands a far more reasonable chance to be serviceable and right down practical than the "Johnny Jump Up" proposition. Think it over, and then tuck this under your hat, that the L. & B. Encased Self Oiling Gear is all that's best in fifty years of ventilating experience. There are undeniable reasons why you should buy it. Send for the just printed catalog, and then send your order.

**We make every part for a greenhouse
but the glass. We sell any part.**

Lord & Burnham Co., Greenhouse Designers and Manufacturers. New York Office, 1133 Broadway, Corner 26th Street. Branches: Boston, 819 Tremont B'd'g. Philadelphia, 1211 Filbert Street.

A GREENHOUSE filled with plants is most interesting as far as the plants are concerned.

but often rather taking the attention from the construction. We want you to see construction, and construction alone, for if the construction is right, the plants do their part. So believing that the strongest argument we have to offer for the U-Bar house, is not anything in comparison with what seeing one would be;

we are going to leave you this week right on the inside of this house and let you compare in your mind, its lightness, perfection and beauty with other kinds of houses. Then if you send for the catalog, it will show exactly how and why U-bar houses are built the way they are built. **Pierson U-Bar Company**, Designers and Builders *U-Bar Greenhouses*, Metropolitan Building, Fourth Avenue and Twenty-third Street, New York.

No. 7

CONVENTION NUMBER, 1907

The House that Helps

Has been at it for a lifetime, especially equipped from the purpose with men selected for their knowledge of the successful achievement based upon "delivered goods."

The Printing of Catalogues

Is our main business. We have the type, the cuts, the presses, the men and the "know-how" and very many of the great catalogue successes of the trade have been our product. The work we do has selling power as well as mechanical excellence and beauty. It costs a little more, perhaps, than the ordinary product, but is the cheapest to be had, judged by the final result of the sales it makes.

Photographs of Plants and Trees

Are notably with us, in our collection of over 10,000 horticultural negatives. We go everywhere to find the choicest things to photograph, and have the results ready, perfectly catalogued. These photographs are offered at uniform prices, and you can buy as many as you wish, regardless of whether we do your printing. Prints of any special things are cheerfully submitted for examination, upon "memorandum," and there is no necessity to purchase if you do not want to.

Mount Pleasant Press

Sell Your Stock

Selling Plans and Advertising

Are designed by men who know plants, shrubs, seeds and bulbs—and who have had years of successful experience in selling them. We know how to plan selling campaigns for the trade, how to write good copy, how to illustrate it; we know the publications that are worth while for a florist's advertising, and we can get the best rates that are made. Complete advertising agency equipment.

"Follow-Up" Literature

The trade is awakening to the fact that a catalogue, however good, doesn't answer the whole purpose of selling literature—that there must be appropriate "follow-up" stuff to make the catalogue yield full returns. We were pioneers in this field—having originated horticultural picture post-cards and other methods that have "made good." Our men have a good crop of new ideas for fall application.

**THE McFARLAND
PUBLICITY SERVICE**

Specialising in
Horticultural Advertising

HARRISBURG, PENNA.

COME TO HARRISBURG

It is only two hours from Philadelphia, on the main line of the Pennsylvania Railroad. All trains from Philadelphia—and then some more—stop at Harrisburg. We will welcome you with pleasure, and show you our model plant; you will not be under the slightest obligation to buy any of our products. Our Visitors' Book now holds the names of trade-leaders who regularly call on us, and enjoy it. Besides the Mount Pleasant Press, Harrisburg has some rather noted points of interest—that thirteen-million-dollar State Capitol, for instance. The city's municipal improvements attract visitors from all over the world.

Office and Salesrooms

A standard of
excellence is not of a day's
growth. The result of years of pains-
taking effort produce the *ribbons manufac-*
tured by

THE PINE TREE SILK MILLS COMPANY,

Not alone are these ribbons well woven, but the
lustre, the finish, the colors, are given such attention,
that the ribbons when ready for sale are almost in a
class of their own. And yet, these ribbons cost you no
more, possibly less than the usual sort, for you buy di-
rect from the mill, and *save all between profits*. In Phil-
adelphia are located the office, salesrooms and mill.

The office and salesrooms in the business portion,
and the mill in the famous mill district. A visit
will well repay Florists attending the Conven-
tion. We show now, both on our count-
ers and looms, all the new Fall
and Winter shades.

BOBBINK & ATKINS

Nurserymen and Florists

RUTHERFORD, N. J.

A WONDERFUL NEW NEPHROLEPIS

NEPHROLEPIS SUPERBISSIMA

WE shall exhibit at the Convention at Philadelphia some fine specimen plants of this new fern, which is a very unique and distinct novelty—as distinct from *Nephrolepis Piersoni* and *Piersoni elegantissima* as they were from *Bostoniensis*.

IT IS A COMPLETE BREAK. The fronds are very heavily imbricated, the pinnae overlapping, making the fronds very dense and compact. It differs from the other *Nephrolepis* not only in form, but in color also, being a richer and darker green—entirely different from the yellowish green of all the *Nephrolepis*.

The plant is very sturdy in its habit, the fronds never breaking down. While a photograph shows a similarity to its predecessors, it is **ABSOLUTELY DISTINCT**, not only in the formation of the fronds, but in its habit and general characteristics. It makes a much more dwarf and compact growth, the fronds being very dense, firm, and rigid, and having a great deal more substance, so **THAT IT WILL STAND MORE KNOCKING AROUND** than any other fern of this type.

This is a sterling novelty. Experts who have seen it consider it far and away the best fern ever sent out. It is a plant that needs to be seen to have its great value and sterling qualities appreciated. It really is not in the same class with the other varieties.

It will be disseminated by us in 1908. **ORDERS WILL BE BOOKED AT ONCE** and filled in rotation as booked.

F. R. PIERSON CO.

Tarrytown-on-Hudson, New York.

A GRAND FERN NOVELTY

Of all the sports of Nephrolepis, there are none to compare with

AMERPOHLII

the latest and best of them all. We are booking orders now for Sept. delivery.

Odontoglossum Harryanum

Odontoglossum Harryanum is very little known and, I believe, somewhat rare. It has just flowered in the collection here, and is considered by all who have seen it, to be a very striking species. The accompanying photograph conveys only a poor idea of the exquisite markings of the flowers. The sepals somewhat resemble *O. triumphans* but are more intensely blotched and dotted. The color is a light yellow blotched with brownish purple. The petals are yellow faintly lined near the bases with mauve, which toward the apices becomes heavy purple lines and blotches. The lip, the most striking part of the flower is divided into two nearly equal parts, the lower half pure white changing into pale yellow as the flowers become older; the upper or basal half is rich yellow in the centre, and on each side is lined with numerous delicate, interrupted lines which radiate to the outer margins. The flowers when fully expanded measure three inches from tip of upper sepal, to lower tip of the lip. The length of the spike is about twenty inches.

Flowering as it has in midsummer when few odontoglossums are able, in this climate, to mature flowers equal to those formed in spring, it may be that under more suitable conditions the flowers may be even larger and more numerous. *O. Harryanum* is by some authorities considered a variety of *O. tripudians* which it somewhat resembles but its appearance is far superior and I think distinct enough to make it a species. It is a native of Columbia and should be given the same treatment as *O. crispum* and other cool growing species.

Ginkgo biloba

I was very much interested in what Mr. Hans says in *HORTICULTURE* page 161, about the Ginkgo. This beautiful and useful Japanese tree is a great favorite with most people. I have been watching it as a street tree in Philadelphia for the past few years and it is certainly one of the very best for that purpose. It is not only free from the attacks of insects and diseases, but it does not lose a leaf until the first sharp frost in the autumn when all the leaves practically come down at once.

It is gratifying to know that there is a way to tell the staminate from the pistillate forms before planting, for the one which bears the fruits would be very disagreeable if used as a street tree—when the fruits were ripe and dropping.

There are some trees of the Ginkgo growing near to Horticultural Hall, Fairmount Park, that have interested me ever since I realized they were quite distinct in their manner of growth from any that I have seen elsewhere, excepting one that I saw on my way back from Fairmount Park on Saturday afternoon and that is to be seen in the gardens of the "zoo." They grow quite dense and pyramidal in form, as much so as the best Lombardy poplars I have ever seen.

Last autumn when in Central Laurel Hill Cemetery I saw a solitary tree of the Ginkgo of the spreading form beneath which were a large quantity of seeds. The smell of the pulp was very offensive. A few seeds were secured and on arriving at the greenhouses they were dropped into an empty three-inch flower pot and forgotten until this spring when I found some of the seeds had sprouted.

I now know, I believe, how to raise Ginkgos from seed, and it will be my ambition to raise some of the pyramidal variety to be found in Fairmount Park either by budding or grafting on the seedlings—positive knowledge thereof to be determined by experiment. The Ginkgo is classified by botanists as dioecious; now, if that tree which I took the fertile seed from is a solitary individual, whence came the pollen to make it fruitful? In some dioecious classes—the holly for instance—some of the trees are hermaphrodite: there may be some of the latter class among the Ginkgos, or there may be a male tree sufficiently near to the seed bearing one that I had not noticed which had had the desired effect! I must investigate further in this matter, if only for the benefit of science.

Neither Bailey nor Nicholson mention a pyramidal form. Three varieties—namely, *lacinata*, *pendula* and *variegata* only are on record. Neither have I found it offered in any catalog I have at hand. The tree I noticed in the gardens of the "zoo" must have been from the same lot as those to be found in Fairmount Park, because the zoo gardens are practically a part of the park and the late Chas. H. Miller had charge of the early plantings in both. Perhaps you, Mr. Editor, or some of your numerous readers may enlighten us on the pyramidal form of the Ginkgo. I hope so.

James Hutchinson

Edwin Lonsdale

Gypsophila paniculata and Its Double Form

Either for packing conveniences, economy in using, or some other reason, the "Babies' Breath" is seldom seen in its full beauty, the common fakirs, especially, pulling the spikes to pieces to make them "go" as far as possible.

Those not knowing the habits can hardly imagine the beauty of these gypsophilas if left standing year after year, (they can be left on one spot indefinitely) one plant often sending up spikes that together will measure 4 to 5 feet in diameter and 2 1-2 to 3 ft. high. The individual flowers are white and very small, but the great quantity of flower is what makes the plant so attractive and useful.

It is very hardy, and I know of no perennial that has a better habit, staying as it does in the exact spot where it is planted and never running underground. It is an ideal plant to mix in with other early-flowering perennials, whose foliage becomes yellow and unattractive, such as oriental poppies, bleeding hearts, etc.

Although the broken up spike can be used to advantage in many ways, it is for large vase work, with the natural spike cut to the ground, that the *Gypsophila paniculata* and its beautiful double form are most useful.

When planting, plant deeply, as the following season's crowns are frequently made on the stem of the year preceeding. The roots go down a great depth, which enables them to stand the driest of seasons, without in any way impairing their beauty. The description of the double form is in every way the same; the flowers are well formed, of good substance, and are about three times as large as the single, and with their extra quantity of petals, show a purer whiteness. The double has only one real commercial difference from its single parent, which is a very useful one. I refer to its blooming about ten days later, so that with the help of *G. repens*, *G. glauca*, and *G. acutifolia* we will have a continuance of Babies' Breath from spring till end of August.

For floral work of all kinds one should have both

Gypsophila paniculata and its double form. The accompanying cut is of a single spike.

Frederic J. Rea.

Seasonable Chrysanthemum Notes

SYRINGING

Now is the time of year to pay strict attention to syringing. See that the hose is held in such a position that the water gets at the under side of the leaves where the red spider is sure to be found if there are any around. If the chrysanthemum grower once gets his plants free from insects of this kind, he has no difficulty in keeping them so by syringing regularly.

SPRAYING

This is another matter that should not be neglected and which is very essential to the proper growth of the plants and if the hose is handled properly this can be done, without wetting the beds. In spraying the water should be played on the sides, roof and plants; this will reduce the temperature several degrees and it will remain so for some time. The plants are as much benefited by this treatment as any other, as it gives the house a good growing atmosphere and keeps the plants in such a condition that they move right along whereas, if spraying is neglected the plants take on a hard stunted growth and do not break away in the fashion they should.

TAKING THE BUDS

Strict attention should be given to this matter from now on as there are plenty of buds just right to take and if another growth is allowed to come it will bring them in too late for the exhibition table. Of course there are some of the earlier varieties on which the buds were taken one or two weeks ago, such as *Monrovia*, *Gustave Grunewald*, and a few others, and then again there are some kinds for very late use that do better on later buds, such as *Chadwick*, *Nonin*, etc., on which varieties the buds are usually taken in September.

INSECTS

Insects are as plentiful and as troublesome as ever this year. Any butterflies seen flying about the house should be caught and killed, as it is these that lay the eggs from which the caterpillars originate. The chrysanthemum grower should be on the lookout for the nests of eggs and destroy them before the little caterpillars are hatched out and have commenced their travels. Another insect that has been very troublesome in this vicinity this year is the cut worm; this pest does its work at night, crawling up the stem of the plants to the young soft growth and eats out the heart of the shoot, if not taken in time. If you will scrape the soil from around the base of the plants on which they have been at work you will be sure to find them in hiding waiting for the sun to set and to enjoy another feast unless they are taken by surprise and crushed under foot.

The chrysanthemums will take a good supply of water just now as the soil is filling up nicely with roots and the hot sun takes up a lot of moisture during the day, and again the water has a long distance to travel before it reaches the top of the plants.

Andrew McKendry

The Rockery

A rockery is not merely a collection of rocks planted on a mound and suggestive of a dog cemetery, but rather a question of providing a suitable home for rare, and otherwise, alpine and rock plants. It must be serviceable as well as ornamental. The most important feature is the construction of congenial homes suitable for the requirements of each species. Winding walks, mounds and dells can be formed and with the addition of a running stream, shallow ponds can be constructed and made suitable for bog and aquatic plants and yet present a natural appearance. Nothing affords greater scope for the exercise of taste and ingenuity than the designing and planting of a rockery. Though large rocks present a massive appearance small ones are preferable, as they can be handled with ease and can be taken up and replaced at will. As each individual pocket is made the soil in the pocket must be level, not sloping as is sometimes the case, so that each pocket will retain all the moisture that comes to it.

SOIL AND PLANTING

Alpines and rock plants are so varied in regard to soil that ordinary garden soil rarely suffices. A suitable mixture must be provided for them such as fibrous loam, peat, leaf soil and mortar rubbish; this will be found to suit most of the alpine plants.

When planting a rockery grouping will give much better effect than planting single plants at intervals and slow-growing plants must not on any account be planted with the more rapid-growing varieties or the result would be over-crowding. Often the most valuable alpine is destroyed in this way. When immediate effect is wanted the best method is to secure good sized plants from a reliable nurseryman, though the most interesting part of this pursuit is the raising of a collection from seed. Some of the species germinate quickly; others may be from six to twelve months, consequently there ought to be no hasty decision in turning out the pots in which the seed have been sown. A few agaves and cut-leaf maples plunged in the rockery in the summer months will add greatly to its beauty.

Collections suitable for various positions are so numerous that the writer will only give a few of the rare and choice ones. *Conodron ramondoides* is of recent introduction and is one of the best; the flowers are violet blue and the foliage much like *streptocarpus*. *Ramondia pyrenaica*, *R. p. alba*, *R. p. serbica*, *R. p. nathalis* are much prized among alpine lovers; they can be raised from seed and prefer partial shade. The best saxifrages for the rockery are "Fergusonii, *lutea viridis*, *aretoides*, *diapensoides*, *calyciflora* and *Ferdinandi Coburgi*; they all flower in early spring and prefer a sunny position and ought to have a place in every rockery.

Dianthus Warely is a charming rock plant raised in England by Miss Wilmot two years ago. The most suitable campanulas for the rockery are *C. alpina*, *C. G. F.*

Wilson, C. Rainieri, C. Allvini. Seed can easily be procured but seldom true to name, therefore the method is to secure plants from a reliable firm. *Myosotis rupicola*, *Petrocallis pyrenaica* and the hardy *Calceolaria platygenia*, are all rare and interesting rock plants. *Phlox amœna*, P. Nelsoni and P. G. F. Wilson are probably the best of the dwarf phloxes and when allowed to run over the rocks are more effective and more at home than when planted in the herbaceous border.

In order to keep the rockery supplied duplicates of all the most valuable sorts ought to be potted and plunged in cold frames, so that more attention can be given them in the way of watering and propagating. For planting at the margin of shallow ponds *Cypripedium spectabilis* is probably the best. *Orchis spectabilis*, *Caltha palustris* and many others help to make the hardy plant garden more attractive and interesting. *Nymphaea pygmæa*, N. P. *Helveola* are the most suitable water lilies for shallow ponds and convey an impression not imparted by any other class of plants.

David Miller

About Pentstemons

Seems to me that one of the most beautiful of all summer flowering plants is either not known, neglected or forgotten. I mean the *Pentstemon gentianoides* and its varieties. It does not cost as much to raise a pentstemon as it does to raise a geranium. It probably is not as glaringly effective as S. A. Nutt geranium, which is O. K.

The best kinds of Lemoine's latest pentstemons are to me as beautiful as gloxinias, embracing as many colors and without the fragility of the gloxinia. A good common name for these summer beauties would be shrubby gloxinias. It matters not where they are planted, whether in a bed by themselves or in a mixed border, they are equally effective and taking. As a cut flower for inside decoration at this season of the year the pentstemon has no equal.

John Thorpe

Acanthus longifolius

Although the Acanthus family has about sixteen hundred species of plants yet we can count only a few that are hardy in this climate. The reason for this scarcity is that most of them come from warm moist climates. We are more fortunate for greenhouse plants in this family. Strobilanthes, Justicia, Eranthemum, Mayenia, Jacobinia, Mackaya, Thunbergia, Aphelandra, and several others, are fine showy shrubs and climbers which give us a wealth of their beautiful flowers. Most of these plants will grow out of doors during our hot summer months, but in the fall we have to get them into our greenhouses for the rest of the year.

The genus Acanthus has about twenty species which are natives of Asia, Africa and Europe. There are about six species in cultivation in Europe and about half that number in this country.

Acanthus longifolius grows luxuriantly in our garden. At one time we thought this plant was not hardy and used to lift it each fall from the border and put it in a cold frame. About twelve years ago we had a number of plants and thought we would experiment with them. We left half of them all winter in the border. Just as the ground began to freeze we gave them a coating of dried leaves, to keep them from freezing and thawing alternately during the winter. To our great surprise every plant grew the following spring and they have been out of doors ever since that time with just the protection of a few leaves in winter.

This species flowers very freely here as may be seen from the photograph. The flowers are of a purplish color and although they are not as showy as some other perennials yet they possess a quaint charm when in flower which compensates for their peculiar color.

They are fine foliage plants and it is supposed that the leaves of Acanthus spinosus furnished the patterns for the decorations of the capitals of Corinthian columns. When the plants are in flower they attain a height of from three to four feet.

Acanthus mollis and its variety latifolius are hardy with slight protection of leaves or litter in winter, but they do not flower as freely as A. longifolius.

Other species that might be tried further south where the climatic conditions are more congenial are candelabrus, hirsutus, Schottii, spinosus and its variety spinosissimus.

They love to grow in a warm sunny position with plenty of light, and when given a deep, rich, light soil they grow vigorously and give an abundance of flowers. They do best when planted in the spring as they get well established before the winter. They are increased by division in the spring or from seed.

Robert Lamm

Roses Under Glass

SEASONABLE CULTURE

It is said that there is no greenhouse specialty which requires so much skill as the growing of roses and it is just at this particular season that we are inclined to believe this assertion. The excessive heat and the lavish use of water, call for unerring judgment on the part of the grower in order to keep the plants in a healthy growing condition and to avoid that rank, yellow, soft growth, at once so undesirable and unpleasant to the eye. Any neglect in cultivating, tying, disbudding, syringing or ventilating at this season will be certain to cause trouble, and however well we may treat the plants afterwards, the ground thus lost will be difficult to recover.

Constant cultivation is a wonderful incentive to vigorous growth, and should be practiced until the feeding roots begin to approach the surface of the soil, when further cultivation would be injurious. In soils which are deficient in calcareous matter—many rose soils are—an application of air-slaked lime, sprinkled on the soil previous to stirring, will help to strengthen the stem and give tone to the foliage. Ventilation will require to be carefully attended to, and especially at night, when, with sudden fluctuations in the temperature, any laxity in the proper administration of air may nullify all our work and efforts during the day.

As the season advances and the nights begin to cool, our heating apparatus should be thoroughly inspected and if need be, repaired, so that we can with safety apply heat on short notice and, as we may soon expect the outside temperature to fall below 60 degrees, when firing becomes a necessity, it is advisable to be fully prepared to meet just such emergencies.

TRAINING AND DISBUDDING

Sufficient attention should be given to training, so that the plants may be in good shape before the first crop matures. By allowing the young shoots to trail all over the bench, we are inviting the eyes to break weak, which is sure to encourage a luxuriant crop of blind wood, and blind wood unfortunately does not add to the revenue. Tying the shoots neatly to the supports produces symmetry, facilitates syringing, and it also allows free access of the sun's rays to the soil and insures a perfect circulation of air among the foliage.

The work of disbudding should be attended to regularly and carefully, and here is where the skill or knowledge of the grower is tested. There is really no set rule by which one may be guided in this operation. Most growers have their own particular ideas on the

subject and at best we can only select the eye that is likely to produce a good cane, thus securing good, robust wood, with eyes fit to develop future flowering stems.

INSECT PESTS

This is the season when we may look for trouble with caterpillars. One brand in particular dotes on roses and his voracity is quickly made apparent by the absence of foliage in his immediate vicinity. The name of this pest is *Cacacia parallela*, or "Rose leaf roller," so called from the manner in which it draws the edges of the leaves together in the form of a tent in which it lives. Owing to their habits these caterpillars are difficult to reach with insecticides. Handpicking, while a most disagreeable task, is perhaps the only effective remedy.

Mildew, another of our constant enemies, is ever awaiting an opportunity to get in its work, but usually well grown stock does not readily submit to the attentions of this pest.

A light fumigating with tobacco once a week—the weather permitting—will suffice to keep greenfly in check, but will not disturb thrips, and if this pest has gained access to the house it will be necessary to fumigate with hydrocyanic acid gas. This operation should be performed at night and the house securely fastened during treatment. The formula for the preparation of hydrocyanic acid gas was given in *Horticulture* issue of June 22; also a full description of the manner of application.

J. E. Simpson

Education For "Job"

In a recent issue of your New York contemporary "Job" calls me to task for saying that Linnaeus made this world more pleasant to live in. I doubt whether "Job" ever read the life of this wonderful man, for if he had he never would have made such ignorant statements. Never was the old saying, "A little knowledge is a dangerous thing," better illustrated than it is in this instance, and so are also the words of Goldsmith, "The loud laugh bespeaks the vacant mind." I suppose "Job" does not know that Linnaeus's father was a minister and that he wanted his son to follow in his footsteps. Linnaeus firmly objected to his father's wishes. I have no doubt if he had gone to the ministry as his father wished him to, that saintly "Job" and his followers would be ready to credit him with having done some good in this world.

Linnaeus was a great man. He had the courage to tell the truth and decide for himself what his life work should be. He saw and believed in the beauties of this world and came to the conclusion that man's unhappiness on earth is due to his ignorance of nature. A Golden City had no charm for him. Therefore, he staked his chances on this world and had to suffer much for it in his early years. If he had worn the broadcloth his bread and butter would have come to him with greater ease and comfort.

While "Job's" countrymen in Scotland were groping in the dark and preaching about the Bottomless Pit, Linnaeus was teaching and preaching to his people in Sweden about the beautiful things in nature.

Just think for a moment of the wide difference between Linnaeus's creed and what was practiced in Job's

country, and you can easily understand the influence of past generations and environment on men like "Job." He has inherited his narrowness and we have to suffer on that account. It is hard to get one of his make-up to believe in anything else but his own narrow creed, but I propose to try to convince this unfortunate man that there are others besides myself who think that Linnaeus made this world better to live in.

Quoting from the Linnaeus Memorial Address by Edward L. Greene, which was delivered at a joint meeting of the Washington Academy of Sciences, the Biological Society of Washington and the Botanical Society of Washington, at Hubbard Memorial Hall, on May 23, 1907, Professor Greene closes his address with this fine tribute to Linnaeus:

"But they who fully realize what he accomplished in so many different directions to the great and lasting advantage of our science, will be rather disposed to wish that an equal of Linnaeus might soon be born; and might think it well that the natal day of the matchless Swede should be held sacred not only once in each century, but a hundred times in every hundred years."

Dr. N. L. Britton, director of the New York Botanical Garden and president of the New York Academy of Sciences, had this to say of Linnaeus in his address at the dedication to Linnaeus of the Pelham Parkway Bridge over the Bronx River, on May 23, 1907:

"The recognition of the work of famous men is one of the happiest duties of mankind. It stimulates our endeavors and encourages us to make efforts which we would probably not make without their examples before us.

"Today we do homage to a distinguished man of science, and the unanimity with which the scientific societies and institutions of the city of New York join in this tribute is in itself evidence of the value which is placed upon his contribution to natural history.

"The contribution of science to the welfare, comfort and happiness of mankind have made present human life widely different from that of two hundred years ago, and this amelioration of our condition, and the more general diffusion of knowledge has been accompanied by a vast improvement in morality.

The ceremonies of today are worthy of the great naturalist whose birth they commemorate. Societies and institutions all over the world join with us in honoring him, and are represented here by delegates or have transmitted documents expressing their appreciation of his life and labors."

Dr. George Lincoln Goodale, professor of botany at Harvard University, had this to say of Linnaeus in an able article which appeared in the "Nation" of May 23, 1907:

"Linnaeus died in 1778, the last of the naturalists who have attempted to make themselves proficient in the knowledge of the three kingdoms. Since his time, specialization, demanded by the accumulation of materials, has become year by year more minute. There is a special fitness in honoring one who was able early to mark out lines in all directions which, no matter how far specialization may go, must continue to be the lines of progress. No one can safely ignore the rules laid down by the master: Describe with precision and in the fewest terms: To each natural object assign a simple unvarying name."

"Job" is no doubt well posted, as most of his countrymen are in Burns, Scott and the Shorter Catechism, but I am inclined to believe that "Job" in his very narrow acquaintance with general literature has never given proper reflection upon the old saying that "fools rush in where angels fear to tread."

HORTICULTURE greets its read-
 ers in a new dress, this week,
 specially made in honor of the
 City of Brotherly Love and the

brethren whose hospitality the Society of American
 Florists and Ornamental Horticulturists is about to
 enjoy. We stand on the threshold of a noteworthy oc-
 casion in the history of the national society. It is now
 twenty-one years since the society met in Philadelphia,
 although once in the meantime the convention has been
 held under the auspices of the florists of that city. It
 was a great meeting, unique in many respects. It is
 pleasant to realize that most of the men active in the
 affairs of the Florist Club of Philadelphia on that mem-
 orable occasion will be again on hand to extend to their
 visitors from all over the Union the right hand of fel-
 lowship, for the ranks in Philadelphia have not been
 depleted to the extent that they have in some other
 cities. We hope that the size of the attendance at this
 meeting will be proportioned to the size of the welcome
 that is in store. No one engaged in any horticultural
 pursuit can afford to absent himself. From a business
 standpoint the advantage accruing from attendance on
 such an occasion is very great. But the man who lives
 entirely for utility is, after all, only a plodder and the
 social and recreation spirit which prompts many to at-
 tend these delightful annual summer reunions of the
 craft is far from being the least of the considerations
 which combine to make conventions successful.

HORTICULTURE extends cordial
 greetings to the trade on this
 most auspicious occasion. The
 S. A. F. convention is, to quite a

large section of the business, the dividing line between
 summer depression and the resumption of activity for
 the new business season. Our advertising pages are a
 good illustration of the wide-awake and sanguine spirit
 that is stirring in anticipation of a fall trade which
 we have every reason to believe will excel any hitherto
 recorded. Next to attending the trade exhibition at
 Philadelphia a careful perusal of the advertisements in
 this paper will afford a comprehensive idea of what
 the best houses in the country have to offer. We hope
 and trust that our readers will do all their buying, as
 far as possible, from the establishments using HORTI-
 CULTURE as a medium of publicity. They can render
 no more practical service to the paper, and as the firms
 herein represented stand among the best in the world
 in every quality of business enterprise and integrity,
 they can do nothing better for their own interests than
 to deal with HORTICULTURE's advertisers. This is
 our third convention number and we know our many
 friends all over the country will be glad to note the
 excellent support it is receiving from advertising houses
 known to keep careful watch on results and whose steady
 patronage is the best sort of evidence that advertising
 in HORTICULTURE pays. There is, however, always
 room for more and we'll get them in course of time.

During the past weeks we have taken
 occasion to call frequent attention to the
 approaching convention and urged upon
 our readers the duty which they owe to
 themselves of participating in this most
 notable event of the horticultural year. We hope that

good results will be in evidence and that not only numerically but in enthusiasm and practical progressive work, the reward for all the unselfish effort of the Philadelphia hosts may be equal to or, if possible, exceed their most sanguine expectations. It is much to be regretted that the narrow-minded, self-deluded individual who sees no use in societies or conventions is by no means extinct. On such argument or persuasion is a waste of good breath or ink, as the case may be. For those who make the effort there is in store plenty of healthy inspiration, enlightenment, and all that goes to prepare and enthuse a man for a telling business policy in the coming season. The S. A. F. has been "a power in the land" and not a few of the many successful florists in different sections are frank to admit that to the Society and the conditions which it has brought about they are indebted for much of what they are enjoying in business prosperity. The history of the Society shows a remarkably consistent adherence to the general policy outlined at the time of its founding. Few organizations there are which in a period of equal length can boast a career so free from aberration or factional unrest as the S. A. F. Its time has been spent in pursuing the objects for which it was founded and it has been from the start a shining example of altruistic purpose and achievement.

Uncle Sam Misrepresented

From the Journal of Horticulture, London, we clip the following:

The United States of North America Department of Agriculture has had a plant collector in Northern China for over a year. The Department is very careful, as we learn, to exact a credit and debtor account for all expenses in connection with its collector's expedition. This makes the work still less enviable to the man concerned, whose duties, one would have thought, would be sufficiently exacting without having to "make ends meet" in such an undertaking as that of collecting strange plants in a strange land. However, the accounts are rendered somewhat in this fashion: Dr.—\$50, expenses to Harbin. Cr.—Obtained grafts of soft-shelled Walnut, which will be of the value of — dollars to the State in a few years. Uncle Sam has the plant-collecting fever at present, and it runs high; but he watches the dollars with great keenness.

Fully satisfied that our esteemed British contemporary was the victim of some misinformation we took occasion to call the attention of Dr. Galloway to this statement which seemed to us to be of sufficient importance to warrant this course. We have received the following reply:

U. S. DEPARTMENT OF AGRICULTURE,
Bureau of Plant Industry.

Dear Mr. Stewart:

The inclosed clipping which you sent me is returned with the statement that there is absolutely no foundation for the statements made in it. I inclose herewith copy of comment made by Mr. Fairchild, our Agricultural Explorer, which is self-explanatory.

Very truly yours,
B. T. GALLOWAY,
Chief of Bureau.

Office of Seed and Plant Introduction and Distribution.
Foreign Explorations.

Washington, D. C., August 2, 1907.

Dr. B. T. Galloway,
Chief B. P. I., Dept. of Agriculture.

Dear Dr. Galloway:

I cannot understand where the Journal of Horticulture got the idea that we were keeping a debit and credit account with Mr. Meyer. The idea is so preposterously ab-

surd that to any sensible man, I mean sensible American, it would be discredited on the face of it.

Yours very truly,
DAVID FAIRCHILD,
Agricultural Explorer in Charge of Foreign Explorations.

We hope our friends across the water will now revise their views concerning Uncle Sam's frugality. They "have another guess coming."

Lovers' Lane

Dedicated to John Westcott of Philadelphia, the vice-president of the S. A. F., and the eloquent exponent of the joys of amatory rambles in Lovers' Lane, Fairmount Park, Philadelphia.

Where birds in hedges blossomy
Their lyric notes repeat,
Till morning drips with melody
Mellifluously sweet;
Where bees from brimming buttercups
Ambrosial nectar drain;
Oh, ho! but let's go loitering;
Oh, hey for Lovers' Lane.

Where ways stretch cool and shadowy,
To lure the laggard feet;
And little winds leap laughingly
Down ranks of rippling wheat;
Where wild bloom pelts the butterflies
With gusts of rosy rain;
Oh, ho! but let's go loitering;
Oh, hey for Lovers' Lane.

Let's leave the clash and clamoring,
The dust and din and heat;
Let's quit the cramping sordidness
And struggle of the street;
For one full day of joyousness
Let's slip the gyves of pain;
Oh, ho! but let's go loitering;
Oh, hey for Lovers' Lane.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

**Twenty-Third
Annual
Convention**

**Philadelphia,
August 20-24,
1907.**

HORTICULTURAL HALL, PHILADELPHIA.

The sessions of the Convention will be held in Broad Street Theatre, opposite Horticultural Hall. The President's Reception will take place here also. The Trade Exhibition will be located in Horticultural Hall, occupying all available space in the building. These two buildings will give splendid accommodations for all departments of the Convention and, with the many hotels of the highest class, located in the immediate neighborhood, it may be truthfully said that the ideal conditions for business and comfort have been arranged with much wisdom and foresight by those gentlemen having the preliminary arrangements in charge. It will be observed that the plan this year provides for a five-days' Convention instead of four days as has been the custom of late years. The large amount of business of importance requiring the Society's deliberation, the anticipated magnitude of the exhibition, the many entertainments, the extensive program of the sporting enthusiasts and the favorable opportunity to visit the large plant growing establishments will, no doubt, fully occupy every minute at the disposal of the visitors and five days will be found all too short.

Opening Session.

The exercises at the opening session on Tuesday, August 20, 2 p. m., will begin with addresses by dignitaries of the State of Pennsylvania and the City of Philadelphia, His Honor Mayor Reyburn having accepted

the invitation to perform this service on behalf of the city. Col. W. W. Castle of Boston will speak for the Society in response to the addresses of welcome.

Regular business will then be taken up, beginning with the address of President Wm. J. Stewart, which will

be followed by the annual reports of Secretary P. J. Hauswirth, Treasurer H. B. Beatty and the State Vice-presidents. Standing committees will then make their reports and miscellaneous business, including communications to the Society will be presented. This session will probably last until about 5 p. m.

Judging Exhibits.

Immediately after the close of the opening session the Judges of fine same and prepare the Exhibits will examine their reports upon the novelties and new inventions in the trade exhibition. Exhibitors having anything on view under this classification must make regular entry thereof with the Secretary in advance, otherwise the Judges cannot pass upon them.

President's Reception.

This, the enjoyable annual "family party" of the Society will take place at 8 p. m. on Tuesday on the stage of the Broad Street Theatre. It will be under the auspices of the Florists' Club of Philadelphia and there will be music and refreshments. All members of the Society of American Florists with their ladies are invited.

Second Day, Wednesday, August 21.

This session (also the corresponding one on Thursday) is called for 9.30 a. m. sharp. The trip up the Delaware in the afternoon starts at 1 p. m., and the business of the Society being very heavy it will be imperative that the meeting be called to order promptly at 9.30,

WILLIAM J. STEWART, PRESIDENT.

and members are urgently requested to give their individual aid to this effort to get business finished up by 12.30 p. m., by being in their seats ready for action at the hour named in the notice.

The program for Wednesday forenoon includes the presentation of the reports of the Judges, the selection of the location for meeting of 1908 (the polls being open one hour) and the nomination of officers for the ensuing year. Members having any special interest in any of the above topics will do well to heed the warning as to promptness in opening up business at 9.30 a. m.

There will also be three papers read before the Society at this session, as follows:

Hardy Shrubs How to plant Them, by S. C. Moon, Morrisville, Pa.

Hardy Bulbous and Tuberos Rooted Perennials, by E. V. Hallock, Queens, N. Y.

Bedding Plants—Where and How to Use Them. Alois Frey, Lincoln Park, Chicago.

Trip up the Delaware.

On invitation of H. A. Dreer, Incorporated, the Society will board the Excursion Boat leaving Arch street wharf at 1 p. m. sharp, for a trip up the Delaware River to Riverton, N. J. Invitation cards for this excursion will be given out at the Secretary's office in connection with the signing of the Registry Book

JOHN WESTCOTT, VICE-PRESIDENT.

which all members should sign immediately on arrival in Philadelphia. Full particulars of this trip and other local hospitalities will be announced from the platform from time to time.

Shooting Tournament.

The team and individual Shooting Contest will take place at the Florists' Gun Club Grounds, Wisconsin, on Wednesday afternoon. A. B. Cartledge, 1514 Chestnut street, is in charge of this event.

On Wednesday evening at Broad Street Theatre an Illustrated Lecture will be given by J. Otto Thilow, the subject being "The Flora of Yellowstone Park and Puget Sound."

Following the Lecture the discussion of the President's Address will be taken up and in connection therewith special committee reports will be made.

Third Day, Thursday, August 22—Election Day.

The morning session on Thursday will be devoted to papers and discussion on educational topics, papers to be presented as follows: Horticultural Education in the

Common Schools, by E. V. Hallock, Queens, N. Y.

Horticultural Education in Agricultural Schools, by Theo. Wirth, Minneapolis, Minn.

Horticultural Education by Horticultural Societies and Clubs, including a review of the work of the Boston Landscape Class, by John K. M. L. Farquhar, Boston, Mass.

Balloting for election of officers will begin at 10 a. m. and continue during discussion of the above subjects, the polls being kept open one hour, and until all legal voters in line at that time shall have had an opportunity to cast their votes.

On Thursday afternoon the visiting ladies will be entertained at Willow Grove.

Thursday evening will be devoted to a discussion of miscellaneous topics, including the proposed National Flower Show, and to a series of "2-minute talks" by members on various subjects of general interest.

Fourth Day, Friday, August 23—Philadelphia Florists' Day.

The Society will be the guests of the Florists' Club of Philadelphia. Start will be made at 10 a. m. for Belmont Mansion, Fairmount Park. Full details will be announced from the platform at the regular sessions.

Bowling Tournament.

The Bowling Tournament will take

H. B. BEATTY, TREASURER.

P. J. HAISWIRTH, SECRETARY.

Horticultural Hall.

Academy of Music.

Bellevue-Stratford
Hotel.

City Hall.

North American
Building.

Hotel Walton.

Broad Street Theatre.

BROAD STREET, PHILADELPHIA, NORTH FROM SPRUCE.

place on Thursday, beginning at 1.30 p. m., the inter-city team match being rolled at the Terminal Alleys and the individual bowling and ladies' match have been provided for at other alleys of which due notice will be given.

The following remarkable list of prizes is offered for competition in the various classes:

Men's Team Prizes.

Kasting cup, Whilldin cup, Michell trophy, silver cup, 3rd prize. The Philadelphia cup, for teams making highest total score in three games (excluding Philadelphia) to belong to team winning it at this tournament; silver cup, to man making high individual game; silver cup, to man making high three games; silver cup, to man making greatest number of strikes; silver cup, to man making greatest number of spares. To each member of team making high total score, Gillette safety razor; to each member of team making second high score gold cuff buttons; to each member of team making third high score, gold and jade scarf pin. Individual championship medal, to be competed for by the man from each team who makes the highest total score for his team, in the three tournament games, to be bowled for at the close of the team contest.

Ladies' Team Prizes.

Open to teams of ladies, who must be wives or daughters of members of the S. A. F., five members to each team, to bowl under the name of the Florist Club of which their husband or father is a member. First prize silver cup; second prize silver cup. To each lady on winning

team, silver chain purse; to each lady on second team, silver belt buckle. To lady making highest total score in two games, silver cup; to lady making highest score in one game, silver cup.

Chairman S. A. F. Sports Committee.

DAVID RUST
Superintendent of Exhibition.

SOCIETY OF AMERICAN FLORISTS

YOU ARE INVITED to visit us during convention week, any day at your convenience.

ANDORRA presents a unique Nursery—six hundred acres of hilly land, containing over three hundred and fifty acres of **Ornamental Trees, Shrubs, Vines, and Perennials**. Our **Location** permits us to grow many varieties both in deciduous and evergreen trees and shrubs that cannot be grown to advantage North or South of this latitude, and thus adds to our extensive collection many desirable and decorative plants.

ANDORRA has been called **The Modern Landscape Nursery**. The lay-out of our land, with its hills, valleys and woodland, permits the planting of trees and shrubs in natural positions, thus affording planting suggestions at every turn.

ANDORRA is easily and quickly reached from the Convention (Horticultural) Hall by the Pennsylvania Railroad from Broad St. Station (at Broad and Market Sts.) to Chestnut Hill Station; then by trolley, which passes the depot, to the City Line. Our office is one block from the trolley terminus at the City Line.

REMEMBER, this is a personal invitation to **YOU**.

PREPARE FOR CHRISTMAS

Novelties always sell during the holidays. If you have not already grown them, try some Pink or Rose **SPECIOSUMS**. If potted in July will flower for Thanksgiving and Christmas. Always useful either for cut flowers or plants. Ask the leading florists in Pittsburgh, Cleveland, Detroit, Buffalo, or around New York City. Order today. Will ship any time. Cold storage *Lilium longiflorum*s take about two months to bloom from time of potting; *speciosum*s from five to six months, so that *longiflorum*s wanted for Thanksgiving and Christmas should be planted about Oct. 1, and *speciosum*s in July.

ALL CASES ARE REPACKED BEFORE SHIPMENT

A complete file of HORTICULTURE for the past year will be on hand and also a supply of free copies of this Special Convention Number. Give us a call.

Reception at H. Bayersdorfer & Co.'s.

On Thursday afternoon, August 22, from 12 to 4 o'clock, the roof of the new establishment of H. Bayersdorfer & Co. will be open for the reception and entertainment of the visiting florists who are invited to come and enjoy themselves.

BIRD'S EYE VIEW FROM LEMON HILL, FAIRMOUNT PARK

During Recess

*"Hang Sorrow; care will kill a cat
And therefore let's be merry."*

Detroit Florists' Club Picnic.

A party of nearly 200 Detroit florists took a day off last Friday and boarded the excursion steamer for the beautiful resort Bois Blanc. The idea of gathering together all those of the local craft, whose sole aim is to work among Flora's children for the benefit and higher elevation of mankind, like one great family, was well appreciated and still better carried out. A regular family reunion which also embraced such noble representatives as Harry Bunyard of New York, F. Boeringer of Bay City, and other guests.

Those eager to show their prowess at the national game did not waste much time at the lunch basket, but got an early start at the ball game, which was followed by many other athletic events. Mr. Knope acting as umpire between the East and West Side team kept such a sharp eye on the players that now he is nursing badly inflamed eyes. The laurels went to the East Side.

Other winners of prizes were:

Ladies' race—1st, Miss Fay; 2d, Miss Hutter.

Boys' race; under 16 years—1st, Rob. Damerow; 2d, Henry Greeman.

100 yard dash—1st, Louis Charvat; 2d, Andrew Ferguson, Jr.

Three-legged race—1st, Fred Miesel; 2d, H. Beard.

Fat man's race—1st, Fred Pautke; 2d, H. A. Bunyard.

Running jump—1st, Robt. Watson; 2d, Louis Watson.

Girls' race; under 10—1st, Marjorie Hedder; 2d, Mildred Hilcher.

Boys' race; under 10—1st, Chas. D. Burrell; 2d, Rob. Burrell.

Tug of war—H. Smith's team.

A. T. Boddington made a special donation of 2 boxes of cigars to the losing team. Frank Holznagel furnished the \$5.00 gold piece for the winning ball team. Mich. Cut Flower Co. donated three knives. The balance of prizes were purchased by the local club.

Between dancing or swimming and athletics, the shop was completely forgotten and still all went home wiser and better men.

Great credit for the success of the outing is due to the ever ready, unselfish solicitude of Wm. Brown, Fred. Beard and Robt. Rahaley.

FRANK DANZER.

PERSONAL.

Prof. C. S. Sargent has returned from his trip to England.

R. Turnbull of Montreal, Can., has taken a position with the Mt. Royal Cemetery Co.

C. L. Howe of Dover, N. H., reached Liverpool on August 4. He will spend a month in England and France seeking health.

Visitors in Boston: S. J. Reuter and Louis J. Reuter, Westerly, R. I.; Julius Roehrs, Jr., Rutherford, N. J.; U. G. Scollay, Brooklyn, N. Y.

THE DREER SEED STORE, PHILADELPHIA.

We give a view herewith of the interior of the Dreer seed store. The Dreer organization has a world-wide fame. Every department is presided over by an expert, of whom none got there by accident. A life time's experience, a keen, well-trained mind broadened by education at home and abroad, and the inherited experience of his forefathers enabled William F. Dreer to perfect this model organiza-

tion and put the right man in the right place.

While not so showy as the magnificent growing establishment at Riverton, which will be the Mecca of every visitor during convention week, the seed store and headquarters at 714 Chestnut street is well worth a visit. The heads of departments are as follows: Plants, J. D. Eisele; seeds, J. Otto Thilow, G. D. Clark and W. H. McKubbin; accounting, J. D. Tull.

HOUSE OF COCOS WEDDELLIANA.

Here is a picture of a subject very difficult to convey in a photograph. We have long wished to do so, but this is the first approach to a decent picture. However, it must be seen to

be appreciated, and all the convention visitors will have a chance of seeing it next Wednesday on the occasion of the visit to the Dreer establishment at Riverton, N. J.

HENRY A. DREER, Inc., 714 Chestnut St., Philadelphia, Pa.

Seed Trade

A rumor that Mr. John Lewis Childs had sold his property at Floral Park and would move to Northport, L. I., proves to be incorrect. Mr. Childs has sold part of his real estate but his general plant and the grounds immediately surrounding are still his property, and it can be said with authority that he does not even contemplate moving. His name is so thoroughly identified with Floral Park, that considered as a business proposition, it would undoubtedly prove a most unwise move. The name "Floral Park" is not only identified with the name of John Lewis Childs, but also with the plant and seed business, and Mr. Childs' removal would afford a fine opportunity for an enterprising man to start a rival business. But we may rest assured that this important point would not escape the notice of so sagacious a man as John Lewis Childs.

The past week has on the whole been favorable for most crops, although two or three nights were unreasonably bad, a warning that autumn is close at hand. Still the days were warm, and the only drawback now is lack of moisture. A good rain is greatly needed.

Recent quotations from California growers of onion seed confirm the opinion expressed in June, that reports of damage to the crop which were so alarming last spring, were greatly exaggerated. The writer saw letters from a responsible grower stating that the total California crop this year could not exceed 300,000 pounds, and another grower put his figures as low as 150,000 pounds. Now it is said the growers will deliver from 75 to 80 per cent. of yellows, 65 to 75 per cent. of reds, 50 to 60 per cent. of white Globe and white Portugal. It will be a long time before the general trade is again greatly alarmed by reports of short crops from California. Those enterprising gentlemen will need to produce proof next time.

Those seedmen who are heavy dealers in bulbs are very busy, but the trade otherwise have little to do, excepting to make such preparations for next season's business as their facilities permit. Reports generally agree that seed stocks were sold down pretty close last season, and even jobbers are many of them dependent on this year's crops on many items. Empty bins are the rule among retailers, and even with fair average crops, prices should rule firm and higher than usual. There is nothing on the seedman's horizon to cause anxiety excepting possibly too great a shortage in a few lines. A moderate shortage in contract deliveries is much better for the trade than full deliveries, a point which very few seedmen will fail to comprehend.

The crop report from Sluis & Groot, Enkhuizen (Holland) indicates that although last winter was not exceedingly severe in Holland the frequent and sudden changes of temperature wrought havoc among all biennial subjects and even those perennial plants which usually stand the winter

very well have suffered very much. Among those that suffered very heavily were cabbages, turnips, chervil, kohlrabi, parsley and rutabagas.

A very cold and rainy spring has made growing crops, generally speaking, three or four weeks behind. Especially for late ripening articles, such as beans, the crop prospects are far from being promising.

Flower seeds are reported as also very backward owing to the cool weather which prevailed until now. The consequence is that a great many sorts have only poorly developed, but this will not prevent an average crop if warm weather sets in very soon.

While Boston and, in fact, the greater part of New England has been suffering from lack of rain all summer, it is interesting to read that in Aroostook County, Maine, the great potato country, the rains throughout the summer have been frequent and heavy, and as a result the potato fields are soaked with moisture and the people are praying for dry weather to save the potato crop. Aroostook County's potato crop amounts to 15,000,000 to 18,000,000 bushels a year.

SEED ADULTERATION.

Extract from remarks of W. D. Ross, chairman of Committee on Experiment Stations, before the American Seed Trade Association.

This subject has been well covered by the special committee, but as several experiment stations are responsible for seed laws treating on this sub-

ject, and as others are considering the matter, I deem it advisable to make mention of this matter here, for it is well to be on our guard, for we shall surely have trouble in the near future if we allow our law makers to go on unmolested without being watched. Simply because wheat and tares will grow together in the same field is no sign that we should be accused of adulterating because both are found in our possession. The present system of obtaining samples is unjust and unbusinesslike, and should be changed; as samples are taken now the dealer has no protection whatever, and no opportunity is given him to prove his innocence. Samples of seed should be taken the same as fertilizer, and laws should be made for our protection just as much as for the protection of our customers, and no man has a right to even insinuate dishonesty without he is prepared to prove it. There is no doubt but what mistakes have been made in the past, and innocent dealers have suffered by the negligence of incompetent help, either through negligence or wilful reporting of samples. If individuals did their work as some officials have, they would have suits for large damages on their hands, but under the present law we must abide by their decision, whether it is just or not.

While the Experiment Stations are doing good work and increasing the demand for seed, it must be remembered that dealers are also doing a lot of good along this line, and we should both work together, and every dealer should encourage, as far as possible, the Experiment Station work.

JAMES VICK'S SONS, Rochester, N. Y.

REVIEW OF THE SWEET PEAS 1907.

We were unable to say much about the newer varieties of sweet peas last year (1906) on account of the extremely wet and otherwise unfavorable weather. This year (1907) has been much more favorable, and through the kindness of Howard M. Earl, of the Fordhook trial grounds (Messrs. W. Atlee Burpee & Co.), at Doylestown, Pa., who very hospitably entertained the writer and Mr. John Burton on the 11th ult., showing us over the farms and loading us with many courtesies, we are enabled to give some interesting notes:

Henry Eckford, as has already been noted, while a beautiful color is hard to get at its best, as the flowers burn so badly in the sun. To get the true color effect, shading must be resorted to. Ordinary cheese cloth or tiffany is quite satisfactory for this purpose. It is an intensely bright, shining flame colored self, of good size and attractive form.

Queen Alexandra produces a flower of very fair size, of excellent form, being widely expanded and graceful. It is far superior to Scarlet Gem but to some does not appear quite so captivating as King Edward VII., which is larger and bunches more gracefully. Queen Alexandra might be called a "fadeless Scarlet Gem." The color is very intense and it does not fade.

Sybil Eckford is not of a sufficiently strong color to appeal to one as some of the other varieties do. The effect is a rich apricot with a blush shading.

The foregoing were the three sensational importations of last year, and our impartial opinion of same, as will be noted, is rather conservative. We will now take up some of the other new varieties. Watkins & Simpson's list first:

E. J. Castle is a flower of the type of Gladys Unwin, a rosy carmine self similar to John Ingman, but several shades lighter. Mrs. Alfred Watkins does not seem to be fixed as to color as there are at least four different shades of pink. The flowers are quite similar in character to Gladys Unwin. Frank Delby is rather disappointing, the color being too undecided—a sort of rosy lilac lavender shade—neither one thing nor another. Nora Unwin is a pure white, almost identical in form with Gladys Unwin.

On the whole there does not seem to have been any decided advance in the foregoing list. We will now take a look at Eckford's new ones:

Agnes Eckford, soft rose standard with white wings suffused with rose. A thrifty grower, the stems invariably producing three flowers. Mrs. Collier is disappointing as the color is no deeper than that of Mrs. E. B. Kenyon but it is of a different form. This variety might be described as a cream or pale lemon Dorothy Eckford. It was introduced simultaneously by Eckford and Dobbie. Earl Cromer comes very true but unfortunately it burns badly under our hot sun. Standard a purple maroon; wings pale purple bordered with maroon. Large size, form slightly hooded and wings partly curled. Horace Wright is almost a self color; standard claret, wings light indigo. A fine variety for bunching where a dark shade is desired. Very different from Brilliant which is undoubtedly the best dark color in cultivation. Queen of Spain is a shell pink on a cream ground. It comes both in the hooded and the open form.

Some of the other new varieties worthy of mention are as follows:

Enchantress, a variety of recent introduction from England of the Countess Spencer type and together with Paradise (another Countess Spencer selection) is similar in shade to what is known here as "true" Countess Spencer. But—and here is an important "but"—both Enchantress and Paradise produce flowers of enormous size and good color, and either of them will become popular with florists for both inside and outside culture. White Countess Spencer; we were sorry not to have seen this variety (so called temporarily). It is described as a flower of enormous size, pure white, with the wavy effect of Countess Spencer intensified—to say nothing of the immense spread of the wings which thoroughly cover the keel. Helen Lewis is another of the Countess Spencer type. Standard crimson orange, wings orange rose. Bunches well and worthy a place among the elect.

We have omitted to mention a very pretty one introduced last year named Beacon, a very good one, the standard cherry red on cream ground, the wings cream occasionally suffused crimson; also last but not least, George Herbert, one of the largest of the Countess Spencer type—exceeded in size only by the "White Countess Spencer." Standard carmine rose, wings rose pink.

The foregoing notes should be read in connection with and in continuation of our articles of 1905 (issue of July 29th) and 1906 (issue of Aug. 11th).

THE S. S. PENNOCK-MEEHAN ESTABLISHMENT.

"The creation of a thousand forests is in one acorn," and the "big stores" of ten years hence are probably the "little shops" of today. But the little shops of today whose owners are not good advertisers will still be the little shops ten years from now.—Exchange.

RALPH E. FAUST
Treasurer S. S. Pennock-Meehan Co.

The mere mention of the names which go to make up the name of this company suggests the thought of sterling business integrity and conservative horticultural stability, for no two names are more closely linked with the best ideals in Philadelphia horticulture for the past half century than are these. The establishment of which exterior and interior views are given herewith is a good example of the possibilities in the wholesale florist business under wise progressive policies. The visitors in Philadelphia will find in its equipment much that is interesting and instructive.

We present also portraits of Samuel S. Pennock, the head of the company and Ralph E. Faust, treasurer. Mr. Pennock is also president of the Florists' Club of Philadelphia this year.

SAMUEL S. PENNOCK
President S. S. Pennock-Meehan Co.

RIBBON DEPARTMENT

NEW BEDFORD HORTICULTURAL SOCIETY.

At the monthly meeting of this society, held on August 12, it was decided to abandon the annual fall show this year, as it was felt that all available material was being used up in the interest of the Old Home Week exhibition, which the society will give free on August 27, 28 and 29.

Two short talks on the peony and herbaceous plants for cut flowers, by A. J. Jahn and James Garthley were followed by an interesting discussion. It was decided to hold the annual clambake on August 22. The schedules for the August show were placed in the hands of the members.

FLORISTS' CLUB OF WASHINGTON.

The August meeting of this club was held at Gude's Hall, on the evening of Aug. 6th. Being "gladiolus night," there were some very fine flowers shown. F. H. Kramer was the only local exhibitor; the other flowers being shipped by John Lewis Childs and Arthur Cowee.

It was decided to hold the chrysanthemum show on the 12th, 13th and 14th of November at either National Rifles Armory or Masonic Temple. Chairman Geo. Cooke presented a schedule to be deliberated upon by the club. The public has every reason to expect a fine show with such a chairman and his fine executive staff, viz. W. F. Gude, F. H. Kramer, Geo. Shaffer, and Geo. Field.

The S. A. F. of the P. M. CO.

SERVICE. Great stress is laid on the accurate filling of orders. Telegrams, phones, messages of all kinds written or verbal, receive the careful attention of competent heads of departments so that no one need feel any hesitation in forwarding hurry up orders. The organization and service are so complete that it is almost impossible for any hitch to occur.

The **PENNOCK-MEEHAN CO.** business combines all important qualifications: organization and equipment; service and knowledge; quantity and quality of stock; and offers itself confidently to the whole country both for the grower to market his products and the buyer to procure his supply of cut flowers, plants and florists' supplies of all kinds.

RIBBON AND SUPPLY DEPARTMENT. The business of this department has been increasing yearly and is now the best equipped of any wholesale florists in the country. New styles, new fabrics, new inventions are constantly being added to the staples so as to bring the stock thoroughly up to date in all respects.

ABILITY. The ability of the organization has been developed along practical lines through years of experience and has been brought by selection and elimination as near perfection as possible. Constant vigilance is the watchword in this department to the end that every employee may by fair but firm treatment show the best that he is capable of not only for his own sake but that of his employer and the public—the interests of all being in the long run identical.

The S. A. F. epitomizes the spirit of mutual co-operation which has made it possible for the florists' business to have reached its present high state of development.

The **PENNOCK-MEEHAN CO.**, with its modern organization for the distribution of the florists' products, epitomizes no less the same spirit—mutual co-operation being the guiding star that has kept the business on its steady upward progress from small beginnings to its present commanding position.

This spirit combined with a thorough knowledge of the customer and his wants, and a sympathetic willingness to help him out in emergencies, affects every detail of the business and accounts largely for its popularity and success.

FACILITIES. The company has the largest and most modernly equipped outfit of any wholesale florist's establishment in the world. The buildings are centrally located being within a stone's throw of Broad Street Station five blocks from Horticultural Hall where the convention will be held this year and having at its command an experience of over twenty years in knowing how to make the best of these facilities for the benefit of both growers and customers. A cordial invitation is extended to all visitors to make this their headquarters during their stay.

S. S. PENNOCK-MEEHAN CO.

The Wholesale Florists of Philadelphia

1608, 1610, 1612, 1614, 1618, 1620 LUDLOW STREET

THE NIESSEN ESTABLISHMENT.

VIEW OF STORE

OFFICE

In the modern growth of the flower trade there are few departments that have shown a more enterprising development in the past ten or fifteen years than the wholesale commission business. The views which we publish herewith of the new headquarters of the Leo Niessen Co., of Philadelphia, give a good idea of one of the best equipped establishments in this line in this country. We congratulate Messrs Niessen on their well earned advancement which has nothing magical about it, but is the result of long foresight, ploughing, sowing, and cultivating the field in an intelligent manner year after year until now the firm enjoys a widespread clientele of growers and customers. No one can say "luck" did it; only shrewdness, hard work and liberal advertising.

The store is 120 ft. deep and the dimensions of the cooling room are 12 x 32; height 14 ft.

COOLING ROOM

PHILADELPHIA NOTES.

On or about November 1st the McKissick business will be located at 1619-1621 Ranstead st., just back of the Pennock-Meehan establishment. The new store will be 51 by 30 first floor and basement and will give the needed facilities for a rapidly increasing business.

J. H. Jones has left the Sellers place at Edgemoor and is now located temporarily in Philadelphia.

The wire design firm of H. Rajsik has been re-organized, the title now being John Rajsik and Bro. Co., with headquarters at 619 North 4th Street. The younger element is now in the saddle and with the best wishes of their elders.

The convention bowling team of the Philadelphia Club will, we understand, be composed of the following: Yates, Polites, Roebertson, Connor, Dodds and Graham.

Nothing further has been heard in regard to the distressing affair of Edward Heacock reported in our last week's issue. Joseph Heacock left Philadelphia on the 9th inst. and was

expected to reach Gold River in British Columbia by the 14th. Very little hope is held out as to the safety of the missing man.

The U. S. Civil Service Commission, Washington, D. C., announces an examination on August 28 for the position of greenhouse gardener in the Bureau of Plant Industry, Department of Agriculture, Washington, D. C., at a salary of \$600. per annum. Only persons who are thoroughly experienced in handling plants under glass are eligible. Application Form 1093 should be asked for by those applying for the position.

Also on September 9 an examination for the position of assistant crop technologist, salaries ranging from \$1,500 to \$2,000, and of crop technologists, salary from \$2,000 to \$3,000. Application Form 304 and special form should be asked for in making application.

MORE WONDERS PROMISED.

It is announced by the publishers that Mr. Harwood will soon perpetrate a new edition of his wonder book about the works of Luther Burbank. It is mentioned as one of the prime attractions of the forthcoming edition that the author will cut entirely loose from the accomplished facts (some of us thought he had already done so) and tell authoritatively what "the Wizard" is going to do in the future. This ought to make good reading and it certainly will be easy writing—for Mr. Harwood especially. A man who finds such rich opportunities for the play of imagination in dealing with what has already come to pass ought to soar out of sight when he casts off the slight ballast of facts which he has hitherto carried. In this connection we may notice the pleasant reviews (inspired by the publishers) of Mr. Burbank's essays on the training of children. As Mr. Burbank is a bachelor he is peculiarly qualified to treat this theme, on which even President Roosevelt has not yet written a book. —Country Gentleman.

Among the many visits that you will make during the Convention Week in Philadelphia, do not fail to call on us. If you are a buyer and wish to secure a reliable source of supply, or if you are a grower and desire to find a good outlet for your stock, it will pay you to see us.

We have recently increased our facilities to such an extent that we need more business. Yours will not crowd us. We can take care of it with surprising results.

1209 Arch St., PHILADELPHIA.

ST. LOUIS FLORISTS VISIT SHAW'S GARDEN.

On last Thursday afternoon the members and their ladies were invited to hold their August meeting at Shaw's Garden, known as the Missouri Botanical Garden, of which the club's president, H. C. Irish, is superintendent. The big rain storm early in the day kept many away, still seventy-five including the ladies, braved the weather, which turned out fine later in the day. President Irish and Wm. Fulgraf of the Garden showed the members over the garden before the meeting opened, which was much enjoyed, the garden never having looked more attractive than at present.

The meeting took place at the end of one of the large greenhouses, which had been shaded for the occasion. Great interest was centred in the election of officers for the ensuing year. Chairman W. C. Smith made a report on the late picnic, on which \$103.80 had been expended.

W. C. Young, State vice-president, reported everything progressing nicely for the trip to Philadelphia and expects to fill the special car. Two applications were filed for membership.

The result of the election was as follows: William C. Young, president; George H. Augermuller, vice-president; A. J. Bentzen, secretary; Fred H. Weber, treasurer; Charles Schoeule, trustee for three years. Several ballots had to be taken on some of the candidates. A vote was also taken on the club's choice for the next State vice-president of the S. A. F. J. W. Dunford, W. C. Smith and C. J. Juengel were the candidates. After five ballots W. C. Smith was declared the choice of the meeting.

The club also recommended to the Garden Edwin Nyden of Kanosha, Wis., for a scholarship in place of Paul Roper who resigned. The treasurer's report showed a good balance to the club's credit. After the meeting the guests were invited to partake of refreshments, which were greatly enjoyed by the fair sex. After again making the rounds of the Garden, of which one never gets enough—especially a florist—the members departed for home, thanking Mr. Irish for his hospitality.

OFFICERS ELECT OF THE ST. LOUIS FLORIST CLUB.

Top Row—Charles Schoeule, William C. Smith and Carl Beyer, Trustees.
Bottom Row—Fred H. Weber, Treasurer; William C. Young, President;
George H. Augermuller, Vice-President; and A. J. Bentzen, Secretary.

GEORGIA STATE HORTICULTURAL SOCIETY.

The Georgia State Horticultural Society convened in Augusta on the 7th inst., with a good attendance. C. P. Pressley, on behalf of the Chamber of Commerce, welcomed the guests; Secretary Wight responded. The address of President P. J. Berckmans followed, and reviewed in a brief but exhaustive way the fruit interests of the state. Prof. J. N. Rogers urged the co-operation of the people to make the agricultural schools a success. After the sessions of Thursday a barbecue was enjoyed by the members.

The Florists' Club of Indianapolis (Ind.), was formed with twenty-six charter members, at the store of A. Wiegand & Sons, on the evening of August 7. Another meeting will be held on September 11 to perfect the organization.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTI- CULTURISTS.

Department of Plant Registration.

The Dingee & Conard Co., West Grove, Pa., submit for registration—Rose President Roosevelt; Safrano X American Beauty; color, bright, satiny pink; flower large, full and double, stiff-stemmed; height, 15 to 20 inches; fragrant; foliage good.

Prizes for Essays.

Samuel Murray, of Kansas City, Missouri, offers prizes of \$30 and \$20 for the following essay to be presented at the convention:

COMPARATIVE WORTH IN THE COM- MUNITY AND TO HORTICULTURE AND FLORICULTURE.

First: The man who is a gardener and florist, having a store and conservatory in the city, conducts a high class business, has greenhouses in the suburbs; grows plants and cut flowers for his store; has a good business in spring-bedding plants and does all in his power to increase the sale of hardy perennials, setting forth to his patrons on every occasion possible the beauty and charm of the hardy flower garden plants, shrubs and trees and bulbs in the fall.

Second: The man who conducts a store and conservatory in the city, has a high-class business, but does not have any greenhouses, buying all his plants and cut flowers at wholesale.

P. J. HAUSWIRTH, Sec.

A group of members of the St. Louis Florist Club and the ladies taken in front of the meeting hall at the Missouri Botanical Garden. Many more were present but left before the picture was taken.

The Florists' Hail Association of American, the American Carnation Society, the American Rose Society and several other organizations will hold sessions at Philadelphia during the Convention of the Society of American Florists. Due announcement will be made by their respective secretaries, from the platform.

FLOWER MARKET REPORTS

BOSTON The extreme heat of Sunday and Monday last had a very enervating effect on all cut flower stock. Much of it collapsed completely on the way to market and all had to be carefully handled and packed away to harden up after being received, otherwise it was useless. There are practically no carnations of the new crop and the few of the old crop being received are of very inferior quality. Asters are very abundant, so also are sweet peas which are coming in from every quarter of the compass. Sweet pears are of extra good quality. A few dahlias are in sight this week. Gladiolus Shakespeare is the finest thing offered in the gladiolus line; nothing else can touch it in price, although, as received in this market, it is worth much more than it brings.

The retailers all **INDIANAPOLIS** report business far better this past July than in previous years. Asters are coming in from all directions. The quality, as a rule, is only fair. Most of the growers have thrown out their carnations and blooms are hard to find. The supply of good Beauties is not large and excellent prices are being realized. There are large supplies of all kinds of lilies. The better grades of gladioli are selling well while the poorer grades are a total loss. Quantities of garden flowers are received but are not readily salable. Tomlinson Hall market trade is reported very quiet.

The supply of all material usually available in August is abundant—too much so for the present or any possible imminent demand. Quality runs rather low on most lines the recent scorching weather being in part responsible. Asters are now accumulating fast with values falling.

Dahlias have commenced to come in regularly. The man with a roll can buy the general run of all kinds of material in original lots at figures that are unquotable.

There is nothing **PHILADELPHIA** new to report as to the market situation. Midsummer dullness continues. Asters and gladioli are very plentiful. Poor aster stock more than usually abundant. There is also a very large supply of roses of poor quality. What few carnations come in are fair. Lily of the valley is good and finds ready takers. Other staples unchanged.

The dull season **WASHINGTON** still continues. The latter part of last week was a little more promising, but the improvement was only temporary. The greater part of the District of Columbia has been benefitted by fine rains.

BUSINESS CHANGES.

C. S. Fouse, of Aitch, Pa., has moved his greenhouse to Mt. Union, Pa.

Fred. O. Richards has purchased the greenhouse on the Davis estate, Gardner, Mass., and will continue the business.

The partnership existing between Messrs. Schroeder & Meyer, Chicago, has been dissolved, but both will continue in business independently.

J. L. Cooper has disposed of his interest in the Winfield Nursery Co., of Winfield, Kan., to J. Moncrief. The name will remain unchanged.

"The creation of a thousand forests is in one acorn," and the "big stores" of ten years hence are probably the "little shops" of today. But the little shops of today whose owners are not good advertisers will still be the little shops ten years from now.—Exchange.

OBITUARY.

George J. Reuter, born in Mainze, Germany, in 1830, died in Pittsfield, Mass., on August 3. Mr. Reuter came to Pittsfield in 1854 and has carried on

THE LATE GEORGE J. REUTER

the florist business until within a few years when he disposed of his greenhouses to R. Engelmann. He is survived by seven children.

Charles H. Wilson, who had conducted a florist's establishment at Gladwyne for 20 years and a stand on Market street, Philadelphia, for many years, died on August 5, aged 80. Three children survive him.

Thomas Campbell, for many years in charge of the Pomeroy estate, Pittsfield, Mass., died at his home in that place on August 9, at the age of 73. Three sons survive him.

Mrs. Julia S., wife of W. A. Herbert, of Wellsville, O., died on July 26, at the age of 56.

George F. Brehmer, of Chillicothe, O., passed away with heart disease.

GOOD FERTILIZERS.

Our readers' attention is called to
two new products which are now being
put on the market by the Pulverized
Manure Company of Chicago, called
Wizard Brand Pulverized and Wizard
Brand Shredded manure. The super-
iority of cattle manure fertilizer is re-
cognized by every one but its coarse-
ness, admixture of straw and dirt, un-
sightliness and odor have been serious
objections to its use in garden work.
The preparations above mentioned
have all moisture, hay and other
worthless rough stuff and refuse re-
moved and are as cleanly to handle
as grain perfectly dry and free from
odor. The pulverized form is a fine
granular material suitable for appli-
cation through a regular grain or fer-
tilizer drill. For lawn use it is es-
pecially efficient. The manufacturers
have an extensive plant for the reduc-
tion of manures in the Chicago stock
yards where over sixteen million ani-
mals are handled every year in the five
hundred acres of brick pens.

THE LANDSCAPE GARDENER AND HIS FIELD.

When Mr. Howard read his essay on "The Picturesque in Landscape Gardening" the writer was as interested a listener as perhaps any member of the Boston Gardeners' and Florists' Club.

When pressed in the debate to explain why it was that an artist did not paint a perfect landscape Mr. Howard's defence of the artist's view of the picturesque in imperfect objects was that such objects were more impressive, distinct, and more characteristic and for that reason more artistic. I believe it to be almost impossible for a man working in practice to pick out in a nursery those shrubs and trees which are superior in the above mentioned qualities, and it must be admitted by any practical gardener that these high-sounding definitions in practice do not and cannot mean anything to him. In my opinion Mr. Howard's arguments on and his definitions of the picturesque in a landscape are, to quote his own views on carpet bedding "baker's confectionery", not home-made goods, and "they cannot", to use his words again, "be taken seriously." The writer has read diligently through several books, essays, journals and pamphlets, both American and European, for the last ten months in order to assure himself as to what was really understood among landscape gardeners by "picturesque", yet in all the theories and definitions given I do not find that they have come to any definite understanding.

To what confusion oratory will lead, when used improperly—which is especially the case when you talk to a practical man about the theory of the object under discussion—will be understood, when we find Mr. Howard saying that he entertains opposite views from Downing about the beautiful and picturesque, and then borrowing from the same author the same example to illustrate to his hearers the meaning of picturesque, which Downing used 50 years ago for the same purpose.

Mr. Howard then proceeds to say, that we should study good painters and learn from them. Let me quote from much-read authors on this subject, in order to show, that Mr. Howard's argument that, whatever looks well in a picture would do so in a natural landscape, is not conclusive: Says Tuckermann (Gardens of the Renaissance): "At that time (the time of the renaissance in Italy) the landscape painters got their subjects for pictures in the gardens of the nobleman, although on the other hand, they again influenced landscape gardening, and at no time can the landscape gardener get along without the artist work of painting." Claude de Lorraine and Poussin got their motives of their historic pictures out of parks in and around Rome.

Mrs. Schuyler Van Rensselaer (Art out of doors) says the landscape painter creates his effects by colors, the sculptor by plastic forms, but the landscape gardener must necessarily work with both color and plastic form.

Downing said he could not detect any visible relation of landscape gardening to landscape painting, and other authors in landscape gardening do not mention the landscape painter at all. Mr. Howard's essay says: The

thing is to know your material (by name, or by having grown them and so having got familiar with them?) and then arrange and cast out and add, just as a painter does in composing a great canvas "The plant's object is firstly and mainly its own life." These are the words of another authority in landscape gardening and written to us to warn us away from any mechanical use of the plants in any way or form. But there is a fundamental difference between dead colors to be used at liberty on the point of a painter's brush and a living shrub or tree in the hands of a landscape gardener. In nature a plant's first object is its own life and not its relative value as a color in the landscape picture, and the landscape gardener cannot transfer his object in unlimited manner absolutely subject to his own wishes.

Let me narrate something of a recent trip to Newport. I spent some hours looking at the residences and gardens along the cliff-walk, and while there got an idea of what a landscape "set" in nature like streaks of paint in a picture would probably look like. A landscape gardener was "putting in" a new formal garden on a place not far from Vanderbilt's marble palace. He used considerable box hedges, conifers and rhododendrons, etc. Every bit of the hedge came from an outside nursery, just about as high and thick as it was ever intended to be; piece after piece, box, evergreen, rhododendrons, etc., like mason's walls or carpenter work was "put in", and there was your landscape. Yes, there it was, and there will be your landscape picture garden, but will it swing in the wind, bend in the rain, spread in the sunshine, in one word will or does it live? It does, it will not! because it gives only a "setting" to the house, and that's what it was "put in" there for.

Contrary to Mr. Howard I come to the conclusion that landscape picture gardening would lead up to that artificial French style of gardening which had so great an influence after the renaissance, and is manifested in the gardens of Versailles, with its carpet beds and stage-like "coulisse" scenery. In order to get pictures in the landscape trees and shrubs were at that period used like stage sceneries, one behind the other, to give settings to elaborate fountains, statues, etc., while the front part was made elegant by the famous carpet style flower bed. Of course, today, instead of statues and fountains there would be more natural objects, say a big rocky bank with a flowing stream or lake that is to get a "setting", but that would not make any material difference in regard to the effect of such landscape work in the foreground. In my opinion it is only the old French manner of "staging landscapes" in a new disguise.

Now what we practical gardeners want, if any, is such rules and suggestions about landscape gardening, as have become classical, for only when men have become absolute masters of an art or science, can they safely depart from established methods. Therefore, instead of trying to interest us in probable future fields in landscape gardening, where wild scenery and other values will be taken into con-

sideration, it is, I believe, much more to the point at present that we devote ourselves to established principles and modes of planting and grading. Let us learn what has been done in landscape gardening.

Not every practical gardener who is devoting his spare time and money to become more efficient in landscape gardening can become an Olmsted, and, for that reason, instead of speculating on the picturesque and beautiful in the practice of the future, let us stay among our familiar garden scenery and get light on questions like the following few:

Foliage versus flowers in shrubs and trees; that is, is the value of a tree or shrub to be judged by its comparatively short flower-crop or by its foliage and wood effect all the year around? For instance, is it or is it not bad taste to plant *Hydrangea paniculata* in a position where its "coarse appearance" (vide Parsons: How to improve the home-grounds) will be in evidence most of the time, while its nevertheless magnificent flowering beauty lasts only two months?

Banking versus plain, flat grouping: that is, should we plant an herbaceous border or flower bed with the small plants strictly in front and the taller ones in the back, with ground, middle and sky-line in regular succession from front to back, or shall we plant just as many high objects in front as in the middle or nearly as many, and have low ground lines running back behind higher front groups? Both are recommended by authors on landscape gardening. (Samuel Parsons, Jr., the American author, versus Charles H. Y. Smith, the old English author).

Massing colors versus mixing intermediate green with it; that is, shall we attempt to make effect with, for instance, a white and a red color as contrast directly or shall we have a green foliage space fill in and amongst the other two colors? In nature in very few instances we find no green.

We should learn something more definitely as to mixing varieties or massing one or two; whether it is bad taste to plant a tropical bed along Canadian hemlocks, and if so, why so; whether it is bad taste to plant a border of ornamental evergreens under the shade of a row of horse chestnuts, if there is not a ghost of chance that they may have grown so naturally (vide gardens in Newport's most fashionable parts), and if so, why so; or shall we "thin out" so as to enable us to look through and partly see the sky and other objects behind or shall we present a solid bulk of foliage massive, showing lightness and grace of outlines only, and if so why?

I believe such questions as these which come up in our work repeatedly would, when definitely and rightly answered and explained, help us more towards an understanding of landscape gardening as an art, than trying to operate with theories of unity, delicacy and whatever else we find proclaimed as qualities necessary to a beautiful landscape. That may lead us to understand these rules of art. We want first, classical knowledge of what has been done, and secondly, solutions of questions which lie intermediate between mere horticultural knowledge and strict rules of art.

Kill Your Scale

If you want to kill Scale on your plants Absolutely, there is only one preparation

WILSON'S PLANT OIL

Take a can of this preparation, dilute to four times its bulk with water, and wash or spray your palms, ferns, aspidistras, smilax or any plants subject to bugs or vermin and your plants will be clean. No alkali. Nothing deleterious. Dries at once.

READ WHAT OTHERS SAY OF IT:

Rutherford, N. J., June 28, 1906.
We have thoroughly tried your Plant Oil with very striking results. We may say this is the first insecticide we have tried on our palms that will remove the scale with the first application. We would like to say this is one of the few things that the florists cannot afford to be without, especially those who are growing palms and decorative plants. After one application of the Oil the plants take on an entirely new appearance. We would be pleased to have prospective buyers visit our nurseries and inspect the palms on which we have used your oil.
BOBBINK & ATKINS.

New York Botanical Garden, Bronx Park, New York City, September 5, 1906.
Mr. Andrew Wilson—Having used your insecticide here, I can testify to its efficiency in destroying scale and other insects infesting plants.
Yours very truly,
GEO. A. SKENE.

Florham Farms, Madison, N. J., December 8, 1906.
Mr. Andrew Wilson:—Dear Sir—Your Plant Oil is certainly the most effective scale killer I have ever tried. Please send another five gallons.
Yours truly,
A. HERRINGTON.

PRICES: $\frac{1}{2}$ pint cans, 25c; pints, 40c; quart, 75c; 2 quarts, \$1.25; gallon, \$2.00; five gallons, \$9.00. Cash with order.

THE FACTOR OF SNOW IN GREENHOUSE CONSTRUCTION.

A Snow Bound and Snow-free Comparison.

While spending a delightful Sunday afternoon with the editor of one of the largest country life magazines, our conversation drifted to green houses and the part they occupy in "the great awakening." "The awakening" is what he called the now universal opening of people's eyes to giving systematic attention to growing things; also the wonderful developments for surrounding themselves with the glass-grown beauties of Nature. He spoke of the large ranges of glass as far south as sunny Atlanta, and on the other hand the difficulties the snow-

completion an addition to an old style house. The addition was of the most modern construction, by a firm from "the States." When we reached there the new house had no heat in it, and the workmen were just getting the trenches in shape for the piping. That house, however, was absolutely free from snow or ice, and the sides were piled up with the snow that had continually slid from the roof. The older, heated house was on the left of the new one, and at right angles to the potting room. The gutter had held back the snow on this roof, and you

The Same Houses As They Looked in "the Good Old Summer Time."

bound Canadians have had in keeping their green house roofs free from snow and ice.

It was a fortunate coincidence that took me a few days later to Montreal. Sitting in the hotel one afternoon, with the mercury sagging down to 20 degrees below at noon, and three feet of snow on the level and more falling, it occurred to me to visit some of these Canadian green houses and get a line on the conditions spoken of by that editor. So I looked up a photographer and started out. The only green house I managed to reach that day was in a little town north of Montreal. The owner was just having brought to

can see from the photograph how the house was practically snowed under.

To better give an idea of how these houses stand, and to compare the construction of each, I have borrowed a couple of photos from the builder—one an exterior, shown herewith taken in the early summer when things had started up a bit outside; and the other an interior which at that time was filled with tomatoes, yielding an average of five quarts to a plant. To those of you, then, who have had United States snow and ice "troubles of your own," I would suggest the curved-eave house as a practical solution of the problem.

Bought Your Ventilating Apparatus Yet?

Then you are in luck, for now you can get such a machine as an up-to-date florist should have—an H & Co. Oil-Itself Gear. But don't put all the stress on the oil itself point, that simply makes your work a good sight easier. But if the construction and adjustment were not what they are, the little strength you now have to put on the hand wheel, would have to be many times increased. It is more than a mere ventilating apparatus, it is a powerful, built to last machine that stands up to any strain you will put upon it.

GREENHOUSE CONSTRUCTION LUMBER

John C. Moninger Co.

117 E. Blackhawk St., CHICAGO

THIS lean-to propagating house is a still further evidence of the care with which every

U-Bar detail is worked out. The bed with its

solid slate sides and tile bottoms is a thoroughly indestructible affair. The heating pipes are underneath, giving a perfect control to the bottom heat. The ventilating wheel is handy, but entirely out of the way. The roof line where it connects an adjoining house is clean cut in its every detail.

For further particulars of every U-Bar strong point, send for catalog. **Pierson U-Bar Company**, Designers and builders *U-Bar Greenhouses*, Metropolitan Building, Fourth Avenue and Twenty-third Street, New York.

The Best Thing You Ever Put in Your Greenhouse

PERFECT CIRCULATION IN ALL DEGREES OF WEATHER
ABSOLUTELY ASSURED BY THE USE OF OUR ELECTRIC CIRCULATOR

Rutherford, N. J., June 26, 1907.

Messrs. W. W. Castle Co., 170 Summer St., Boston, Mass.

Gentlemen:—Your inquiry regarding the Circulators received and in reply beg to say that the four Circulators now in operation have been more than satisfactory. We can give special commendation for the work you have rendered in connection with our old steam system, which heated at the time something like 30,000 square feet of glass.

Since changing this steam system to a hot-water system, it has not only taken care of the 30,000 square feet of glass to our entire satisfaction, but we have been able to add several more houses and sheds to the system without the least trouble.

The piping in this range was very defective, and after the slight changes which were made, the Circulator now takes care of it all, and we would not want to be without it for five minutes in cold weather.

You may book our order for another Circulator which is to go on the battery under the packing shed, of which we spoke to your Mr. Congdon upon his last visit.

Very truly yours,

(Signed)

JULIUS ROEHRS Co.

Clifton, N. J., June 25, 1907.

Wm. W. Castle Co., Boston, Mass.

Gentlemen:—After a season's use, would say that I can conscientiously say that the Circulator does all that you claimed it would do.

We are using a six-inch Circulator to care for 12,000 feet of two-inch pipe, and have it attached to the main return near the boiler. Running the system under gravity, we are able to get a temperature of 105 to 110 degrees in the main return, but within ten minutes after starting the Circulator we get 130 to 135 degrees, which I consider excellent work. I have not attempted to figure out the saving in fuel by using the Circulator, but it must be quite considerable; the boiler can do its work with far less forcing, and thus a smaller boiler and less piping would do the work than would be necessary under the gravity system. With our large houses 475 feet long, we could not possibly heat them satisfactorily without either the Electric Circulator or some other system of forced circulation.

Yours very truly,

(Signed) ROBERT SIMPSON.

THE ELECTRIC CIRCULATOR

My Dear Sir:—It is a pleasure to be able to report that during the past very severe winter we have used 73 tons of coal as against 99 tons consumed during the winter of 1904-1905. The saving, as you will see, is about 25 per cent during the most severe and protracted winter we have ever experienced. We compare with an average cold season that above named, and conclude that your Boiler and Circulator is a mighty good investment for any one who wishes to improve their heating system.

Yours very sincerely

(Signed) E. O. ORPET.

P. S.—I endorse all of the above.—E. V. R. THAYER.

So. Lancaster, Mass.

Dear Sir:—The Circulator installed for me last fall has given me entire satisfaction and works well. With the quick circulation received from its use there certainly is a saving of fuel, and if a person with a system not piped so as to get a good circulation was to try the Circulator before laying out too much expense on alteration of piping, I believe he would receive the benefit required. Cordially yours,

Needham, Mass.

(Signed) PAUL E. RICHWAGEN.

Gentlemen:—Yours, asking in regard to our experience with your Circulator which you installed for us last fall, is at hand. . . . We consider it a splendid thing for it gives the rapidity of a steam circulation on a hot-water system. . . . From a mechanical standpoint, it is perfect. Any one can operate it, and it certainly seems to us an invaluable adjunct to a water system. We should be glad to have any one call and inspect it at our Scarborough place, where it can be seen in operation, any time after we begin to fire in the fall.

Scarborough, N. Y.

Very truly yours,

(Signed) F. R. PIERSON Co.

Dear Sir:—Having had plenty of zero weather with wind all through the past winter, the Circulator has had a tyrant to cope with. I am pleased to say that it has proven convenient, economical and necessary. I cannot say too much for its efficiency, and you are at liberty to refer any one to me who is interested in securing a positive circulation for hot-water heating with the least expenditure for fuel.

Biddeford, Me.

(Signed) CHAS. S. STROUT.

Dear Sir:—It is a pleasure to recommend your Circulator for the very efficient work it does for me. I have two greenhouses each 200 feet long piped for steam with 1½-inch pipes, and can operate them perfectly with hot water by using the Circulator; in a very short time it brings the returns nearly as hot as the flows. As I have two of the Circulators in use under different conditions, I am well able to judge of the work they are capable of doing, and would not like to part with either of them.

Waverley, Mass.

Yours truly,

(Signed) WILLIAM W. EDGAR.

I believe the Circulator is O. K., and I know it would have been impossible for me to keep my large new house from freezing if it wasn't for the Circulator.

Defiance, O.

C. WINTERICH.

Dear Sir:—The Boiler and Circulator installed by you last Fall has given entire satisfaction. I have saved at least twelve tons of coal, and have given Mr. Congdon an order this day for one of the largest Boilers you make, to be put in at the Stone property on Nelson St., Leominster. It is the best Boiler I ever had.

Leominster, Mass.

Yours respectfully,

(Signed) J. J. FULLER.

The above are a few testimonials regarding the Circulator.

No boiler ever built for greenhouse heating can compare in good results with our
STEEL PLATE HOT-WATER BOILER

The Boiler and the Circulator in operation will be on exhibition at the
S. A. F. Convention at Philadelphia. Don't fail to see them.

W. W. CASTLE Heating Engineer **170 Summer St., Boston**

Sixty thousand feet of glass is a pretty good-sized layout for a commercial proposition; but when we come to think of such a range being devoted to cut-flowers on a private estate, then the broad field that the greenhouse and its products has reached begins to dawn on one.

Here is a splendid example of the possibilities and perfection of the L. & B. Sectional Iron House. The plan is an economical one, both from points of light, heating and working. The central connecting passage ways make each house readily accessible and carry the trench from the mains, giving an equal distribution of the coils on either side. The space between the houses is ample to prevent one house from shading the other. The placing of the houses in three groups

further adds to their handiness, while giving a pleasing architectural distinction to the whole scheme. The palm house is 40 feet wide by 133 feet 4 inches long, and so framed that no columns are necessary. The grapery, peach and nectarine houses are in the extreme left group. For perfection in growing condi-

tions, this range has proven a record-breaker. Superintendent Kleinheinz, with his skill and the advantage of these houses has to be reckoned with when it comes to a prize

competition of importance.

Advance leaves of our greenhouse catalog now ready. Send for them.

— A WONDERFUL NEW NEPHROLEPIS — **NEPHROLEPIS SUPERBISSIMA**

WE exhibited at the Convention at Philadelphia some fine specimen plants of this new fern, which is a very unique and distinct novelty—as distinct from *Nephrolepis Piersoni* and *Piersoni elegantissima* as they were from *Bostoniensis*.

IT IS A COMPLETE BREAK. The fronds are very heavily imbricated, the pinnae overlapping, making the fronds very dense and compact. It differs from the other *Nephrolepes* not only in form, but in color also, being a richer and darker green—entirely different from the yellowish green of all the *Nephrolepes*.

The plant is very sturdy in its habit, the fronds never breaking down. While a photograph shows a similarity to its predecessors, it is **ABSOLUTELY DISTINCT**, not only in the formation of the fronds, but in its habit and general characteristics. It makes a much more dwarf and compact growth, the fronds being very dense, firm, and rigid, and having a great deal more substance, so **THAT IT WILL STAND MORE KNOCKING AROUND** than any other fern of this type.

This is a sterling novelty. Experts who have seen it consider it far and away the best fern ever sent out. It is a plant that needs to be seen to have its great value and sterling qualities appreciated. It really is not in the same class with the other varieties.

It will be disseminated by us in 1908. **ORDERS WILL BE BOOKED AT ONCE** and filled in rotation as booked.

F. R. PIERSON CO.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

The Philadelphia Convention a Success in Every Department—A Very Large Attendance from all Sections

A Superb Trade Exhibition — Niagara Falls the Next Meeting Place

Officers Elected

PRESIDENT—F. H. Traendly, New York City.

VICE-PRESIDENT—George W. McClure, Buffalo, N. Y.

SECRETARY—P. J. Hauswirth, Chicago, Ill.

TREASURER—H. B. Beatty, Pittsburg, Pa.

The Broad Street Theatre presented a scene of brilliancy and animation such as the National Society has rarely seen, when at 2:45 p. m. on Tuesday, August 20, 1907, Vice-President John Westcott stepped forward on the stage and called the assembly to order. The stage was beautifully decorated with banks of plants and flowers. In the long row of present and past officials of the society seated on the platform there were included probably a larger representation of ex-presidents than ever graced a similar occasion, the list including ex-Presidents Craig, Hill, Smith, Lonsdale, Graham, Gude, O'Mara, Breitmeyer, Burton, Vaughan and Kasting, together with the members of the Executive Board and officers of the Florists' Club of Philadelphia.

Vice-President Westcott was very happy in his opening remarks, which elicited much applause and put the audience in excellent good humor for the exercises following.

He asserted that, while he himself might be known as "a sport," he appreciated the wisdom of subordinating recreation to business. He said that, although the society might be regarded as a trade organization for selfish purposes, it was in reality doing a great work for the best interests of mankind in improving home surroundings and making the world happier. He had begun his career as a gardener by rooting; he had continued to root; his advice to every one was to root, for rooting was as necessary in every-day life as in sports. He called upon President S. S. Pennock of the local club to read a letter from Governor Stuart expressing regret at inability to be present and open the meeting. He then presented His Honor, Mayor Reyburn of Philadelphia, who proceeded to extend a hearty welcome to the visitors on behalf of the city.

He said in part:

"What Mr. Westcott has said re-

minds me that I am a sport. I believe a sport is a man who gets much out of nature in all her forms. I love the sea and the blue skies and the flowers, and I believe that that is the best kind of a sport to be. I want to say that I heartily favor the work of your society. You bring out the beauties of nature and furnish them to the people. You are not inspired by selfish motives, but you work in the interests of humanity. Philadelphia is sometimes called a plain city, but we have many noble things here, and I know that the

pressive oratory kept his audience literally spell-bound as he told of the great hospitable heart of the City of Brotherly Love which had, on so many impressive occasions, been opened to welcome the stranger. He recalled how Philadelphia had welcomed and cared for the beardless boy advancing to war and returning wounded or victorious in 1860-65. He said Boston was the Hub but the Hub had to agree that Philadelphia was the Axle. He continued, but I realize how difficult it is for a lay member to attempt to voice the sentiment of an organization such as this. The Society of American Florists is not confined to a few localities; it extends all over this nation. It has representatives here from the coasts of New England, from the Savannas, from the land of the mocking bird, from the mountains and valleys of the Middle West, from where the Great Divide cuts across the continent, from across the Slope and clear down to the golden sands of the Occident. It has its aim and object, and no one can say they are not the very best. We have met here at the urgent request of your florists, and I can simply say, Mr. Mayor, in response to your courteous and eloquent words of welcome, we thank you.

COL. W. W. CASTLE

Who responded to the address of welcome.

citizens are seconding me in extending to you a cordial welcome."

After the applause had quieted down Mr. Westcott introduced W. W. Castle of Boston, who stepped forward and with words of cordial appreciation presented the Mayor with a magnificent cluster of roses and lily of the valley on behalf of the National Society and then proceeded to voice the sentiments of the Society in response to the words of kindly, hospitable welcome which had just been listened to. With eloquent expression and well-turned phrase this past-master of im-

President Wm. J. Stewart was then presented by the vice-president and was accorded a most enthusiastic reception, with long-continued applause. The president then proceeded to read his annual address which was closely listened to by an audience which fairly filled the theatre. It was as follows:

PRESIDENT'S ADDRESS.

Fellow Members and Guests:—The occasion which we inaugurate so auspiciously today is a notable event in the life of the organization whose passing years these annual conventions mark. Contemplating the horticultural advancement in this country since the founding of the Society

of American Florists we can feel justly proud that in all the high achievements which adorn and signalize this period as one of unprecedented progress in the science and practice of horticulture this society has had an honorable participation. From the start its roll-book has borne the signatures of the leading spirits in the craft to whose uplifting it has been pledged, and in whatever community it has presented itself it has invariably been accorded a welcome and high place in the public esteem.

Standing here in this fair city where horticulture has ever been honored and beloved, where from the day of its birth this society has been steadfastly championed—a community, the home of not a few illustrious exponents of our art in the days gone by, a community which can boast horticulturists, florists, plant growers, seed establishments and nurseries second to none in the world today, a people wide-awake and enterprising, yet warm-hearted and companionable—here, in this City of Brotherly Love, as we voice our gratitude to the pioneers and extend our hand to the coming generation, we may well stop and take a survey of our field, note conditions as we find them, lay plans and invoke continued success for our society and all that it represents.

The Mission of the Horticulturist.

To clothe the earth with loveliness, to cooperate with Nature in her most beautiful functions, to instill into the affections of the people an appreciation of our art and a zeal for his products and to serve them and gratify this desire is the mission of the horticulturist. The materials in which he deals were once classed among the luxuries of life, but the world is fast coming to recognize them as necessities of healthful and rational living and, as this sentiment grows, so also will grow the importance and influence of the horticulturist in the public eye.

The Mission of the Society.

To aid the horticulturist through the influence and power of concentration, by the gathering together, moulding and assimilating of the concrete wisdom of the many, and to bring the profession to a lively sense of their duties and privileges and a better realization of what is possible through the medium of a well-supported central organization is the task of this society. Its aim and its purpose have ever been to stimulate emulation, to broaden the channels of business, to promote the fraternal spirit, to help the gardener and florist in making for himself an honored position in the commonwealth and to inspire the profession with a more correct understanding and better appreciation of the nobility of their calling which, as Downing tells us, "is intrinsically the parent and superior of them all," because agriculture is the basis of all wealth and horticulture is the refined essence of agriculture.

The Field and its Cultivation.

Agreeably to custom it becomes my duty to ask your attention at this time to such suggestions and advice as seem to me sound and wise and conducive to the growth and continued efficiency of this society. First let us take a look at the situation. We find

a vast country possessing the widest range of climate, topography and soil, affording homes for ever-multiplying millions of people ambitious, enterprising and prosperous and now reaching that stage where the finer sentiments begin to develop and the desire for beautiful home environment commences to kindle.

To the extent that the gardener and florist grasp the situation and act upon the opportunity thus presented depends much of the future welfare of our horticultural industries and of gardening art. One thing is indisputable; if the horticulturist is to do his part in directing and developing the garden-hunger of the people he must first make good use of every means to fit himself to do this intelligently. These are times of unprecedented rush and enterprise. Timorousness and parsimony have little part in the policies that lead to success now-a-days, and he who would excel must follow modern methods, taking full advantage of the horticultural literature of the day and of personal in-

HARRY BUNYARD
Sergeant-at-Arms.

timacy with his fellows in the societies and clubs; he must travel, visit exhibitions,—in short, he must use every avenue of publicity and every opportunity to sharpen his wits and enlarge his knowledge. The day when a paying business can be done with untidy grounds, neglected store windows, decrepit greenhouses, badly grown plants, misrepresented trees and shrubs, and haphazard financial methods has gone forever.

Garden-hunger and the Horticulturists' Opportunity.

Modern suburban transportation facilities have given a tremendous impetus to the rural home idea. It is to the man skilled in horticulture that the home-maker will turn for advice, assistance and material needed and for those who grasp the opportunity in the right spirit there will be found abundant scope and full recompense for cultural knowledge and artistic talent. Nothing comparable to the present demand for hardy garden material has ever been experienced in

this country, and no horticultural enterprise intelligently and diligently conducted can fail of success if existing conditions are understood and provided for. Tender material, also, will get its full share of the prosperity if used with better discretion as to its adaptations and limitations. For the ambitious, earnest young man, blessed with an artistic temperament, no department of horticulture offers brighter emolument or higher honor than that of outdoor gardening in all its branches. Within the scope of our vision today the field seems practically unlimited and the young generation may safely go into training for large responsibilities—every one will be needed. Under pressure of exigencies prevailing in the past the gardener has in too many instances been acquiring a one-sided experience and some of our most talented indoor growers find themselves badly handicapped through deficient education in the fundamental operations of general gardening. The horticulturist who makes his mark in the future will not have these limitations, but will combine a thorough equipment for outdoor planting, grading, management and executive ability, with a fine knowledge of indoor operations and proficiency in the production of flowers and fruits under glass that will stand the test of comparison with the products of the specialist. Several of the agricultural colleges are doing good work on this order and turning out trained young men from whom we may expect much.

Room for Improvement.

Too many greenhouses are devoted to crops for which neither the houses nor their owners are competent. We see acres of nursery space filled with antiquated stock; well-grown flowers sacrificed through careless handling or through inefficiency in the sales department; the once-prosperous flower-shipping business prostrated by short-sighted methods; the trade subjected to criticism because of the trumpeting of undeserving novelties. Our exhibitions are crude in method, faulty in manner of making awards or interesting the public. In every branch of activity there is room for better system. The arrangement of flowers, the planting of garden beds or the larger operations of beautifying an estate or creating a landscape picture, in many of which as we see them from day to day the qualities of originality and artistic intelligence in form and color harmony are conspicuously lacking show conclusively the need for study and self-education in artistic taste before we are properly fitted to instruct the public. It is the province of the florists' club to seek out and apply the remedy for all these deficiencies and it becomes the duty of the craftsman in justice to himself and his fellows to uphold in every possible way his local organization and do his share towards the general advancement which is sure to follow the fraternizing of congenial spirits whose material interests are identical.

Support the Societies.

No better evidence of progressiveness in a given locality or in any special branch of our industries can be adduced than a full representation

on the society roll books and at the regular meetings, yet how pitifully small in the aggregate is the proportion of the horticultural craft represented in the membership of all our local or national bodies. The power of organization when all stand behind it, for whatever is just and right, the tremendous advantage in being able to command unity of sentiment and action when any evil menaces, is a lesson that is being learned with exasperating slowness.

Forest Protection.

While on the subject of societies it may not be amiss to call attention to the efforts that are being made for the protection of what is left of our forests—a heritage of greater intrinsic value to the health and prosperity of our country than all the gold mines on the continent. Devastation by soil erosion, floods and droughts, bird extermination, insect plagues, and many other evils are following in the wake of the wanton forest destruction which has been going on. Few interests are more seriously affected by

the conservatories and conservatory plants, or the small fruits and products of the kitchen garden which every home lover likes to indulge in, once the appetite of the people for such things has been thoroughly aroused. Large as the demand already is, numerous and prosperous as we know the craft to be, yet who can say that our country is not well able to furnish business sufficient for many times the present number of our commercial establishments and employment for good gardeners in far greater numbers than they can be supplied today? With these facts in view I know of nothing which promises so rich a return as the school garden movement. In addition to its services in the cause of good citizenship it must be obvious to all that activity on this line is also good business policy and assures the interest of the coming generation in parks and gardens, tree-lined highways, horticultural exhibitions and plants and flowers everywhere.

Educating by Example.

Again, every florist's home should

field in a few of its many phases the question comes as to what part this society should assume conformably to its avowed aims and through what channels best results can be reached. It is the business of an organization such as this to help men to help themselves and then to conserve and safeguard the results of their work so that those who come after them shall have as their heritage the sum total of the efforts of their predecessors.

Our Relations with Other Organizations.

It has been my conviction for a long time that there is nothing more to be desired to place this organization in a position of greatest usefulness than some system of direct affiliation with existing or prospective special and local organizations. Far from regarding these societies as a possible menace I look upon their multiplication as distinctly to our advantage. The field is practically limitless and we can well afford to nourish any and all well-meant efforts to build up horticulture in any of its branches. There is an

all this than is horticulture and every movement, local, state or national, for forest preservation, should have our zealous support individually and collectively.

Educating the Public; the School Garden Movement.

Chief among the instrumentalities for the upbuilding of our industries is the education of the public to a fuller appreciation of our products. The majority of American homes fall short of the home ideal in their lack of any setting of living green. Consider the possibilities—the millions of house plants, the hundreds of thousands of porch and window boxes for both summer and winter, the innumerable little table ferneries, the tons of lawn and flower seeds, the cargoes of spring and summer bulbs, the garden implements, the vast quantities of evergreens and shrubbery and border and bedding plants for which a demand can be created, not to mention

be a shining object lesson. Show neighbors and passers-by the possibilities with spring bulbs, with easily-grown plants in bed and border, in piazza box and window; excite their dormant perceptions with rose and clematis and honeysuckle-bowered porch and pillar; impress them with the dignifying effect of ornamental trees and shrubbery, the cheery picture of evergreens in winter time. See that they are wisely instructed in the selection, planting and care of material and that they realize that the time is probably not far distant when bare yards and flowerless windows will pass as an evidence of ignorance and squalor within. The public are in the mood to welcome such activity on the part of the florist, the newspapers are at all times disposed to assist, and the more the florist does in this direction the higher position he will occupy in the esteem of his townsmen.

How the Society Can Help.

Having thus hastily scanned our

infinity of specialized detail and local work which the smaller and more compact bodies can care for with an efficiency far beyond the reach of a society constituted as this is. Let them do it if they will and wherever and whenever the time comes that they find their burden heavy and the road rough let us put our big shoulder to the wheel and help them. On the other hand there are movements where a successful consummation is only possible under the capacious mantle of a large national organization. Events of the past year have indicated to us how at any moment we may be called upon to champion the cause of some branch of the trade where strength of numbers and national incorporation become elements of great strength and where the existence of a powerful representative body serves as a restraint and defence against corporate plunder. I believe we should keep working on this problem of closer relations until some feasible plan of permanent affiliation and intelligent

cooperation has been evolved and a system of specialized work established through these auxiliary bodies.

Plant Registration.

A well-regulated system of plant nomenclature is needed. It would be an element of great stability if all registration of varietal names could be recorded in one universally recognized bureau. Whether this should be done direct by the owner or first pass the scrutiny of a specialized society, where such exists, is of little consequence provided it finally comes into the custody of a central authority having the power to follow up infringement and extend the fullest protection within the law to the originator or owner. This central authority, I believe, should be the Society of American Florists and Ornamental Horticulturists.

Two Important Duties of the Society.

The time seems now ripe for us to insist that horticulture be made a regular course in our public school system. There can be no question of the wisdom of this society's taking an advanced position on this matter and fostering liberally all movements for the dissemination of garden knowledge through this means. Every argument on physical, mental and moral grounds is on our side.

As a society we should lend aid and encouragement to any investigation or experimentation for the purpose of stimulating the production of any horticultural material for which we have hitherto been obliged to depend upon foreign sources of supply. "Made in America" is an inscription too seldom seen on horticultural goods. How can this organization best assist to that end? In the case of those goods which we must import, there is room for a better system and improved facilities in the appraisers' department, and I hope our legislative committee will give this question the attention it should have.

Parcels Post Needed.

The project of a parcels post is a reform worthy of our hearty support. A cheaper and more reliable means of distribution for packages of limited size and weight, such as is enjoyed in most European countries, would greatly benefit the plant and bulb trade and provide the means for supplying the public at small cost with plants of a size that might be seen without the aid of a microscope and might be nurtured into lusty specimens without the use of an incubator. Were it not for the express companies a parcels post would have been a reality long ago—so we are told. The express companies and the S. A. F. have been making one another's acquaintance of late and find they don't think alike on some things.

State Vice-Presidents; Out-door Exhibitions.

I am satisfied that the present system of selecting State vice-presidents to represent this society sectionally might be improved upon and would suggest that you consider the adoption of some system whereby, in those localities where any organization exists, we might through mutual arrangement confer upon the presiding officer the

honor of representing the S. A. F. in his territory during his term of office.

It is much to be regretted that the Executive Board found conditions so unpropitious for an outdoor exhibition of planted material in connection with this convention that the project had to be abandoned. It was hoped by many that the humble beginning made in Dayton might be followed up and that in time an outdoor exhibit might be made a regular feature of our conventions, but in a large city the difficulties seem almost insurmountable. Wherever circumstances permit I believe it will be good policy to provide at least for a planting of such novelties as cannot be properly presented in an indoor exhibition.

National Flower Show.

As the National Flower Show project will be reported on at the proper time by the very competent committee of fifty under the chairmanship of my predecessor I will not take your time now with any reference to it other than to submit that it would be a grave mistake to make any change from the time-honored date for holding our annual convention. If it is thought wise to have a meeting at Chicago at the time of the exhibition let it be a special meeting called as provided for in the by-laws. The proposition to merely meet formally in August so as to comply with the constitutional requirements and then adjourn over until the time set for the flower show would, I firmly believe, very seriously affect the prosperity of the society.

The Society's Good Record.

The birth of the Society of American Florists was the outcome of a conviction on the part of its promoters that the horticultural interests of America were ready to get together for mutual advantage and the uplifting of their art. The young society found the commercial florist, as a rule, isolated and provincial because of the lack of opportunity for any but the most limited intercourse and interchange of opinion and experience. Not one society, club or periodical devoted primarily to the interests of floriculture existed on this continent. The best test of the wisdom of the founding of any institution is what it has been able to accomplish. Do you not think that the seed sown 23 years ago has borne pretty good fruit? The yield might have been increased many fold had every one in the profession who needed just this help taken advantage of it; still it is not too much to say that the S. A. F. has been the underlying force which has in this brief period placed American floriculture on an eminence where it commands the respect of the world and that the splendid confidence of its founders in the future magnitude of their profession has been well justified. The spirit of progress which prompted them to break the shackles of past isolation and secretiveness and throw wide open the doors for a general intellectual and material advancement is still our best asset. We must allow free scope to the mighty reserve forces of American horticulture and be constantly on the alert to see and act upon every opening for strengthening our hold upon the heart-strings of the profession.

The Winning Combination.

Unselfish, hard-working loyalty to the organization and its principles, on the part of every member, is the winning combination in all club and society affairs and this I would especially plead for at this time, as we near the close of my official labors. My dearest ambition during these many years has been to contribute with all my heart toward making this society the great leader in every work tending to the ennobling and enriching of our profession. I know, by intimate contact with those associated with me in the society's service, how faithfully they have done their duty and how unselfishly the members generally have responded when called upon for any assistance. These are the qualities that make for success in any organization and I earnestly hope they will be continued and strengthened in the years to come.

What Conventions Are Good for.

The society is to be congratulated on the magnificent attendance at this meeting. Conventions are always an incentive and encouragement. They give zest to work, feed the intellect, enrich our literature. They are a unifying force, establishing and cementing friendships and bringing into advantageous contact those who, although widely separated, are actuated by a common purpose in life. I pity the man who sees nothing to interest him here and finds no inspiration in such gatherings, no strength to help him surmount the daily recurring difficulties which are our common lot, no advantage in the opportunity to inspect this great industrial exhibition. Little he realizes how great is his loss.

Business First, Pleasure Afterwards.

And now let us proceed to business. We have diversions innumerable, entertainment after entertainment awaiting our pleasure; the bowlers and their henchmen are eager to pounce upon that tempting aggregation of honor and silverware, but with all their vociferation they are among the best promoters in the society's service; the ladies, indispensable always, have organized a little side auxiliary of their own; a magnificent exhibition across the way justly claims much of our attention. But with all these allurements let us not forget that the eye of the world is upon us and that important business awaits our attention first.

Upon the conclusion of the applause which followed the reading of the address, President Stewart assumed the chair and the regular order of business was taken up, the first being the annual report of Secretary P. J. Hauswirth, which was as follows:

SECRETARY'S REPORT.

Mr. President and Members of the Society of American Florists and Ornamental Horticulturists:

As your Secretary I submit this, my first annual report for your consideration.

Transfer of Office.—By instructions of the Executive Committee I proceeded to Boston the first week in January to have the property of the Society transferred to me by my predecessor. It was to be expected that a vast amount of material had accumulated in the number of years that the position of Secretary was held by our

President, William J. Stewart, and the Committee instructed me to destroy all documents that were of no value to the Society.

Transportation.—Considerable difficulty was encountered this year to procure reduced rates from the various Passenger Associations on account of the enactment of a two-cent rate in a number of States. This was especially true in the territory governed by the Western and Central Passenger Associations, and they refused to grant us the usual concession. The rate of a fare and a third was granted by the following Associations:

Trunk Line Association, New England Passenger Association, South Eastern Passenger Association, Eastern Canadian Association,

The Central Passenger Association granted us Card Orders that empowered their agents to sell through round trip tickets to Philadelphia at the rate of two cents a mile each way in the territory controlled by them and the rate of one and one-third fare in the territory controlled by the Associations that granted us the latter rate. This concession enabled a member to procure a round trip ticket that would only have to be validated at the ticket office when he was ready to return—within the time limit of his ticket.

The Western Passenger Association would not grant any concession but referred us to the one way tourist rates in effect in their territory to St. Louis and Chicago, and advised our members to buy to those points and then use Card Orders. In addition to the above, the cheap rates from all points to the Jamestown Exposition, and the Merchants' rate to New York, with very liberal stopover, were in effect.

Badge Book.—The Executive Committee at Philadelphia instructed me to continue the Badge Book, providing same could be supplied to the members at an expense not to exceed seventy-five dollars. I could not procure same at that price and therefore did not issue the book.

Membership.—The membership statistics as they appear on the books to January 1, 1907, are as follows: Total number of life members, 124; total number of annual members, 696; total \$10. Accredited to the following States:

	Life.	Annual
Alabama		8
California		5
Colorado		8
Connecticut		14
Delaware		1
District of Columbia	7	16
Florida		4
Georgia	1	10
Illinois		81
Indiana	2	27
Iowa		10
Kansas	1	4
Kentucky	3	8
Louisiana		9
Maine		1
Maryland	2	22
Massachusetts	19	43
Michigan	9	30
Minnesota	3	9
Mississippi		1
Missouri	8	29
Nebraska		2
New Hampshire		4
New Jersey	8	20
New York	122	102
North Carolina	2	5
Ohio	8	1
Oregon		1
Pennsylvania		96
Rhode Island	17	8
South Carolina		1
South Dakota		1
Tennessee		1

Texas	1	1
Virginia		5
West Virginia		4
Washington	1	
Wisconsin	1	16
Canada		7
Holland	1	
	124	696

The question of how to retain our membership after getting their names enrolled is one that needs attention. In looking over the records of past years I find that a great number have allowed themselves to be dropped from membership that ought to be numbered on our list. The various Vice-Presidents can accomplish considerable in retaining these names and I am pleased to note that a number of them have made efforts in that direction.

Members Lost by Death.—Since the last report we have lost five members by death, three being life and two annual members: Lewis Ullrich, Tiffin, O., October 29, 1906; J. L. Dillon, Bloomsburg, Pa., October 20, 1906; Jas. Braik, Buffalo, N. Y., January 16, 1907; J. F. Kretschmar, Flatbush, N. Y., June 8, 1907; Samuel Henshaw, W. New Brighton, N. Y., July 23, 1907.

Since last report the following new plant names have been registered:

September 29, 1906—Cannas, Sunburst, Topeka, by Central Park Nursery, Topeka, Kan.

October 27, 1906—Rose, Rosa Rugosa magnifica, by Dingee & Conard Co., West Grove, Pa.

October 27, 1906—Cannas, Meteor, New York, by Dingee & Conard Co., West Grove, Pa.

October 27, 1906—Laelio-Cattleya, Washington A. Roebing, 2nd, by C. G. Roebing, Trenton, N. J.

November 24, 1906—Carnation, Toreador, by H. Weber & Sons Co., Oakland, Md.

November 24, 1906—Chrysanthemum, Weber's Chadwick, by H. Weber & Sons Co., Oakland, Md.

September 22, 1906—Canna Magnificent, by Central Park Nursery Co., Topeka, Kas.

February 6, 1907—Chrysanthemum, Golden Dome, by John A. Macrae, Providence, R. I.

February 28, 1907—Sweet Peas, Le Marquis, Mrs. George Lewis, Mrs. A. Zvolanek, Mrs. Charles H. Totty, by A. C. Zvolanek, Bound Brook, N. J.

March 18, 1907—Rose White Killarney, by Waban Rose Conservatories, Natick, Mass.

August 10, 1907—Rambler Rose, Newport Fairy, by Julius Roehrs Co., Rutherford, N. J.

August 17, 1907—Rose, President Roosevelt, by Dingee & Conard Co., West Grove, Pa.

In closing, I desire to state that having assumed the office of secretary after January 1st, several of the subjects covered were during the term of my predecessor.

TREASURER'S REPORT.

The annual report of Treasurer H. B. Beatty was next read by that gentleman. The life membership fund showed an increase during the year of \$556.24, making the total on deposit \$4,287.76. The general fund showed receipts for the year amounting to \$3,300.79 and disbursements, including an account for printing proceedings of 1905 which had been held over from

the previous year, of \$3,503.76, making the balance on hand January 1, 1907, \$3,279.99, which with the life membership fund makes the total cash in treasury amount to \$7,567.75.

Following the acceptance of the treasurer's report came the report of the legislative committee by Benjamin Hammond, chairman, detailing the correspondence with various congressmen and others on the question of the tariff on glass which had been assigned for this committee's attention at the Dayton Convention last year. The presentation of this report was the signal for a lively and interesting debate on the engrossing topics of protective duties, trusts and politics which lasted for nearly an hour, and on vote the Legislative Committee was continued for another year with the addition of Messrs. E. G. Hill and Patrick O'Mara to its membership. A large number of the state vice-presidents' reports were received and were referred to a committee composed of R. Vincent, Jr., Geo. A. Kuhl and John G. Esler for perusal and report later on. The president appointed Chas. H. Vick, of Rochester, N. Y.; F. E. Palmer of Brookline, Mass., and Adolphus Gude, of Washington, D. C., to serve as judges of the Exhibition.

THE PRESIDENT'S RECEPTION.

This pleasant social affair was highly successful. From 8 to 9 P. M., in the lobby of the Broad Street Theatre the president shook hands with a thousand members and their ladies. With President Stewart, in the receiving line, were Vice-President and Mrs. Westcott, J. D. Carmody, Secretary and Mrs. Hauswirth, Mrs. W. K. Harris, Mr. and Mrs. Robert Craig, Treasurer and Mrs. Beatty, Mr. and Mrs. W. F. Kasting. The receiving stand was a perfect bower of palms and flowers. After passing through the guests filed into the theatre which was finally filled to overflowing and for an hour and a half enjoyed an excellent vaudeville entertainment, followed by refreshments. Over the stage was a brilliant electric display in colors, bearing the words Welcome—1907—S. A. F. and O. H. The arrangements were under the management of the special reception committee of the Florists' Club of Philadelphia, headed by Robert Craig, and it was one of the most enjoyable affairs in the whole history of the Society.

WEDNESDAY'S SESSION.

Wednesday morning's session opened half an hour late, but business went at a rapid pace after it got started. The first thing was the reading of Mr. Frey's paper on bedding plants, where and how to use them, by Wilfred Wheeler, its author being unable to attend.

Bedding Plants, Where and How to Use Them.

Riding through parks, along boulevards and country roads, speeding in trains through villages and towns, all over the country, passing the magnificent palaces of the wealthy with their beautiful lawns and the humble cottages of the poor surrounded by modest yards, everywhere the eyes meet the brightness of flowers and richly colored plants, which at once impresses upon

us the popularity and universal love for bedding plants.

There is such a large variety of these plants from the smallest annual up, like portulaca, to the stately subtropical plants, and also the perennials must not be forgotten, for they figure greatly in various effective displays. Then we have tulips, hyacinths, daffodils, etc. for early spring flowering. No garden need be without flowers from the time the dainty little crocuses peep out of the snow until late in the fall. No matter how small the purse, enough seed can be purchased to obtain a very harmonious and artistic effect, as well as a continuous season of flowers. It is not the means of being able to procure a large amount of choice plants, but it is the good taste and skill of the designer, who understands how to make an arrangement to harmoniously and discriminately combine the various colors with immediate surroundings, no matter how inexpensive, that appeals to the lover of nature with all its art and beauty, and this is what we are striving for more and more every day.

The average florist who deals in bedding plants, should by all means, give this particular subject thorough study, in order to be able to assist and educate his customers, who in most cases appreciate such advice and instruction in regard to arranging and planting their gardens so as to present a beautiful picture. It requires just as much artistic judgment and ability to accomplish this, as the painting of a picture on canvas. The designer must show individuality and know exactly what proportion the plants will attain, how soon they will be fully developed, also how the colors will blend together, in fact, he must see the finished picture before him when he designs his plans. The sooner we commence to understand how to arrange these beautiful gifts of nature better, the sooner we make a large majority of the people of our grand nation happier. We have everything to do it with, now let us understand how to do it.

To cover the subject best I have divided it into two chapters, as the title of this article indicates; "where to use them and how to use them."

The proper selection of the place for the floral display is first to be considered. A place where it will be properly effective is just as important as the execution of the planting, as this takes a definite part in the entire scheme. Locality, building and size of grounds must be taken into consideration, the smaller the place, the simpler should be the display; it is so easy to overcrowd a small front lawn whereby the proper effect is entirely lost. Large places in proportion will have more elaborate plantings, and the artist will have occasion to plan special features, such as courtyards, parterres, sunken gardens, Italian gardens, etc.

The front of a building is most always selected for the display, which is generally formal, and, if the space is limited, a narrow border of plants adjoining the building will be sufficient, with perhaps one or two beds on the lawn, proportional to the latter. There should always be plenty of green grass to offset the beds. The

backyard as a rule is very much neglected and in many instances unsightly; here I would advocate to have a grass plot with a border plantation. How much more cheerful one would feel, looking into a well kept yard than at a lot of rubbish. Places of larger dimensions with their beautiful landscape effects must be treated more in detail. Here we have an opportunity to lay out in connection with residences, conservatories and public buildings, courtyards, parterres, rose gardens, etc., which as a general rule are part of the architectural scheme and in harmony with the style of the building. In the last few years Italian gardens have again become quite popular, and these especially set apart from the rest of the landscape, must be treated by themselves. They are very set and usually contain considerable color well blended together.

Besides these forms of special treatment already mentioned we also have other gardens, which give an opportunity for a larger variety of flowering plants, in the line of annuals, roses, perennials, etc., which properly arranged make a brilliant effect without interfering with the more subdued and restful landscape. Public parks especially are a great field for floral displays and, although some authorities on landscape gardening do not favor them, I believe the public fully appreciate flowers; though the utmost care must be taken not to let them run wild all over the park, but keep them in the vicinity of buildings or entirely away and screened off from the quiet landscape. Boulevards also and small squares can be most admirably brightened with the ornamentation of flower beds.

Last year at the convention in Dayton, Ohio, all our members had the rare opportunity of seeing how the surroundings of a factory can be laid out in a most praiseworthy manner. Here our bedding plants brighten daily the minds of thousands of people.

How many people are not fortunate enough to possess a home with a lawn and flower beds. There is no necessity to deprive themselves of nature's gifts, but they can enjoy them in a more modest way, by keeping flower boxes, which, no matter how obscure and unassuming the dwelling, give it a homelike air and enliven the aspect of many an otherwise somber home. On the other hand, many beautiful residences rely solely upon piazza boxes for their floral display, and exquisite results can be obtained in this manner.

Finally a few words should be devoted to the homes of our loved dead. There is nothing more soothing to the grief-stricken heart than the sight of well kept cemeteries, bedded with appropriate flowers, speaking the language of peace and rest.

There are many and varied ways that the bedding plants lend themselves to; there still remains another problem to solve, namely, "How to use them." Here skill in artistic arrangement and harmony of colors is put to a severe test.

Starting with the beginning of the season, the various Dutch bulbs are the first ones to attract our attention. They are easily cultivated, and therefore most appropriate for the amateur.

Exquisite effects and color schemes can be carried out, although their duration of bloom barely reaches more than four weeks. I think they make the most striking display of the season. Only the purest and clearest colors should be selected. Off colors and the peculiar magenta shades are hard to match with pure colors and are best planted by themselves or far enough distant so as not to detract from them. Mixed beds containing a number of varieties look very well, but beds of all one color show by far better taste. Where a number of beds are planned greater attention must be given to work out a harmonious color scheme. Pink, white and light blue blend admirably together; next comes yellow, then red and yellow and the various reds. It is a great deal more pleasing to the eye to let the colors run into each other by degrees than to create too big a contrast. Colonies of crocuses, snowdrops and scillas, singly and several together, irregularly scattered on the lawn, look very charming.

Pansies, bellis and myosotis are also extensively used. As the pansies come in a multitude of colors, they are mostly used mixed and often with *Bellis perennis* as a border. Little advantage has been taken of working out color schemes with pansies, and yet, if we stop to study their rich tints, tints which I think cannot be found in any other plant, the possibilities are wonderful.

Following these come the summer plantings, with cannas, geraniums, heliotropes, begonias, petunias, coleus, acahyphas, abutilons, salvias, verbenas and a great number of other plants too numerous to be mentioned.

Most all bedding plants thrive and flourish best in full sunlight, except tuberous begonias and fuchsias, which do best in half shade, where there is plenty of indirect light; other plants like some of our hardy palms, phoenixes, latanias, chamærops, the various fibrous rooted begonias, like *Semperflorens*, *Vernon*, *Schmitti* and fancy leaved caladiuns do well under both conditions.

The soil for cannas, musas, ricinus and caladium esculentum, should be very rich, their growth will be so much more luxuriant, while the rest of the plants like geraniums, begonias, verbenas, salvias, cupheas, ageratums, etc., also need enriched soil; care must be taken not to use too much fertilizer, this will result disastrously; the plants will show an abundance of foliage in place of flowers.

Bedding plants before set out in their summer quarters should be properly hardened off; they should be exposed freely to the air and sunlight at least two weeks before the planting season commences. Nothing serves this purpose better than the hot-bed, no matter how much some of the growers are opposed to this sort of cultivation. It is true the cost of labor is somewhat higher, but the superior results obtained fully justify the expenditure made, and plants hardened off in this manner suffer but very little in transplanting. We have plants of every desirable height, from two inches up to eight feet, some with a wealth of flowers, others again with richly colored foliage, some with coarser, others with more graceful features.

In the arrangement of plantings, one great object, which is one of the great principles in landscape gardening, is in many cases lost sight of, namely, the consideration of the skyline. Especially in large border plantations this should be applied. Here we have tall plantings broken with lower ones, until they finally run out to very low plants at the edge. In fact, in every bed, as well as in larger displays, the relation of one bed to the other should be treated this way. While the beds are all more or less formal, they should not appear stiff. Every plant should have plenty of room for full development, and where a number of varieties are used in one bed, the tall ones should not be massed all together, but here and there one should rise above the lower ones, so as to present a loose and pleasing arrangement, and in this manner every plant will show its valuable points more advantageously. For example, a bed planted only with *Ficus elastica* would look very stiff, but intermingled with the graceful *Grevillea robusta* and a border of ivy, it would lose this stiffness and present a very pleasing effect. This shows that by careful study, we can improve the bad points of one plant with the good ones of another.

Particular stress should be given to the selection of the various tints, blending richly colored foliage tastefully with the more gorgeous tinted flowers, so as not to create too big a contrast. Beds of solid colors, alternating with some of less contrast will harmoniously tie the entire display together and this will help greatly to achieve the desired plan. It is in the designer's power to present a very brilliant or also a very quiet picture according to the scheme that is required. Quiet and restful effects are worked out by using tints of various blues, whites and gray, variegated glaucous and bronze foliage with a little touch of red and *Anthericum vitatum* var. *Punica*, *Granatum*, *pumila*, *Abella rupestris*, *heliotrope*, *Plumbago*, *capensis*, *coerulea* and *alba*, *Phygelius capensis*, *Santolina* and *Abutilon Savitzi* lend themselves well for this purpose.

Much more could be said on the subject, but in my opinion, one runs no risk of failure by adhering to the points laid out in my modest essay.

The paper was received with an appreciative vote of thanks. Mr. S. C. Moon then read his paper on hardy shrubs, how to plant and treat them. This was declared to be a paper of unusual practical value and brought out a number of questions which Mr. Moon replied to briefly. We hope to publish this paper in full at a later date.

The report of the exhibition judges was then presented and was accepted with thanks. Awards on novelties were made as follows: Conard & Jones Company, honorable mention for canna William Saunders and New York; W. A. Manda, certificate of merit for *Dracaena Mandaiana*; honorable mention to F. R. Pierson Company for *Nephrolepis superbissima*; Charles Ehle, honorable mention for unnamed *Nephrolepis*; John Lewis Childs, certificate of merit for white seedling *gladiolus*; M. Rice & Co., highly com-

mended for ornamental tree log; D. B. Long, highly commended for fine art folders; certificate of merit to Hart's Handy Handle, a device for supporting flower pots; honorable mention to Wilson's steel concrete greenhouse bench; Dayton Paper Novelty Company, highly commended for embossed flower boxes.

Next Year at Niagara Falls.

The next business—selection of a meeting place for 1907—brought out the usual oratory. Ex-Mayor W. W. Cutler of Niagara Falls, N.Y., presented the claims of that city. Detroit as represented by Philip Breitmeyer, gracefully withdrew and Niagara Falls got a unanimous vote. For president F. H. Traendly of New York and J. R. Freeman of Washington were nominated the first by W. F. Kasting and the latter by J. C. Vaughan. For vice-president W. W. Cutler and Geo. W. McClure were put in nomination. Secretary Hauswirth and treasurer Beatty were given each a unanimous nomination.

Mr. Farquhar presented the report of the committee on name of the society and recommended that a petition be presented to Congress asking that the name be changed to The Society of American Horticulture. This was the signal for much oratory which was finally cut short by a motion to postpone decision until Thursday morning.

The Trip to Riverton.

When the steamer Columbia started out from her pier at the foot of Arch street at 2 p. m., she carried one of the largest and most representative gatherings of florists ever assembled in America. Arriving at Riverton the visitors were escorted to the Dreer nurseries and an inspection of the extensive hardy perennial collections and numerous greenhouses was at once begun. Unfortunately a succession of heavy showers interfered with much out-door pleasure but all was merry in the great sheds attached to the range of fern houses where a substantial lunch was dispensed amid surroundings gorgeously adorned with brilliant bloom. After all had been satisfied President Stewart called the assemblage to order and briefly voiced the appreciative gratitude of the visitors to their hosts. A wild outburst of cheering greeted Mr. W. F. Dreer as he mounted a chair and told of the pleasure it had given him to welcome the fraternity to his vast establishment. Cheer upon cheer followed Mr. Dreer's kind remarks.

THURSDAY'S SESSION.

The initial topic of interest at the opening of the Thursday morning session was the election of officers. Mr. Cutler withdrew his name as a candidate for vice-president. Balloting went on for one hour during which time the question of the change of name of the society brought out some lively discussion on the phases of the society's aims and legitimate field of operation between the warhorses of the organization. After being amended the proposition was finally defeated by a large majority. Mr. Hallock then proceeded to read his paper on hardy bulbs and tuberous rooted perennials, which was deferred from Wednesday.

An interesting discussion followed after which superintendent Rust presented his report on the trade exhibition which was accepted. Mr. Hallock then presented his paper on "Horticulture in the Public Schools."

Horticulture in the Public Schools.

By referring to last year's report of this Committee it may be seen that the School Garden movement is already an active factor. Most wonderful results have been accomplished by individual effort. Whole communities have been benefited under the direction of individuals and also of associations. Good examples of these two methods are what Mr. John H. Patterson has done in Dayton, Ohio, and the Home Gardening Association in Cleveland, etc.

The School Garden has passed its experimental stage. Its success and good results are assured. But, as stated in the committee's report of last year, there is "lack of concerted action" in the present methods of work, "no two schools or organizations conducting their garden-work on the same lines."

It is proved beyond doubt, by the success of these different movements, that the teaching of horticulture in the schools is of more importance than any one realized; and the successful outcome that has been attained, all by different methods, shows that elementary teaching of horticulture according to one method could be spread indefinitely throughout the country. Variations and broadening could be indulged in, but all should follow the lines laid down. It seems as though there had been enough proof offered and its vital importance acknowledged by every one.

There is a tendency, we find, to confine the school gardens to our cities and large towns, where they have been established by civic associations and philanthropic workers, or to make them a part of some normal school system. The desire of this Committee is to reach the rural common schools, and to give the children of every rural district in the land some simple lessons in practical gardening adapted to their surroundings and their needs. The time has now arrived for doing, and many plans have suggested themselves to your Committee. To get a hearing before educational societies, or the local and state boards of education, is a difficult matter. A committee going before a state organization would be picked to pieces, criticisms made, difficulties piled up, a plea that the course is full, and a hundred other objections. We therefore believe and recommend that this subject of teaching horticulture in all the rural schools (and other schools wherever possible) be made an act of legislation, mandatory on the State Board of Education to embody it in the public school course; and that the Society of American Florists formulate a working plan to this effect, and prepare the matter for the 1st, 2d and 3d years, due consideration and consultation to be had with the State Board of Education, and limitation of time to be devoted to this subject fixed on—of not less than one hour per week in school, and not less than two hours out of school, except during the three winter months.

The Committee presents a tentative plan, and it is the sense of this Committee that the only practical way is to start with one State at a time, and we propose to have this bill passed by the Legislature of the State of New York. If there is any other State that the Society thinks would be preferable, the Committee has no objection.

As the Massachusetts Horticultural Society makes the broad statement (quoted in our report of last year) that its aim is to give every school in Massachusetts a garden and every child a home-garden, it might be more feasible to have this bill adopted by the Legislature of that State.

Following Mr. Hallock's paper W. B. Du Rie presented interesting remarks on the same topic as representing the special committee on the school garden movement appointed in connection with the discussion of the president's address. This was followed by an earnest discussion which continued until the appearance of the tellers prepared to announce the result of the vote for officers. The fortunate candidates were F. H. Traendly, New York, president; George W. McClure, Buffalo, vice-president; P. J. Hauswirth, secretary; H. B. Beatty, treasurer. The only contest was on the presidency and upon the declaring of the vote Mr. Freeman took the floor and moved a unanimous election for his opponent on the ticket, which was carried amid great enthusiasm. The several candidates were presented on the platform and each made neat speeches of acceptance. J. D. Carmody then claimed the platform, which was accorded, and in a characteristic, kindly speech he presented to President Stewart on behalf of the Society members a solid silver set of knives, forks and spoons of great beauty. Mr. Stewart tried to respond, but found only halting words to express his feelings, as he referred to the enforced absence of his partner because of severe illness, and tried to voice his thanks for this gift which would be jointly enjoyed.

HORTICULTURAL EDUCATION

By Horticultural Societies and Clubs, Including a Review of the Work of the Boston Landscape Class.

Paper by J. K. M. L. Farquhar read at S. A. F. Convention, Philadelphia.

It is undoubtedly true that all American horticultural societies and clubs have endeavored to promote interest in, and knowledge of horticulture. It is also true that the efforts of these organizations have resulted in great advancement along the lines they have worked. If, for the sake of illustration, we regard the field of horticulture as a complete circle, we find well defined lines running from its centre to the circumference in many directions, but, unfortunately we also find too many of the 360 degrees of its circumference to which as yet there appear no lines, vast fields of horticultural science which have hardly been trodden upon in this country. Considering the phenomenal successes we have developed along the lines which we have explored, it seems all the more regrettable that our efforts have not been more distributed.

The keen watchfulness, zealous ap-

plication and enterprise of the American florist have given him, in a single generation, first rank in the world in the production of roses, carnations, chrysanthemums, violets, sweet peas, asparagus and other plants in which he has specialized, and his intimate knowledge of the requirements of his subjects, gained by close personal observation to which his accomplishments are chiefly due, has rarely been equalled by his fellow-craftsmen abroad. This aptitude and past success make it quite obvious that he can achieve similar progress in new lines.

The florists have not hesitated to impart freely through talks and essays at horticultural meetings, the knowledge they have gained of their specialties. The nurserymen too have occasionally given valuable information on trees and shrubs and how to use them. Likewise the fruit and vegetable growers have most freely imparted the knowledge they have acquired. Again, the members of every horticultural society in the land have listened to predictions of despoilation by blight and insect until in dread of calamity their faces have become white and their lips blue like the trees and crops whitened with arsenate of lead or blued with copper sulphate.

But you will ask me,—“What about the untrodden fields?”

In the flower line there are many things yet untried which may and will be used both in commercial and private establishments. We have seen larkspurs, lupins, scabious, corn-flowers, schizanthus, leptosyne, etc., grown for winter-cutting as successfully as roses and carnations.

We force a few perennial plants like dielytra and spiraea, but how seldom do we hear of the campanulas, foxgloves, sweet-williams, trolius, Daphne cneorum, the Christmas rose and many other suitable biennials and perennials being forced, notwithstanding an existing and growing demand for greater variety and novelty in winter flowers.

I have alluded to talks on fruits and vegetables and their culture. Who has ever suggested the prolific and delicious Lichee of southern China or the delicate naseberry of the West Indies as subjects for culture under glass like the peach and nectarine, or, which of our vegetable experts has taken pains to advance our knowledge of salad plants or of herbs for seasoning, in both of which subjects we know much less than did the Romans when they occupied the northern shores of the Mediterranean two thousand years ago.

This is the day of progress and horticulture must and will advance in many heretofore neglected lines.

Generally speaking, it can best be advanced through the instrumentality of the all-round trained gardener. How many of our foremost florists have risen from the ranks of the private gardeners? Mr. Peter Fisher of Carnation fame, Mr. M. H. Walsh and Mr. Alexander Montgomery, whose names are garlanded with roses, are notable examples and there are others too numerous to be referred to individually now. I am satisfied that this is the day to stir the gardener to new activities, his opportunities for advancing both himself and his profession were never so good; besides too, he must look to his position—a

certain kind of landscape architect seeks to outstrip him and wrest from him the laurels and emoluments of his art. That which the gardener from his long practice and intimate acquaintance of his material, knows almost intuitively, this kind of landscape architect gathers a superficial, talking knowledge of from his books, and immediately begins to practice theoretically. His clients and the gardeners are usually the sufferers. Never has there been such an effort on the part of these impractical, book-made, self-styled experts to subordinate the practical gardener as at the present time.

We have many progressive trained gardeners, who are much more competent to lay out and plant a place than the mere graduate of a college landscape school. The gardener may not be able to make as attractive a plan, nor to talk so fluently of harmony of color, contrast of form, of light and shadow as the college man, but he knows how the grade should be, how to prepare the soil, how to plant the trees and shrubs and he has genius to plant a picture of such beauty, of such harmony, of such strength so exactly the complement of its setting, that beside it the labored composition of a college striping is a helpless misfit. Do not imagine, however, that I underestimate the value and advantage of the horticultural school course provided it is a practical one and supplemented by actual garden work, but I would rather trust with the arranging of a garden a man who has been taught to use the spade properly and who has a natural love of nature, than the horticultural school graduate who has learned to pot plants with gloves on.

It was with the view of bringing the best young gardeners to the front, to encourage them and qualify them for the opportunities open to them, that about a year ago, the Boston Landscape Class was organized. The class numbered about sixty members mostly working gardeners—many of them head men filling positions of responsibility, others assistants. It met twice a week, with an average attendance of about forty.

The subjects taken up the first year, included geometry, topographical drawing, projection, prospective, grades, harmony of color, landscape composition and the use of the level. The instruction was supplemented by field days for out-door demonstration and practice.

It is intended to extend the course over three years in which time the members should become thoroughly acquainted with the practice and theory of general landscape gardening.

The better class of landscape gardeners or architects will find the members of the Boston Landscape Class in no way opposed to them, but by their study better able to understand each other and co-operate to the mutual advantage of both when their work brings them together. At the same time, the gardener who has thus become familiar with both the practice and theory of landscape work will never give place to the book-made adventurer of the average superficial and impractical, two or sometimes three year landscape college course of the present time.

THE EXHIBITION

LOWER HALL.

The offices of the secretary, the registration bureau of the local society and the superintendent's office occupied the north wing. At the extreme west of the rotunda the space was occupied as a reception room by M. Rice & Co. Daniel B. Long of Buffalo has his usual display of artistic photographs, tags and other printing and publishing for florists. His motto of "Natural Beauty adapted to business" is well carried out in the new design of the American Beauty spray. Roseville Pottery Co., Zanesville, O., occupied the center aisle north with a fine display of artistic ware in elegant and novel designs. The ancient Egyptian style is well brought out in this exhibit as is also the fruit skin finish jardinières and pedestals.

The electric circulator from W. W. Castle, Boston, was a center of interest from start to finish. Mr. Congdon, who had charge of this exhibit, had an eager crowd around him all the time. The "Castle special" boiler was also shown and its fine points explained. When we build our model place by and by we will certainly have a "Castle special" in it. The Herendeen Mfg. Co., of Geneva, N. Y., showed their Furman 8-section boiler also the only aluminum boiler ever cast. This latter was a great attraction. A. Rasmussen, New Albany, Ind., had a model greenhouse on show to demonstrate his new method of working the ventilators. As near as we could make out the principle of this invention is to so balance the sash as to require far less effort to open or close. Oscar Smith & Sons Co., of Philadelphia, had a small exhibit of raffia and sphagnum and the Keller Pottery Co., of Norristown, has a nice display of common flower pots. The W. H. Moon Co., sent evergreen in tubs, American arbor vitae, Mugho pine Scotch fir, etc. Dayton Paper Novelty Co., made an interesting display of florists' boxes and similar items. The Quaker City Machine Co., had a model greenhouse showing their new sash-lifting lever, a device which lifts as much with 11 lbs. pressure as the old style did with 20 lbs. The Bombayreed Co., Columbia, S. C., had a nice display of reed jardinières and basket work. This showed great artistic skill in the workmanship and much progressive thought in the materials and designs. C. J. Rainear & Co., made a good showing of wrought iron pipe, valves and fittings. Lord & Burnham's display was quite extensive and one of the most interesting in the exhibition. They set up their largest sectional steam boiler complete; also their hub boiler specially designed for low cellars. The benefits of the special petrol grates for burning refuse coal were eloquently enlarged on by Mr. Craw, ably backed up by the Philadelphia manager, Dennis T. Connor, and a small army of lesser lights. Hummel & Downing came all the way from Milwaukee with a fine display of folding boxes. The King Construction Co., had a model of their special style of truss work on show. This attracted much attention, it being the same

method as is used in the large structures, such as were recently put up in this vicinity for the Florex Co., etc. Ellwanger & Barry contented themselves with a demonstration of American-grown dormant rose plants. The Whilldin Pottery Co. had a very large and interesting display of staple goods, from thumbs up to the largest, also seed pans, hyacinth pots, etc. Hammond's Slug Shot Works had an attractive stand in which their new Mt. Beacon green shading was given a prominent place next to the old English glazing putty. A. H. Hews & Co. of Cambridge, Mass., made an excellent showing of their well-finished and artistic pottery, a feature being their display of orchid pots. The Kroeschell boiler and the Moninger greenhouse occupied two-thirds of the center aisle. William P. Craig made a display of Italian pottery and gave his attention also to the Robert Craig Co. stand close by, where samples of the new fern Amerpohlii and fancy crotons were conspicuous. The new broad-leaved ficus was also a feature. William C. Smith made a fine showing of well-grown Boston ferns and rubbers, holding good to his motto: "Some give you quantity, some give you quality, I give you both."

UPPER HALL.

At each side of the grand staircase leading to the upper hall stood a 15 foot specimen of *Caryota Rumphii*, shown by C. B. Newbold, gardener Samuel Batchelor. Facing the central landing was the display of the H. F. Michell Co., an exhibit of seeds, bulbs and florists' and seedsmen's sundries, excelled by nothing ever shown before the S. A. F., and illumined by an electric sign. On each side hung the announcement of the Leo Niessen Co. Taking the various exhibits we find in the florists' supply line H. Bayersdorfer & Co. with an unrivalled display of florists' goods. Everything in rich ware, baskets and fancy floral goods was included in this attractive show. Near by was Schloss Bros. with lovely new ribbons, violet cords and dainty chiffons. J. Stern & Co. had artificial flowers of remarkable perfection in new material and preserved flowers, smilax, asparagus, ferns, holly, etc., in marvellous state of preservation. Wertheimer Bros. showed ribbon novelties in rich array. Reed & Keller made one of the largest and most comprehensive displays of florists' requisites ever staged here, including vases and vase stands of great beauty, artificial flowers, wire work, fancy pots and novelties in great profusion. Robert Kift's useful flower holders were artistically shown by Mr. Kift and the Philadelphia Flag Co. showed letters, emblems, etc. A fine exhibit of florists' supplies, artificial and dried flowers, etc., was made by J. G. Neidinger. The Pennock-Meehan Co. staged a vast display of ribbons and cords in rich variety, under a brilliant electric sign, which was a centre of attraction. Pretty pearl pins were shown by M. Adler. The Edwards Folding Box Co. and W. J. Boas each had fine exhibits of florists' boxes.

In cut flowers the exhibits were more extensive than usual. Conard & Jones Co. made a remarkable showing of new American pedigree cannas. Vaughan's Seed Store had fine gladioli including Princess and Mrs. Frances King. Arthur Cowee, as usual, brought a myriad of Groff's hybrid gladioli, which with the attractive attendants, made a striking display. From John Lewis Childs there came also a dazzling array of fine gladioli. James Vick's Sons made a beautiful display of their improved asters, superb blooms.

As might be expected the crack plant growers were out in force. F. R. Pierson's *Nephrolepis superbissima* made a sensation with its rich dark green massive foliage and their compact growing form of elegantissima closely following *Scottii* in habit, but lace-like in its foliage. The Pierson Company also showed bulbs in fine quality. E. Amerpohl made an exhibit of the beautiful *Amerpohlii* fern and Charles Eble showed a finely divided form of *Anna Foster*—a great improvement on that variety. The H. A. Dreer display was very extensive and comprised an infinite variety of ferns, palms and decorative material. Julius Roehrs Company also made superb displays of decorative plants, including many novelties, palms and orchids. Orchids were also shown blooming in unusual variety for this time of the year by Lager & Hurrell and C. D. Ball. Lemuel Ball and others were represented by fine groups of palms. There were orchids also from Carrillo & Baldwin, who showed some handsome things. W. K. Harris' group was especially interesting and attractive because of his new variegated form of *Bougainvillea glabra*.

Bobbink & Atkins presented a superb group of fine conifers in tubs. Such a display of shapely evergreens of all sizes is rarely seen. W. A. Manda staged a collection of new and rare plants, of which *Dracaena Mandaiana*, a robust sport from Neo-Caledonia, attracted much attention. "Boddington's Bulbs Bloom" was the inscription displayed in large letters over the Boddington bulb table. The goods look it, all right.

Wilson & Hoyt's new concrete steel bench was a center of interest. The Corts' stakes and fasteners and the goods of the Quaker City Rubber Co. were also in this hall.

When the St. Louis Special pulled out of the station on Sunday noon for the S. A. F. Convention it had 22 on board, including Henry Browning, J. J. Beneke, John Steidle, F. H. Meinhardt, F. H. Weber with their wives, W. C. Young, F. C. Weber, John Koenig, C. A. Keuhn, Fred Ammann, Adolph Fehr, W. H. Kruse and Emil Schray.

Architects desiring to compete for plans of the horticultural hall and greenhouses to be erected by the Connecticut Agricultural College, are notified that drawings must be signed and sent to the Comptroller, State of Connecticut, Hartford, not later than August 31, 1907, at 12 m.

Our New York contemporary fails to see
"Own your any merit in our suggestion that the flor-
home." ists' clubs and other local horticultural

bodies should try to secure and own per-
manent meeting places and finds nothing in the history
of the Massachusetts Horticultural Society to encour-
age such a course. The arguments advanced by our
contemporary are noticeable particularly for their pessi-
mistic flavor and after reading them one cannot but
congratulate the Massachusetts Horticultural Society
on the fact that in the days of its modest beginnings it
was not hampered in its enterprise and foresight by
such influences. The Massachusetts Horticultural
Society has been a power for good in many ways not the
least of which is the excellent example it has set for
other organizations to follow in their financial policy.
The suggestion that such a course is not practicable for
a florists' club because of the presumed limited resources
of the members thereof is too infantile to deserve serious
notice. No business man needs to be told how to pro-
ceed to secure ground and have a building erected
thereon on easy terms of payment. If the New York
Florists' Club, for instance, had done something of this
kind, with a reasonable foresight as to land values, say
ten years ago, there can be but one conclusion as to
what the outcome would have been.

The Single Purpose

in the reading columns of this journal is to give
intelligent readers the kind of matter which will be of
interest and benefit to them. This has been our policy
from the start and explains why a new paper has so
quickly won a reputation for good advertising results.
Every concern has its own way of doing business.

Our Way

is to aim constantly to catch the eye and the considera-
tion of the best men in the trade—those who are buyers
of first-class material and who can pay for what they
buy. If you have goods to offer to that class of buyers
then advertise the fact in HORTICULTURE and

You'll Get There

NATIONAL HORTICULTURAL SOCIETY OF FRANCE.

There are probably many of the readers of *Horticulture* to whom the name of the above society is familiar. As one of the great European horticultural societies a few notes on its position and work may be useful because there are many American visitors to Paris who would do well to include a visit to one of its shows if they happened to be there during the time one was being held.

The society which has been known under other names is now called *La Societe Nationale d'Horticulture de France* and was founded under the third Empire or, to be exact, on the 11th of August, 1855. It holds, every year, two great exhibitions, one in the spring and the other in the fall. These, since the Paris Universal Exposition of 1900, have been held in the two large greenhouses on the *Cours la Reine*, near the *Champs Elysees*, which formed the *Palace of Horticulture* during that immense international gathering. The society has also a hall of its own in the *rue de Grenelle* where smaller shows are held fortnightly and are largely patronized by the Parisian public. This building comprises various committee rooms and the large hall is decorated with some very fine wall paintings executed by some of the French artists most famous for their skill in the delineation of flowers, fruit and allied subjects.

From a recent statistical report we observe that there are nearly 4,000 members of different grades, inclusive of societies in affiliation. The annual subscription of an ordinary member is equal to \$4, and for this sum there are many privileges; entrance to the shows, use of the library and a copy of the monthly *Journal*. The *Journal* is of great interest to anyone interested in the art of gardening and it is issued in twelve monthly parts, forming a volume of considerable size. Its contents, of course, are as varied and as instructive as our own *R. H. S. Journal*.

The library is of unusual extent and rich in every department of botanical and horticultural literature. It contains about 15,000 volumes, in all languages and its monetary value would be difficult of computation for many rare French, Italian, Dutch and other old garden books are in the collection and in this respect is a long way ahead of the *R. H. S. of England*. A splendidly arranged catalogue is printed and supplied to members by the erudite Librarian, *Monsieur Geo. Gibault*, who knows more about ancient literature of this class than probably any man in Europe.

The work of the society is largely carried on by committees of which there are twelve in active co-operation. Briefly enumerated they are as follows: Scientific Committee, Pomological Committee, Vegetable Committee, Floral Committee, Committee of Arboriculture, Committee of Garden Art, Horticultural Industries, and one for Manures, also a *Chrysanthemum* and a *Rose* Committee and finally one for the examination of new fruits.

Besides awarding medals to the various exhibitors at the shows, and scholarships, the society rewards old gardeners for long and faithful service to their employers, as an instance of

which at the last of such meetings a gardener who had been in the same place for 55 years was awarded a gold medal and several others who had been 41 years, 31 years, 30 years and lesser periods in different families received similar recognition.

C. HARMAN PAYNE.

London, Eng.

WHOLESOME CHESTNUTS.

Now is the time to sow pansy seed for the production of flowers for cutting as well as for the production of good plants for next spring sales. Although we may be told that cheap seed sometimes produces plants of better quality than those produced from expensive seed it will be found the safer policy to pay a good price for the seed and to obtain from a source as near reliable as its reputation may indicate. There are several methods practised in sowing pansy seed. Some sow in flats and then place the flats in frames; others again sow the seed right in the soil in frames. The latter method is probably the better one especially if a very large number is to be grown. After the seed is sown it will be well to shade the grass temporarily, leaving it only until the seed germinates and the seedlings appear over the surface of the soil. The young seedlings should be transplanted before they begin to crowd one another. A bench of pansies for winter cutting will be found of great advantage. There are a hundred and one uses to which pansy flowers may be put by the retail florist.

Sometimes in the hurry to get returns early, young rose plants are allowed to develop blooms at a time when the vitality required therefor would have been better employed in putting healthy and robust constitution into the plants enabling them the better to give satisfactory and more lasting account of themselves later on. When disbudding is in process it will be far better to err on the side of safety than to lay too early a foundation for a crop. The soil in rose benches should be kept stirred and loose on the surface always. They will in that condition take more water with greater benefit resulting. This condition will also prevent the soil ever becoming sour on the surface. Roses or anything else will not thrive when there is a crust of sour soil on the surface covering the roots. Now is the time to be on the lookout for black spots on American Beauty plants; every leaf that shows the least sign of spot should be instantly removed.

A dry atmosphere is absolutely essential for the preservation of ripe grapes till needed for late use. In dry weather plenty of air should be given during the day and a little at night, but when the weather is wet or damp with little or no shine a little fire heat along with a free circulation of air will aid things considerably. When the surface of everything in the houses is made warmer than the outside air, evaporation will carry away the moisture. Graperies in which the fruit is now swelling should be kept moist. The leaves of a healthy vine carry off a great deal of moisture by evaporation and they cannot be kept in a healthy condition if this loss is not replaced; the red spider will in very little time make this plainly visible.

When the crop of peaches and nectarines has been gathered the trees should be kept regularly syringed and the border watered if it has been found to have become too dry. Air should be admitted freely in order to thoroughly ripen the wood.

The walks, lawns, borders, beds and shrubberies should continue to have unremitting attention. More genuine enjoyment is obtained from private places during the months of August and September than in any other month or months of the year by a great many people; it is therefore incumbent on the gardener to make every possible effort to keep the place in such condition that will afford the greatest pleasure to those at whose expense it is kept up. Hedges should be clipped neatly when the state of growth requires it, evergreens that are getting beyond the space allotted to them should be pruned, and preferably with a knife in order that the shorn appearance of shearing may be prevented. Herbaceous plants in borders should be kept neatly tied to inconspicuous stakes and decayed stems of such plants should be removed in order that the border may always have a fresh and neat appearance. All annuals should be cleared away except such as may be desired to produce seed. If unsightly vacancies result from an extensive clearance of these things there should be some material at hand to fill up again with.

Great attention must now be paid to the sowing of certain crops for autumn, winter and spring. In extremely dry weather it is desirable to sow seeds immediately after the soil is dug or forked over. Seeds will vegetate without moisture yet it is not well to drench them with water and then allow them to be parched up by the rays of the sun.

Violets should now be in such a condition as will enable them to make a good growth. From this time forward it will be ruinous to the plants to be checked in the slightest degree. The soil should be kept sweet and mellow by frequent stirring. The plants will now require that water be given them in plenty and applied judiciously. Just before watering when the soil appears in such a condition to require water a stirring of the soil will be of immense benefit to the plants. Ventilation is very important in the growing of violets. It does not do to simply leave the sashes off and let them have all the air going at all times and in all kinds of weather. In dry clear weather the sashes may be removed but when the rain begins to descend it will be well to replace them in such a manner that will prevent the rain getting at the plants.

PERSONAL.

J. Edgar Stuart, of Stuart & Haugh, Anderson, Ind., was married July 28, to Miss Louise Cloverdale of the same town.

Visitors in Boston: W. N. Rudd, P. J. Foley, Mr. Orcutt, Ed. Winterson and wife of Chicago; Samuel Parsons, consulting landscape architect for New York City.

H. Frank Darrow sailed for New York on August 15th, per S.S. *Deutschland*, from Hamburg, after visiting the various foreign firms for which he is the American agent.

SMALL FRUIT AND FIELD CROP
OUTLOOK IN NEW YORK.

The raspberry crop, usually an important one in the western and southern part of the state, will be finally gathered this week and growers are being offered 30 cents per pound for the dried fruit, but most of them are holding for a higher figure. The dry weather shortened an otherwise light harvest and few growers can boast of more than one-third of a crop.

Grapes continue most promising. Those who have sprayed most generously report an almost total absence of destructive agents. The crop, while not heavy, will be a good average one of excellent quality, and good prices are anticipated. In fact, grapes are the only fruit in this section which amounts to much this year.

Investigation and inquiry reveal the fact that the apple condition is most peculiar. While it is well known that the crop generally is close to a failure there are orchards and varieties which promise fair yields, and in this year of fruit scarcity they will return their owners more money, perhaps, than the fruit of some big years have produced. Fruit growers who have kept orchards in first-class condition are looking for a profitable crop. It could not be learned that buyers had as yet invaded this section, but they are working, with little results, this way, and their offers of \$4 per barrel for the fruit as it comes from the trees are not being accepted. Growers say that they expect to receive more than \$4 for their fruit.

Peaches are almost a total failure hereabouts. But the statement of Jay E. Allis, of Medina, Orleans Co., is interesting. "In my peach orchard," said Mr. Allis, "and I have over 60 acres of them, more than 30 in bearing the ground has been dragged more than half a dozen times this season. People have claimed all along that it was a needless waste of time and money to give the trees such attention, but when you stop to think that many peach orchards were winter-killed last year and will not bear to any great extent, and that I will have from 12,000 to 15,000 baskets, it shows that peach growing is a science. I will have better than 20 tons of plums and several hundred barrels of apples and many growers in the same locality will not harvest any at all. Already, I have sold my pears at \$5 per barrel, without barrels."

With no rain of consequence in some time, the crop situation is becoming more or less critical in several regards. Without rain, potatoes will not mature; and late oats will be materially affected. This was the statement of one of the most extensive farmers of this region. The drought has worked another transformation in the hazardous prospects of the agriculturist, with the result that whereas a few weeks ago he feared the result of cold, raw weather, he now fears that a relentless sun, without rain, will burn up his remaining crops.

Particular concern is felt for potatoes, farmers say. Late oats are not filling properly. However, with his usual optimism, the farmer is not worrying much. He looks for rain in time to save the potatoes and oats, and consoles himself with observing that

MICHELL'S MUSHROOM SPAWN

Our Mushroom Spawn is used by the leading growers throughout the country on account of its superior quality. Made by the same party who manufactured for us when we first embarked in the Seed business. He has upheld his reputation as a first-class English Spawn maker and this made our name prominent among the largest Mushroom Growers.

WYNCOTE, PA.

A ROYAL HORTICULTURAL SHOW.

On July 23 an excellent display was made. G. Bunyard & Co had a representative exhibit of hardy perennials shown in large bunches like sheaves making a grand spectacle. Veitch & Son contributed, among other things, cut flowers of *Rhododendron Javanojasminiflorum* hybrids—plants which thrive in an intermediate or warm greenhouse. They are very floriferous with neat leathery foliage. *Ne plus ultra*, scarlet, *Souvenir de J. H. Mangles* a lovely warm rose-pink, *Purity* the best white, and *Imogene* a buff-shaded yellow, while *Brilliant* is well worthy of its name. They again showed market-sized plants of the useful dwarf double *Begonia*, *Washington scarlet*, and *Col. Lousedat*—a true yellow. A new *Lobelia*—*Richardsoni*—will prove a very useful basket plant. *Haemanthus puniceus* is an improved form of the well known *Natalensis*. A seedling *Disa*—called "*Luna*," stated to be as hardy as the type—will be very useful among other cool subjects. Cheal & Son, put up lupines, veronicas and a few flowers of the monster *Chrysanthemum maximum*, Mrs. Lothian Bell—too coarse to be pleasing. H. Low & Co. showed small and large pots of *Baby Dorothy* which is simply a dwarf floriferous form of the favorite *Dorothy Perkins*. S. Bide & Sons showed their new Hybrid Tea Rose, *Queen of Spain*, which they state is a seedling from *Antoine Rivoire*; it closely resembles the old *Souvenir de la Malmaison*. It took the gold medal of the N. R. S. on the 4th inst., and has doubtless come to stay.

Barr & Son had a good collection of eucalypti from seed sown in January, most of them well-known *citrodorum*, etc., but one named *amygdalina*, with slightly almond-scented foliage, promises to make a light and graceful decorative market plant; others as *coccifera* and *erythronema*, are of merely botanical interest though pretty when young. H. B. May had again *Ixora Fraseri* and the gorgeous *macrothyrsa*, both indispensable plants for exhibition, also an improved oleander—*Nerium rosea splendens*—of dwarf branching habit and free flowering even in a small state so bound to be useful to the florist. *Davallia tenuifolia Veitchii* is a lovely attenuated

squirrel's foot fern. Major Holford had lovely *cattleyas*—one with a long title '*gigas Lord Rothschild magnifica*.' Some of his *Sophrora-laellias* were lovely, *Orpetiana* being particularly brilliant in color. T. Cripps & Son put up a good group of *Disagrandiflora*. I. Dutton (Iver) had a lovely lot of carnations and picotees.

Lord Aldenham set up a grand table of cut shrubs both in flower and variegated and other foliage. One named *Danea laurus* was our old and useful *Alexandrian Laurel*, *Ruscus racemosa*. Why will not Kew leave us alone in our happy ignorance? *Rubus ulmifolia* is an elegant silver-variegated bramble, and *Carpinus betulus aureis* is as bright as Russell's *Ligustrum ov. aureum* and if it does not burn will prove a first rate rival hedge plant. *Berberis vulgaris purpurea* (*Aldenhams* var) is grand, and contrasted charmingly with *Prunus orientalis*—with silvery foliage. *Cornus alba Spathe* is yet the best garden subshrub, but it must have a dry, somewhat shady spot to keep bright. From the same fine garden came a lot of hybrid *streptocarpa*, red, white and rich purples, with grand foliage, some two feet long!

THOMAS BUNYARD,
London, Eng.

OBITUARY.

Julius V. Fuller, a gardener employed by Kirchner & Butler, of Pittsfield, Mass., died suddenly on August 11 while on a vacation trip. A widow and a daughter survive him.

The death of Thomas J. Johnston, who passed away suddenly at his home on the morning of August 16, removes one of the best known and most popular florists in Providence, R. I. Mr. Johnston was but forty-two years of age; he has been identified with every horticultural movement in his section, and an active worker in the florists' club. The business which he has conducted for many years on Weybosset street will be carried on by his widow, who with two sons survives him.

Secretary F. P. Fenton of the Horse-shoe Park Agricultural Association, Willimantic, Ct., is arranging for a big flower show in connection with the coming fair. Florists and local growers of dahlias will be asked to contest for special prizes to be offered.

NEWS OF THE CLUBS AND SOCIETIES

AMERICAN ASSOCIATION OF PARK SUPERINTENDENTS.

The American Association of Park Superintendents held its annual convention in Toronto, Can., August 15-17, with headquarters at the Queen's Hotel and business sessions at the City Hall. The convention was well attended and was one of the most successful gatherings of the association since same launched out into a national society.

Some of the eastern members had difficulty in reaching the convention town in time on account of delays while en route, but the program was nevertheless carried out to the letter. The first day was spent on a carriage drive through the city and parks, taking in the most important public buildings and grounds and winding up with the exhibition grounds and High Park, where a luncheon was served at the Casino. Here the delegates were welcomed by the chairman of the Public Grounds Committee of the Board of Aldermen, representing the Mayor of Toronto. The very cordial welcome so extended was fittingly responded to by J. F. Cowell of Buffalo, N. Y. In the evening a business session took place at the City Hall. Theodore Wirth, superintendent of parks of Minneapolis, then read a short paper on Band Concerts in Local or Neighborhood Parks, in which he strongly advocated that such free concerts be given in the smaller parks, especially in densely populated districts. The reading of the paper brought forth a lively discussion on this timely subject and the majority of those present expressed themselves as much in sympathy with the suggestion. It was near midnight when the session came to an end.

The second session took place Friday morning at which the secretary's and treasurer's reports were received and other association matters were discussed. In the afternoon the delegates were treated to a sail over the harbor on a special steamer and the breakwater was visited, also the different island parks. This trip took up the entire afternoon and was a very pleasant affair ending with a tent luncheon on the lawns and under the trees of the island, the existence of which in place of sandbars and swampy land, the Toronto people very gratefully acknowledge to be the result of the work of their faithful and energetic commissioner and superintendent, John Chambers. Some very happy speeches were made on the part of both hosts and guests.

It was indeed a very congenial, sociable and happy party that landed that evening from that little steamer, and so refreshing and invigorating was the air of Lake Ontario that without exception every member attended the third business session which took place at 8 p. m. and lasted till after 11 o'clock. Mr. John Dunbar of Rochester read a very interesting paper on Trees and Stocks Little Used or Known in Park Work which was

followed by a general discussion as to the hardiness and adaptability of many specimens mentioned. Dr. Frank Baker of Washington, D. C., followed with a paper in which he thoroughly advocated the use of parks along more utilitarian lines than is at present the case in many cities; that more attention and room be given to outdoor games, school gardens and zoological collections. The suggestion regarding games, playgrounds, and school gardens was most favorably received by all present. Mr. Wirth was of the opinion that zoological gardens were very desirable and instructive and that all large cities should have them, but that sufficient special appropriations for such purposes should be made, and that no park department already short of funds for the performance of its regular duties, should be burdened with cheap menageries which at their best are but a poor side show and no credit to the department of the city. This view seemed to meet with approval of the majority of the delegates present. This brought the discussions to an end and the final business was the election of officers which resulted as follows:

President, John F. Cowell, Buffalo, N. Y.; vice-presidents, John Chambers, Toronto, Can., W. R. Adams, Omaha, Neb., John Dunbar, Rochester, N. Y., G. X. Amrhy, New Haven, Conn., J. W. Thompson, Seattle, Wash., Jackson Dawson, Boston, Mass.; secretary and treasurer, F. L. Mulford, Harrisburg, Pa. Harrisburg, Chicago, and the Twin Cities were candidates for the next convention and Minneapolis and St. Paul were finally chosen.

NEW ORLEANS HORTICULTURAL SOCIETY.

The regular meeting of this society was held on August 15. The chrysanthemum show committee reported that they had been unable to secure a suitable hall, or meet the Ladies' Floral Society, as most of the officers and members were away from the city. President Eble exhibited his new fern (yet unnamed), a sport from Anna Foster, which was awarded a certificate of merit. Otto Abele was reported to be slowly improving. P. A. Chopin invited the society to hold the next regular meeting at his residence, which invitation was duly accepted.

President Eble, U. J. Virgin and H. Papworth will attend the S. A. F. convention.

GREENWICH GARDENERS' SOCIETY.

At a meeting of the society held at the store of McMillen & Co., Greenwich, Ct., President Silas Frost in the chair, the constitution and by-laws were presented by Mr. McMillen and accepted. The executive committee were instructed to have membership blanks printed. The movement to hold a fall flower show was abandoned. Mr. McMillen read a very interesting essay on herbaceous plants, and a lively discussion followed. A vote of thanks was tendered him for his essay. The next meeting will be held September 4.

AMERICAN APPLE GROWERS' CONGRESS.

The apple growers held a two days' convention in St. Louis in the parlors of the Southern Hotel. Nearly every State in the Union was represented and the attendance numbered 150. President Dunlap, Secretary Wilson and Treasurer Green were all present when the meeting was called to order Tuesday morning, August 13th.

William A. Taylor, promologist of the Department of Agriculture, in an address, declared that the quarantine maintained by Germany on account of the San Jose scale, was unnecessary, inasmuch as the scale did not spread to foreign countries by means of the fruit. Experience of years has proved this, he said.

Professor Taylor said indications pointed to the removal of restrictions, and that commercial treaties with foreign countries would be beneficial to the fruit growers of the United States. Germany now has a tariff of \$1.55 a barrel on American apples, but it is held in abeyance until July, 1908, and a tariff of only 50 cents collected, with the San Jose scale inspection.

Other speakers were, Professors M. B. White and W. M. Scott, pathologists of the Department of Agriculture; James A. West, Assistant State Entomologist of Illinois; L. A. Goodman, Kansas City; M. L. Dean, Pontiac, Mich.; Wesley Green, Des Moines, Ia., and M. Burton, Indiana.

On Wednesday the Congress adopted a report of its Committee on Tariff Changes, urging a reciprocity treaty with Germany and France, and the removal by these two countries of the ban on American apples picked from San Jose scale-infected orchards. The crop will be very short this year.

The principal address of the morning was made by Irl R. Hicks, of St. Louis, on the effect of weather condition on the apple crop. F. H. Simpson, Flora, Ill.; Major J. Mack Tanner, Springfield, Ill., and Colonel Richard Dalton spoke during the day.

The meetings were closed with an address by former Lieut.-Gov. Norman J. Colman, of St. Louis, who spoke on the pure-food law and its effects on the apple grower and on cider-making.

Officers of the congress were re-elected: H. M. Dunlap, of Savoy, Ill., president; T. C. Wilson, Hannibal, secretary; Judge W. R. Wilkinson, of St. Louis, was elected vice-president of the congress and of the Missouri department.

It was also decided to meet in St. Louis, August 14 and 15, 1908. In the evening the delegates were guests at the Shaw banquet on invitation of the Missouri Botanical Garden.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The club will hold a field day at the Bay State Nurseries, North Abington, on Saturday, August 31st. Members and friends will take the 12.43 train at South Terminal Station. Through the kindness of Mr. Wyman lunch will be served on the arrival of the visitors,

after which an inspection of the extensive and up-to-date nurseries will be made. Trains return to Boston 5.37 and 6.37. A cordial invitation is extended to any interested non-members to join in the field day. Ladies are specially invited.

A field day will be held at the dahlia farm of W. W. Rawson & Co., at Marblehead on September 21, to inspect the collection of 900 varieties of dahlias growing there.

The speaker of the next meeting of the club on September 17 will be R. G. Leavitt of North Easton. This meeting promises to be of special interest and a big attendance is assured.

W. N. CRAIG, Secretary.

MASSACHUSETTS HORTICULTURAL SOCIETY.

The last of the Saturday summer shows of the Massachusetts Horticultural Society in Horticultural Hall presented an attractive variety of flowers, fruits and vegetables. W. W. Rawson & Co. had a large vase of Gladiolus Harvard which attracted much attention, and a spike of a later claimant for honors, Kathryn, to which a first-class certificate of merit was awarded. Phlox was displayed in great variety, a first award being given to T. C. Thurlow; the asters and gladioli shown by Wm. Whitman and the sweet peas by Mrs. J. B. Lawrence were also in the prize class. Edward Parker, E. C. Lewis and W. J. Clemson were contestants for the best collection of vegetables in which the decorative arrangement was considered.

The florists of Scranton, Pa., enjoyed their annual outing to Moosic Lake August 14. All their places of business in the city were closed during the day.

FLOWER MARKET REPORTS

BOSTON There has not been much of a market the past week, business being more than ordinarily quiet. Asters have been received in large quantities also gladioli the latter being the best seen in this city for years but the prices received have been low in comparison to the quality of the stock. American Beauty roses have been the principal mainstay with but little demand at that. No. 2 and 3 roses although the supply is plentiful are hard to dispose of. Sweet peas have fallen behind this year both in quality and number owing mainly to the long continued dry weather.

BUFFALO Dullness still prevails in the cut-flower line, though stock has not been too plentiful. The early varieties of asters are in full swing and the fancy stock has been selling rapidly; as for short stems and ordinary, again too many as usual. Gladioli are improving daily, but mostly mixed varieties. Roses are coming in more plentifully, especially the cuts from young stock. Beauties are not of the best quality, though good considering cutting from old plants. Lily of the valley is still on the quiet list. Smilax and other greens plentiful. Longiflorum and Japan lilies are to be had in fine quality, demand fairly good.

INDIANAPOLIS The market continues on its course of mid-summer dullness. Asters are the main supply and are overabundant with prices demoralized. In roses the supply is equal to the limited demand. The new crop of Beauties are mostly short and medium stem. Gladioli are now fine and much used for window decoration. All kinds of lilies are plentiful and hard to move satisfactorily. Growing weather is still favorable, consequently there is a large surplus of outdoor flowers. Ferns and galax are more plentiful than last noted while fancy greens are a little short. Growers all report very satisfactory conditions in the chrysanthemums houses. About 25 per cent. more plants are being grown this year than last.

PHILADELPHIA Market only so-so last week. No marked activity along any line. Beauties were not very plentiful. Quality was all right and what few came in found ready sale. Kaiserins were fairly plentiful and found ready takers. Quality fully up to the average. Killarney sold better than Bridesmaids as a rule—a marked improvement is to be noted in former item. Brides were generally of poor quality and went slow. Libertys are keeping their end up and make their way at satisfactory prices. There are very few carnations on the market and these are averaging low grade. Lily of the valley is a very satisfactory stock on the whole. The quality is all that can be expected, and moves fairly well. Asters are between wind and water. The early crop is almost over and the midseason not quite in. A little later we look for better things; the "real thing" will loom up very soon. Gladioli are fine but move rather sluggish. Orchids might be called scarce, as there is a lean to the demand side. But a very little either way would demoralize the market as the call is only normal. Outdoor materials such as hydrangea, physostegia, lathyrus and gypsophila are plentiful, but there is no brisk call. It is a buyers' market. The buyer can have anything he wants at his own price. Sorry.

WASHINGTON The quiet condition of the cut flower market remains unbroken. We can not reasonably hope for any activity in that line though until after September 15th., when Washingtonians now absent at the sea-side resorts will begin to return to the city. Nearby asters are commencing to come in, and bid fair to be very good. Outside roses of the Tea family are coming in in good quantities but are short of stem, and do not command first-class prices. A few field carnations are beginning to blossom, but their quality does not commend them to the public. All eyes and thoughts are turned to the S. A. F. now in session in Philadelphia.

INCORPORATED.
Akron Floral Co., Akron, O., by E. M. Smith and others; capital, \$10,000.
Central Nursery and Floral Co., Kalamazoo, Mich.; capital, \$50,000.

BUSINESS CHANGES.

M. Lowery has purchased the interest of his partner in the business conducted by F. J. Baker & Co., Utica, N. Y.

A. Dallas, of Waterbury, Ct., has purchased the business of the West Side Hill Greenhouses and will continue the greenhouses and retail store under the same name.

The business of J. W. Bernard, at Marion, Ind., has been purchased by Gunnar Teilmann who after remodeling thoroughly will carry it on in connection with his present business.

The business carried on for the past twenty years by Thomas Vincent on West Baltimore street, Baltimore, Md., has been disposed of to George F. Lurssen, and the place will be known as The Flower Garden.

NEWS NOTES.

A. F. Longren has started in business at Des Moines, Ill. Carnations will be his specialty.

L. C. Hecock, Elyria, O., has sold his Lodi street place and will locate his greenhouses farther out of town, his store being on Broad street.

Fuhlbruegge Bros., Winona, Minn., were the victims of a heavy storm on August 6 which broke considerable glass and destroyed many plants.

Fire from an unknown source destroyed the greenhouses and stable of Patrick Kieran, superintendent of the water works department, Portsmouth, R. I., on August 12.

A cyclone and cloudburst which swept over the entire region from Bismark, N. D., to Duluth, Minn., centering about St. Paul, did serious damage to the crops on August 18.

Frank Oeschlein, Chicago, Ill., has transferred his entire business to Adams street and Forty-ninth avenue, where several new houses will be added to enable him to cope with his increasing trade.

SITUATION WANTED—On private place by sober, practical man as first assistant. European and American experience; good references. Address, O. W., 119 Main street, Irvington-on-Hudson, N. Y.

WANTED:—By middle of September, young man of refinement and good address as clerk in florist's store in suburb of Boston. Will be required to purchase stock and have general charge of store. First class references required. Address P. O. Box 3657, Boston, Mass.

FLORISTS' HAIL ASSOCIATION OF AMERICA.

Summary of the Secretary's Report for Year Ending August 1, 1907.

The 1,461 members of the Florists' Hail Association of America on August 1, 1907, insured glass as follows:

Single thick glass, 5,092,007; double thick glass, 15,058,024; extra one-half single thick glass, 754,993; extra one-half double thick glass, 1,840,066; extra whole single thick glass, 1,504,028; extra whole double thick glass, 4,246,279; amount paid for losses from Aug. 1, 1906, to Aug. 1, 1907, \$4,536.34, being equivalent to an insurance upon 27,197,867 square feet of glass.

The total receipts for the year ending August 1, 1907, as per treasurer's report, have been \$20,316.35.

The total expenditures as per treasurer's report have been \$11,169.90.

The cash balance at the close of the year is \$24,296.94, of which \$348.98 belongs to the Reserve fund, and \$23,947.96 to the Emergency fund. The Reserve fund now consists of \$17,400.00 securely invested and \$348.98 cash in hand, making a total of \$17,748.98.

Seventy-three losses, representing a breakage of 36,982 square feet of single thick glass and 27,331 square feet of double thick glass have been paid during the year.

One thousand and one hundred losses have been adjusted since the organization of the Association, involving a total expenditure of a little over \$105,000.

The 10 per cent. assessment on hazardous risks netted the treasury \$38.52.

It is with a great deal of satisfaction that your secretary is able to call attention to the fact that the reserve fund is rapidly approaching that point where it will be amply able to meet the largest possible individual loss. And the growing stability of the Association proves that the projectors of the scheme bided perhaps better and stronger than they realized a decade ago.

The only liabilities of the Association are ten losses which will aggregate about \$600 and of which no proofs have been filed.

The secretary again wishes to call attention to the fact that a duplicate of any loss will be furnished to any member of the Association upon application.

The false economy of tempting Providence was forcibly illustrated at Newburg, N. Y., about a month ago, where many thousand feet of unin-

?

Is Your Name In The Above List? If Not, Why Not?

sured glass was reduced to scrap, by a violent hail storm.

The officers and directors especially refer the members to the report of the treasurer, believing that a careful perusal will secure an approval of their stewardship.

JOHN G. ESLEK, Secretary.

Treasurer's Report.

Total amount received for year ending Aug. 1, 1907, \$20,316.35; expenses for 1906 and 1907, \$2,481.87; losses from Aug. 1, 1906 to Aug. 1, 1907, \$4,527.16.

RECAPITULATION.

By balance on hand	24,296.94
	\$35,466.84

ALBERT M. HERR, Treasurer.

LENOX HORTICULTURAL SOCIETY.

The summer exhibition of annuals and perennials under the auspices of this society was held on August 15 and was very successful. Practically all the cottagers attended, and in the evening the hall was thronged. The exhibits of perennials were remarkable for the fine quality when the unfavorable season is taken into consideration. Never before at any of the society's shows were sweet peas displayed so abundantly and so strong. About two hundred vases were staged. In the class for 12 vases, 12 varieties, A. H. Wingett, superintendent for Chas. Lanier was first, M. T. Reynolds, superintendent for Mrs. E. R. Wharton, second, A. J. Loveless, superintendent for Mrs. John Sloane, third. In the class for 6 vases, 6 varieties, W. D. Curtis, M. K. Jesup and H. H. Pease received the awards. Among the winning collections were King Edward VII., Countess Spencer, Othello Dorothy Eckford, Helen Pierce, John Ingham, Navy Blue, Mrs. Kenyon, Nora Unwin, Miss Willmott, Lady Grisel Hamilton. Annuals were well shown by and first awards made to Mrs. E. R. Wharton, Miss Charlotte Barnes and Mrs. J. E. Alexandre, W. Jack, superintendent, in the various classes. In perennials Mrs. E. R. Wharton was first in 24 varieties and Miss Helen Parish first in 12 and 6 varieties. Particularly noticeable were the large vases of salpiglossis, delphinium, scabiosa and antirrhinum, and first awards in these were taken by J. E. Alexander, Chas. Lanier, W. D. Sloane, and Miss Charlotte Barnes, respectively. Phlox decussata was well displayed by Miss A. Kneeland, Mrs. George Westinghouse, E. J. Norman, superintendent, and gladioli by G. H. Morgan, Thos. Page, superintendent. Dahlias were not quite up to the Lenox standard, but interest centered about the fancy dahlia Chas. Lanier. The flowers grow to be six to seven inches in diameter. This will not be disseminated for two years.

In fruit and vegetables Chas. Lanier, R. W. Patterson, Thos. Proctor, superintendent, M. K. Jesup, J. J. Donahoe, superintendent, J. E. Alexander and

John E. Parsons, carried off the honors.

A diploma was awarded to Charles Lanier for blackberry Kittatiny; a cultural certificate to C. deHeredia for collection of vegetables, and a vote of thanks to Thomas Proctor for melon (indoor) weighing 10 pounds, 14 ounces. The judges were E. Jenkins and S. Carlquist.

ASSOCIATION OF AMERICAN CEMETERY SUPERINTENDENTS.

The annual convention of this Association opened on Tuesday morning in the Masonic Temple, Providence, R. I., at ten o'clock. President Cline introduced Mayor McCarthy, who welcomed the visitors to the city. President Cline responded briefly, after which S. J. Hare of Kansas City presented to the Association a gavel with head of highly polished Tennessee marble. President Cline then read his address, referring to the birth of the society twenty-one years ago, and the first meeting at Cincinnati, in April, 1887. Secretary Lawson made a provisional report, as his documents went astray in transit, stating that 21 joined the society at Detroit and 22 had entered since; 11 had been dropped for non-payment of dues, 6 resigned, 2 deaths. At 1.30 P. M. special cars were taken for the North Burial Ground, where an address was delivered by W. K. Reynolds, Chairman of the Commission. He stated that the first burial recorded there was in 1710; the first deed for a lot was passed in 1848. At 4.30 the company went to Field's Point, where a genuine Rhode Island clambake was served.

On Wednesday at 10 A. M. cars were taken for Swan Point Cemetery, where, after an address by President Alfred Stone, lunch was served and business taken up. In the evening a trip by steamer was made to Vanity Fair.

CLUB AND SOCIETY NOTES.

The village improvement society of Easthampton, Mass., held a flower show on August 16.

The Denison Civic Improvement League, Denison, Texas, will hold their flower show on November 6, 7, 8.

The Newport Horticultural Society will hold their fall show on September 17, 18, 19, in Masonic Hall.

The New York Florists' Club will hold its next meeting in the Murray Hill Lyceum, 160-164 E. Thirty-fourth street, between Third and Lexington avenues, New York City, on the night of September 9th.

The program for the chrysanthemum show to be held in Washington, D. C., at National Rifles Armory on November 12, 13 and 14 is now out and can be had from Secretary McCauley at 18th and Kearney Sts, N. E.

The preliminary schedule of the seventh annual exhibition of the New Haven County Horticultural Society is out, and can be had upon application to Walter Koella, 58 Bishop St., New Haven, Ct. November 6, 7, and 8 are the dates; Music Hall the place for the show.

The annual outing and clambake of the Utica Florists' Club was held on August 14 at Ilion, N. Y. The Albany

Florists' Club were their guests, and among those in attendance were Patrick Hyde, W. C. King, J. Haggarty, W. C. Gloeckner, F. A. Danker, J. C. McAllister and J. A. Howe, Jr.

The fifth annual fall show of the Huntington Horticultural and Agricultural Society, Huntington, L. I., will be held in September, and the committee request those who intend to donate money or prizes to give the matter their early attention. All communications or contributions should be addressed to J. R. McCulloch, chairman of committee, or A. H. Funnell, secretary.

The eighteenth annual banquet under the will of the late Henry Shaw to the gardeners, florists and nurserymen by the Missouri Botanical Garden, was given on August 14 at the Southern Hotel, St. Louis. Plates for 150 were laid and the tables were beautifully decorated. Dr. William Trelease acted as toastmaster and responses were made by President Dunlap of the Apple Growers' Congress, Park Commissioner P. C. Scanlan, W. C. Young, Walter Retzer, Prof. M. B. Waite, N. J. Coleman, L. A. Goodman, J. C. Vaughan. Among the members of the St. Louis Florist Club present were H. C. Irish, J. J. Beneke, C. A. Kuehn, J. F. Ammann, Carl Beyer, J. F. Filmore, W. C. Smith, A. J. Bentzen, John Connon, A. S. Halstead, G. H. Augermuller, J. W. Dumford.

NEWS NOTES.

The Foster Floral Co., are now in their new quarters at 909 Olive street, St. Louis.

The Alpha Flower Co., Des Moines, Ia., has leased the store at Seventh and Walnut streets.

The business of George F. Brehmer of Chillicothe, O., who died recently, is to be sold to close the estate.

T. D. Brown, Adams, Mass., is making extensive improvements in his greenhouses, putting in new boilers, etc.

Geo. W. Davis, of Detroit, Mich., has filed a petition in bankruptcy; liabilities \$2,013.87; assets, \$1,150, claimed as exempt.

F. P. Dilger, of Milwaukee, Wis., has announced the engagement of his daughter Charlotte to Charles Bondey of Kewaunee, Ill.

The three large greenhouses of the Lewis place in Longmeadow, Mass., recently purchased by Col. Phipps of the U. S. Army, retired, have been sold to J. W. Adams & Co., of Springfield, nurserymen, and taken down and removed to this place.

The greenhouse on the Ames estate, one of the landmarks of Chicopee, Mass., and said to have been the third greenhouse erected in the state, where the late Dexter Snow was for a long time gardener, is being taken down. When first put up there were twenty and thirty visitors from out of town some days, who would come to see what it was like. The ventilators were of cast-iron 2x3 ft. and weighed about 70 lbs. each.

The family have a fine Cycas revoluta, once the property of George Washington, and which has been in possession of the present owners for 97 years.

HITCHINGS AND CO.

THE ALWAYS BEHIND MAN

No man likes to be called lazy, but match him up with the man who always has time enough, and one gets done quite as much as the other. The point is, which are you when September's frost finds the new boiler still to be installed? Order it, have it on the ground, do a little towards getting it set up, as the chance offers, but get at it. Buy a greenhouse boiler, not just an any purpose boiler. Send for H. & Co. catalog.

HITCHINGS AND CO.

GREENHOUSE DESIGNERS AND BUILDERS.

Manufacturers of Heating and Ventilating Apparatus.

1170 Broadway,

NEW YORK.

A TEST CASE

Every "Burnham" boiler is a test case—tested fair and square under a water pressure way beyond its possible future demands. Made all through just the same way—always a dependable reserve strength for emergency call—and it's "easy on coal."

We make every part of a greenhouse but the glass. We sell any part.

Lord & Burnham Co., Greenhouse Designers and Manufacturers. New York Office, 1133 Broadway, Corner 26th Street. Branches: Boston, 819 Tremont B'd'g. Philadelphia, 1215 Filbert Street.

The combining of roof bar and rafter in one makes possible the only successful curved eave.

With U-BAR GRAPERIES

the side glass is carried down to the sill, which is placed just above the grade line. This gives a grapery, that in connection with the wide glass spacing and extreme lightness of the entire construction, is almost like growing grapes outdoors, as far as light and sunshine are concerned. The curved eave, the wide glass spacing, and mildewless aluminum paint finish are points that go to make U-Bar graperies the perfect graperies they are. Two interiors and several exteriors of graperies are shown in the new catalog. Send for it. **Pierson U-Bar Company**, Designers and Builders *U-Bar Greenhouses*, Metropolitan Building, Fourth Ave. and 23rd Street, New York.

W. C. STICKEL, Lexington, Mass.

AN ANNOUNCEMENT

Owing to the great demand for the field-plants of "John E. Haines" carnation, I am forced to discontinue taking any more orders for plants until September 20, when I will again have a fine lot coming in. My stock of the "Imperial" and "Pink Imperial" is considerably larger than the "Haines." have therefore still a fine lot of strong vigorous plants. Don't fail to get some of the "New Wonders."

JOHN E. HAINES, BETHLEHEM, PA.

Field-Growing Carnations.

We have for sale and now ready for delivery, extra quality Plants of the following varieties:

Beacon, Victory, Robert Craig, Harry Fenn, Nelson Fisher, Red Sport, Ro-e Pink Enchantress, Enchantress, Fair Maid, White Perfection, Queen, Variegated Lawson, Variegated Patten, Variegated Glendale.

We invite inspection. Prices reasonable.

British Horticulture

A POPULAR NEW ROSE

The new H. T. rose, Queen of Spain, introduced last year by Messrs. Bide and Sons, of Surrey, is increasing in popularity. At the National Rose Society's show it was awarded a gold medal, first prize, and a special prize; at the Holland House show it gained a silver Banksian medal. Subsequently at Paris the rose secured a first-class certificate, and in addition awards have been obtained at several of the provincial shows. It is a seedling from Antoine Rivoire and a hybrid perpetual. Messrs. Bide have two more seedling roses which are to be put in commerce. One is a pink bloom, and the other pink and lemon at the base.

A NEW TOMATO

W. P. Vaudin, a well known Guernsey grower, has brought out a new tomato named Vaudin's Secret. This is to supplement the Improved Lawrenson introduced by Mr. Vaudin some time ago. The latter is an early variety, but the Secret is intended for late crops, to follow the first hothouse crop, or to be a cold-house growth. The foliage has a distinct Hipper strain in it, and the few side growths made also follow the habit of that variety. The Hipper, however, is long-jointed, but this is stout, and the first truss appears about a foot from the soil. The trusses are very heavy, 14 to 15 fruits on each, and the fruits are also very heavy for their size, and yield five cwt. and over per perch on the first crop. So far the crop has been immune from disease. The new comer is likely to prove a valuable acquisition to the commercial grower.

THE FRUIT CROP

The fickle weather conditions have again given British fruit growers cause for great anxiety, and the season is likely to be very disappointing. The reports contributed by correspondents to the "Gardeners' Chronicle" show that the apple crop over all the country is of less value than last year. Pears are variable, being less scarce in England than they were last year but not so in Scotland. Out of 44 returns from Scotland, 32 report the crop as under the average, and in only one instance is it reported above the average. In Wales nine out of 21 correspondents, and in Ireland 11 out of the same number state the crop to be under the average. Plums are much more abundant than usual in most parts of England, and in Scotland, but the crop in Wales and Ireland is not so plentiful. Cherries are a good crop in most parts of the country, being much above the average, and the same remark applies with even greater force to peaches and apricots. The soft fruits, such as gooseberries, currants and raspberries appear less liable to miss cropping than apples, plums or pears; for some years past, as a rule, these crops have been generally good. This year they are certainly above the average.

for in England, out of 187 returns, all but four report average crops or crops above the average. The returns in respect of strawberries appear fairly satisfactory, but it is pointed out that the crop generally was not equal to the average, although it lasted for a longer period than usual. Owing to the lack of sunshine, the earlier fruits ripened very slowly, and many decayed during the process. At the best, the fruits were of inferior flavor.

W. H. Adsett.

The Beet Blight

The growing of sugar beets and their manufacture into sugar is an industry slightly aside from general horticulture. But there is a disorder in the growing of the beets which will be of interest to those who follow the various ills to which plants are heir. This is the beet blight. At this stage only a preliminary survey of the field is possible—there is so much to do and so little has been accomplished in several years of investigation.

The blight is an example of a physiological disorder. That is, it does not have a fungus, insect or bacterial origin but the cause is to be sought in a suspension of the working functions of the plant's organs. What brings this about is a question which is receiving much attention from those interested in the beet industry.

The main characteristics of the trouble are a dwarfing and stunting of the tops which take on a rosetted appearance and turn yellow. The roots cease to grow steadily and throw out enormous numbers of side roots. The ducts become discolored and blackened, an analysis showing the presence of a large amount of silica.

For several years the blight has caused considerable loss and while it doesn't occur in all localities, wherever present it means an enormous loss to the factory, for the machinery is run but a couple of months out of the year and for this time requires a steady supply of healthy roots.

After a certain stage is reached, blighting stops, so the whole question may simply be to get the plants to this point before the conditions favorable to the blight set in.

Beet blight is a very interesting example of a physiological trouble and is apparently in the same class with the aster yellows, peach yellows, little peach, peach rosette, tomato dropsey, cucumber stem curl, bronzing of rose leaves, calico disease of tobacco, and the like.

At some latter date this matter will be taken up more fully, but this short sketch will serve to introduce a rather new and decidedly absorbing plant trouble generally unknown.

mission which the summer dullness made possible for him. Those who have deferred putting houses in order for the winter's strain have no time to spare now. Already the chill and dampness of low morning temperatures warn of the danger of unpreparedness for resisting the evils that follow sudden changes of temperature. Don't defer anything now. Get busy.

A remarkable
convention

The uppermost subject of interest wherever the craft congregates this week is the convention of the Society of American Florists and Ornamental

Horticulturists which made Philadelphia the Mecca of the American horticultural world last week. When we stop to consider that out of a total of 17 ex-presidents now living 13 were present on this occasion and that of the remaining four, three were kept away only by sickness it is apparent that all the enthusiastic loyalty which the Society has enjoyed in the past is still to be counted upon as an element of conservative strength to supplement the vigorous activity of the youthful forces which are now forging to the front in the work of the organization.

A unifying
force

It is a very hopeful augury to see these young men, many of them sons of honored pioneers in the service of the national Society, gradually coming in, not

by sensational or revolutionary methods but by a quiet process of assimilation and taking their places alongside of the old-timers ready to assume their share of the burdens and responsibilities of the serious work of the Society. Attracted at first, in many instances, by the social pastimes upon which the Society has wisely smiled its approval, they have absorbed the grand inspiration with which the convention atmosphere is always charged and when their time comes we find them ready for the harness. In no other organization in the country are the special interests and peculiar needs of the older and the younger elements more skillfully interwoven than in the S. A. F.

A discredited
critic

In the closing paragraph of the address of the President of the Society of American Florists at Philadelphia, under the heading of "Business first,

pleasure afterwards," occurred the following words: "but with all their vociferation they (the bowlers) are among the best promoters in the Society's service." Our New York contemporary, exercising its prerogative as critic, makes the following misquotation editorially as the basis of an attack upon the cordial attitude of the President towards the athletic contingent in the Society's membership: "the bowlers are the best promoters in the Society's service." (The italics are ours.) No one has had better opportunity to estimate the ultimate value to the Society of the youthful element which has been attracted to the conventions in part by the sporting rivalries there engendered, than the late secretary who this year fills the position of presiding officer, yet there may be sincere differences of opinion on this and our contemporary has a perfect right to entertain such, but when, as in the present instance, whatever force its argument may have derives its strength from a misquotation, there can be but one opinion of the tactics employed in the effort to demonstrate that the President's remark was "a nullifying bad break."

Exit summer

September is at the door. The summer has passed and the cool breath of autumn comes to us in invigorating whiffs stirring us to new activity. Home coming is in order. From abroad, from mountain, farm and seaside the march has begun and again the worker takes up his task, refreshed by the brief inter-

WHOM WAS HE CHASING?

The sorrows of Satan are many. We have sympathized with Satan a good many times. Poor fellow he has his ups and downs as well as us poor mortals. He had several manifestations in the postscript meetings of the recent Philadelphia gathering. He appeared in various shapes; the gray-mouthed wood-wolf; the tawny lion; the whiskered tiger; the yapping hyena; the crawling serpent; the sleek and sly bed-bug that only comes out in the dark; and in the honest but foolish human; the latter the most efficient of all the manifestations, as is acknowledged in the old saying, "Lord preserve us from our fool friends." But, notwithstanding all this array of his powers we have to report that he had to sidestep and consequently we extend our heartfelt condolences.

This little homily may be fitly concluded by a quotation from Frank L. Stanton's latest:

Satan come a-chasin' me lively thro' the night;
Run me from de shadders ter de breakin' er de light;
An' I can't climb ter heaven an' de yuther place in sight,
An' I don't know what's a comin' on ter-morrer!

He run me—oh, he run me des as fur ez he kin see;
He swim de ragin river and he climb de burning tree;
An' I wonder what he wantin' wid a sinner po' as me?
An' I don't know what's a comin' on ter-morrer!

He shoo' got time—I tell you! ter be runnin roun' lak dat!
Wish't de harricane would head 'im or de earquake th'ow 'im flat!
De sinners sho'll be burnin' on de griddles whar dez at—
An' I don't know what's a comin on ter-morrer!

The guilty is the only one Satan can scare and he gets very mad when he finds himself chasing the wrong man, and wonders where the devil he is at and where the devil he is going sometimes. Hence our sympathies!

G. C. WATSON.

THE PYRAMIDAL GINKGO.

Editor of HORTICULTURE:

Dear Sir:—What Mr. Lonsdale says about the pyramidal form of ginkgo in Philadelphia is very interesting and the variety should be worth while propagating by grafting in the winter. From seedlings varying forms occur once in a while especially in coniferae, where they bear fruit. I do not think that these would reproduce themselves from seed, yet it is not impossible.

All the dioecious trees are more susceptible to pollination than the hermaphrodites and it is not surprising that the tree in Laurel Hill Cemetery bears fruit if there is a male tree even a few miles away. The same thing happens with date palms.

A. HANS.

Stamford, Conn.

There are several specimens of the pyramidal Ginkgo biloba on the grounds of the Department of Agriculture, Washington, D. C. The late F. L. Temple, while connected with a nursery at Bedford, Mass., propagated and introduced trees of this pyramidal form. I presume some of these at least are sports from the normal form.

E. Y. TEAS.

PERSONAL.

A. Leuthy, of Roslindale, Mass., has returned from his European trip.

J. Kirby, late of Chicago, has taken charge of the Redondo Carnation Gardens, Los Angeles, Cal.

Carl Lorenzen of New Britain, Ct., returned on the Deutschland, August 22, from a two months' trip to Germany.

Thomas F. Galvin, Jr., and Miss Frances Delaney of Cincinnati, Ohio, were married on August 23 in Brookline, Mass.

Peter Olsen, for the past five years with the Chicago Carnation Co. and Miss Emilie Lepper of Joliet, Ill., were married on August 17.

C. C. Shaw of Milford, president of the New Hampshire Horticultural Association, with Mrs. Shaw, observed their sixty-first wedding anniversary on August 27.

Supt. J. G. Morley, Los Angeles, Cal., attended the convention of park superintendents at Toronto. He and Morris Goldenson of Los Angeles were present at the S. A. F. convention in Philadelphia, with the distinction of having traveled the longest distance of those in attendance.

Visitors in New York this week: Ed. Sanders, Chicago, Mr. Trinz of Lubner & Trinz, Chicago, Harry Papworth, New Orleans, P. Zuger, Hartford, Conn., George Thompson, Lenox, Mass., A. M. Rennie, Providence, R. I., J. K. M. L. Farquhar, Boston, Messrs. Burroughs and Williams, St. Anne de Bellevue, P. Q., Mr. Ferguson of Depeu & Ferguson, Montreal, Superintendent Roy of public parks of Montreal, H. G. Berning and Mrs. Berning, St. Louis, O. G. Koenig and Mrs. Koenig, St. Louis.

Well Liked.

St. Albans, Vt., July 15, 1907.

Your paper is well liked. Find enclosed \$1.00.

HENRY BRYANT.

Indispensable.

Doylestown, O., July 15, 1907.

Gentlemen—Find enclosed money order for \$1.00 for HORTICULTURE another year. We feel we cannot successfully manage our greenhouse without it, and at present we are building an 80 ft. addition.

Yours Respectfully,
(Signed) C. A. MUSSER,
Wayne Co., Box 307.

Would Hate to do Without.

West Newton, Mass., July 9, 1907.
Hort. Pub. Co., Boston, Mass.

Dear Sirs—Enclosed you will find check for \$1.00 to pay subscription on paper "HORTICULTURE" which I would hate to do without.

Very truly yours,
(Signed) H. M. SHURBERT,
1600 Washington St.

WHOLESOME CHESTNUTS.

From now on the work of completing the planting of carnations will take up a good deal of attention and time. It may save much annoyance and some labor and money if benches are made secure and put in good shape before planting on them. Good soil is essential to any degree of success with carnations; good loam about four parts and one part of cow manure properly assimilated or mixed seems to suit them; the soil should not be packed firmly in the benches. When planting place the plants not any deeper than they were when growing out doors. Allow the roots freedom for extension, spread them out evenly, give them a good watering immediately after they are all planted. Do not shade the glass any more or for any longer time than will be absolutely necessary.

Boston ferns are planted out in benches and they make good growth there. There is no doubt about that but it is not good policy to leave plants intended finally for pots, there almost up to the time of selling. One might just as reasonably expect a tree transplanted out of a dense forest to make a good lawn specimen immediately as expect plants roaming at will in a bench to make shapely pot plants in a few days after being potted.

Now is the time to see that everything about the place is put into first class shape for the winter. All broken and cracked glass should be replaced; everything that will be benefited by a coat of paint should have that coat immediately applied, first taking care that as much of the dirt adhering to the wood as is possible to remove be removed; slats and pots should be put in convenient places all sizes in separate piles; flats needing but slight repairs to make them serviceable for another filling should receive attention and all flats past redemption consigned to the pile of fire wood without more ado.

Soil is one of the most important considerations in the whole volume of horticultural endeavor; for that reason the procuring and preparing of soil should have a great deal of thought and attention. While a cover for soil in the heap may be advantageous in some ways there is no question that the action of frost is beneficial as is also a good wetting provided the soil is not needed for immediate use which would necessitate its being used in a wet state, something, of course, detrimental to the success of the crop grown in such soil. All that is necessary in the way of covering for a compost heap is enough to cover the top.

GOOD NEWS.

Chatham, N. J., Aug. 27, 1907.

Editor of Horticulture:

Dear Sir,—The United States Express Co. has reduced its rate on flowers, to take effect today. The reduced rate in vogue for two months at Chatham is now extended to Madison, and, I understand, to all their other shipping points.

This reduction of expense in the express items of florists is entirely due to the good work of the Society of American Florists. We all congratulate President Stewart upon the successful outcome of his efforts in Washington. Respectfully yours,
FRANK L. MOORE.

THE CONVENTION PROCEEDINGS CONCLUDED

The discussion on Thursday forenoon following the excellent papers by E. V. Hallock and W. B. Du Rie, on the subject of horticultural education in the public schools, brought out a general interchange of views upon the necessity of making the study compulsory, the importance of employing efficient teachers and the value of school gardens and other practical means of imparting a knowledge of horticulture among children. The advances made along these lines, in recent years, in New York, Massachusetts and other States were detailed, and congratulations indulged in upon the outlook.

Prof. L. C. Corbett, of the Plant Industry Bureau of the Department of Agriculture at Washington, D. C., explained that there are now 30,000 school gardens in actual operation in the United States. He said the movement had made rapid strides in the South, where the young colored people did not aspire to become clerks and stenographers, but found a ready means of advancement in a horticultural and agricultural education. The State of Mississippi is foremost in making the study compulsory in the public schools. New York, the speaker said, has taken the lead in this branch of education, and Massachusetts and Maryland ranked next in the list in their demands upon Washington for assistance. Patrick O'Mara, of New York, spoke of portions of the "rough-house" districts in that city, which had been revolutionized in morals and social character by the influence of school gardens.

The convention requested the committee on the subject to continue their efforts for favorable legislation, and made arrangements for furnishing all societies, journals and boards of education interested in it with copies of the papers just read and the discussion thereon.

Thursday Evening.

At the session on Thursday evening a paper by Mr. Theo. Wirth on "Horticultural Education in Agricultural Schools" was read and discussed. Several speakers deprecated the lack of practical education by college graduates; and W. N. Rudd, of Chicago, spoke of what had recently been accomplished in Illinois in the interest of floriculture, where a strenuous effort had resulted in securing a State appropriation of \$15,000 for the exclusive benefit of growers under glass. The establishment at the State University of a school for practical training in floriculture was also probable. W. W. Castle, of Boston, said that in the Weymouth Agricultural School, in the Cape Cod district of Massachusetts, prizes are given to children for the best specimens of plants and vegetables cultivated by themselves.

J. K. M. L. Farquhar, of Boston, read a paper on "Horticultural Education by Horticultural Societies and Clubs, including a review of the work of the Boston landscape class."

The outlook for the National Flower Show in 1908 was discussed at some length. Chairman Kasting, of the committee on the subject, reported that the subscriptions to the guaran-

tee fund amounted to \$10,490; that the committee contemplated holding the show in November, 1908, and that arrangements had been made for the printing of the first premium list by the trade papers. He anticipated that the committee, at its next meeting, would have to make a first call upon the guarantors for money. He added that it was his own belief that they would eventually be able to pay all the money back. In reply to inquiries he explained that there was no apprehension that the Presidential election would interfere with the success of the undertaking, as the show would not be held until the week following the election.

The discussion turned mainly upon whether the spring of 1909 or the fall of 1908 would be the better time to insure the success of the exhibition, financially and otherwise. Robert Craig favored the spring as a time when plants and flowers would be in better shape, more numerous and of greater variety. J. C. Vaughan preferred the fall because the people of Chicago were accustomed to such exhibitions at that season. He explained that, as it would be a national and not a local affair, the responsibility for its success would devolve upon the florists of the East and West and not upon those of Chicago. Irvin C. Berterman suggested that as the committee in charge of the matter had general supervision of the details they should be allowed to fix the date. On motion of Mr. P. O'Mara the whole matter was referred to the existing Committee of Fifty (which includes the Executive Board) with full power to act.

The Ladies' Outing at Willow Grove.

Three hundred ladies participated in an outing to Willow Grove, on Thursday afternoon, under the auspices of the local club. The route was by trolley for fifteen miles through a beautiful rural section adorned with palatial residences and large private estates, including those of the millionaire manufacturer John B. Stetson and the merchant prince John Wanamaker.

Arriving at the park the visitors were entertained in the music pavilion, where they listened to Sousa's celebrated military band. Lunch was served in the Lakeside Cafe. The remainder of the afternoon was spent in viewing the attractions of the Park and listening to the music.

Friday Morning.

The convention met on Friday morning in the hall of the local club, at Horticultural Hall, and resumed business promptly at nine o'clock. E. V. Hallock submitted for use by the committee on the subject a draft of a statute for the establishment of school gardens, to be submitted to State Legislatures. Upon his motion the membership of the committee was increased by adding thereto Messrs. Patrick O'Mara and F. R. Pierson. A report from the Committee on Publicity, recommending individual work in disseminating information, prepared by S. S. Skidelsky was read and filed, and the Executive Board was authorized to expend this year \$200, in co-operation with the Council of Horticulture, in disseminating through three

thousand newspapers information about flowers and plants.

The Committee on Plant Registration and Nomenclature reported recommendations which the Executive Board were instructed to carry out.

Announcement was made of the presentation to the Society, by ex-President Dean of Freeport, N. Y., of two bound volumes containing the entire records of the conventions of the Society.

The Outing at Belmont Mansion.

A glorious day's outing at Belmont, in Fairmount Park, as guests of the Florists' Club of Philadelphia, was attended by about 1000 members and their ladies. The party was conveyed to the park in electric busses, some of which stopped on the way to inspect the grounds at Girard College in charge of Superintendent Edwin Lonsdale and Horticultural Hall. The program of the day included diversions of all kinds from automobile rides and dancing to field sports. There was a base ball game between a nine from the local club and a picked team from other clubs, the latter winning by a big score. The Philadelphia team appeared in natty uniforms but this availed them nothing against the scientific work of pitcher C. J. Graham of Cleveland.

A threatening rain storm was fortunately side-tracked until every one had taken refuge under the mammoth tents in which the dinner was served. The dining tables were tastily decorated with ferns, bouquets of gladioli, late roses, phlox and golden glow. After the dinner the bowling and shooting prizes were presented to the successful competitors in the contests of the previous day. Ex-President O'Mara made the presentations and accompanied each with a humorous and pertinent little speech. President Stewart then briefly expressed the gratitude of the visitors for the hospitalities and many kindnesses they had received. He said the Philadelphia brethren had abundantly fulfilled their promise to make this the banner convention and called upon the Committee on Final Resolutions for their report. The report was read by Mr. Farquhar and embraced resolutions of thanks to the local club and its officers, the Mayor and ladies of Philadelphia, Mr. Wm. F. Dreer and others for courtesies and co-operation in making the convention a success, and was adopted amid tumultuous applause.

Friday Evening.

The convention held its final session on Friday evening. A memorial in honor of the late Thomas Meehan, of Philadelphia, was adopted. A communication from W. N. Rudd, complaining that because of the lack of uniformity of moulds, "standard" pots do not nest and breakage results. A committee of three was appointed, consisting of Robert Craig of Philadelphia, F. E. Palmer, Brookline, Mass., and John Birnie, W. Hoboken, N. J., to investigate the pot question and make report next year.

In accordance with the recommendation of the Executive Board an appropriation to cover expenses in connection with the late suit against the

United States Express Co. was voted. A prolonged discussion took place as to the best method of book-keeping and accounting in the office of secretary and treasurer.

President Stewart thanked the members for their attention and earnestness in the work that had been accomplished in the convention and a vote of thanks to the president for his efficiency in the chair was in turn accorded. Adjournment was then voted and thus amid the utmost good nature and cordiality passed into history the great Convention of 1907.

THE S. A. F. TRADE EXHIBITION.

Our account of this exhibition and list of exhibitors as given in last week's issue was unavoidably hurried and somewhat incomplete. The following should be added:

Fernery Greenhouses, Govanstown, Md.—A pure white semi-double sport, from Queen Alexandria daisy.

Fertilizer Products Co., Jersey City, N. J.—Plant-Blood, claimed to be an ideal food and tonic for house plants and the garden.

C. S. Ford, Philadelphia.—Florists' immortelle letters, designs and florists' novelties.

H. D. Gara Co., Philadelphia.—Insecticides: Alco-Naptha.

Keystone Sheet Metal Co., Ambridge, Pa.—Patent metal hot-bed sash.

F. L. Moore, Chatham, N. J.—Sunnywoods Hose.

Morehead Mfg. Co., Detroit, Mich.—Morehead automatic steam tank, meter and return traps.

Godfrey Aschmann, Philadelphia.—Plants. Also a very rare old botanical work in the German language.

Crowl Fern Co., Millington, Mass.—Hardy cut ferns, laurel loose and in roping.

E. H. Cushman, Sylvania, O.—Blooms of Lillium philippense.

A. D. Carpenter & Co., Cohoes, N. Y.—Plant tie

Diller, Caskey & Keen, Philadelphia.—Greenhouse gutters and appliances.

Advance Co., Richmond, Ind.—Ventilating apparatus.

G. B. Hart, Rochester, N. Y.—Pot handle.

H. J. Smith, Hinsdale, Mass.—Hardy ferns, Christmas trees, greens.

Altimo Culture Co., Canfield, O.—Asters.

Carolina Glass Co., Columbia, S. C.—Baskets.

Foley Mfg. Co., Chicago.—Greenhouse appliances.

Andrew Wilson, Summit, N. J.—Plant oil.

Warren Matthews, Dayton, O.—Coleus, Dayton Gem.

CONVENTION NOTES.

Messages of condolence were ordered by a unanimous vote to be sent to ex-Presidents Wm. Scott and M. H. Norton, both of whom had been prevented from attending the convention, the former by illness and the latter by an injury.

The vote for president was very close—163 to 147—and the friends of both candidates were kept on the anxious seat until pretty near the end of the counting.

Widespread regret was expressed at the enforced absence of Mrs. Stewart, who has but recently recovered from a severe illness.

The Ladies' Auxiliary has reason to be proud of its first season's work, the list of members now reaching 109.

A resolution of sympathy with Joseph Heacock and family in their recent severe affliction was adopted on Thursday evening by a rising vote.

For the first time in its history, the S. A. F. consumed four days before closing its business sessions. Despite the many entertainments an unusual amount of valuable work was put through. The Executive Board also made a record by holding two sessions during the convention.

The roof-garden reception at H. Bayersdorfer & Co.'s establishment on Thursday was the most elaborate private entertainment of its kind ever provided for Convention visitors. There was a sumptuous luncheon and music, and Messrs. Bayersdorfer and Berkowitz, with their ladies and a host of employees, spared no effort to make their many visitors happy. The opportunity to inspect the goods displayed on the various floors was availed of by the visitors, and was not the least of the instructive and enjoyable features of the occasion. Two couples were in service all day carrying the visitors to and from the Convention hall.

From all accounts the trip from New York to Philadelphia reflected great credit upon Messrs. Schultz, Nugent and Rickards, the committee entrusted with the duty of providing for the material satisfying of the 130 healthy appetites under their care. The old Scotch definition of perfection in this respect "A' fu' and nane left" was well exemplified in this instance, for everybody had enough, and the commissary was bare when Philadelphia was reached.

CONVENTION GINGER JAR.

What did you think of the convention? That is the universal salutation today—Monday. Personally, I think it was O. K. I enjoyed every minute of it from Monday morning to Saturday night, and I only saw one thousandth part—and kept pretty busy at that!

I have taken a few samples of other's views today and append one or two:

Leo Niessen—It was great—especially the Dreer trip. I never saw a bigger or more congenial gathering. But the service and merchandise at Belmont was not so good as might have been. I can't say anything about the tag, but I guess the bill will come in all right. (Sententious as ever.)

J. Herbert Inman—Fine convention. The feed at Belmont was great. Everything of the finest and served to the minute. And the business I did exceeded my most sanguine expectations. (Take your choice between these two.)

William J. Baker: It was no good. I had no time to attend to anything for shaking hands with people. Who do they think I am—President Roosevelt?

Frank H. Traendly—It's not this one that's worrying me now. It's the next! Of course I'm proud but it's a big responsibility.

Captain Lynch—On ethical and aesthetical grounds I would consider last week's gathering a triumph of twentieth

century civilization and an honor to the most august body of men ever assembled together for instruction and amusement since the beginning of time. Gastronomically and esoterically it was beyond all praise. In other words, I think—"it was all to the good!"

J. K. M. L. Farquhar—I think you have a great city here, and great opportunities. We Boston people, proud as we are, see much to admire and approve in your parks and public institutions and in the general spirit of progressiveness everywhere. I go home chastened, yet inspired and exhilarated! That 'bus megaphone was a fine feature. You remember when the crowd passed the 38th street market where the biggest vegetables in the world were sold? Where "the vegetables were so large that three policemen had been known to sleep on one beat?" Yes! Well I have found those beets were all grown from Farquhar's seeds!

G. C. WATSON.

SPOKANE ASTER FAIR.

The Spokane Floral Association, of which Mrs. John Gilson is president, announces that silver medals will be awarded for the best displays at the twelfth annual aster show in connection with the Spokane Interstate Fair in Spokane, Wash., Sept. 23 to Oct. 5. It is expected to have exhibits from Washington, Idaho, Oregon, Montana and British Columbia, and these will be shown in a tent 40 by 80 feet, in connection with other varieties of blooms. The central idea is not the awarding of prizes, but a desire to show the visitors from the Inland Empire of the Pacific Northwest, and from other places, what may be done in the culture of flowers in the Spokane country.

Systematic work is being done by the ladies of the association to prevail on those who have fine gardens to place their flowers on exhibition, either in competition for the prizes or otherwise. Besides the regular prizes, blue ribbons will be awarded in the various classes by the Interstate Fair Association.

A new feature of the flower show will be the exhibits from the parks in Spokane, all of which have promised to send displays. The medal in this department will be given by the floral association. Liberty park, Coeur d'Alene park, as well as Corbin and Manito parks, will be represented.

Another feature of the fair that is being given especial attention this year is the display of potted plants. All potted flowering plants placed on exhibit will remain the property of the exhibitor and the association will be responsible for them.

It is also planned to have exhibits by the children of Spokane and the district. All plants exhibited in this department must have been cared for by the exhibitor, the object being to encourage the boys and girls in flower culture.

In the earlier days of Spokane the floral association did much in the way of providing seeds, even doing work in the city parks.

AUGUST WOLF.

Spokane, Wash.

During Recess

*"Hang Sorrow; care will kill a cat
And therefore let's be merry."*

CONVENTION SPORTING EVENTS.

The Bowling Contest.

Seven teams were entered in the bowling contest which took place at the Terminal alleys. Detroit, New York, Cleveland, Chicago, Washington, Baltimore and Philadelphia were the participants. Philadelphia had a walk over—nearly 200 pins ahead of the next highest. The scores follow:

LADIES' AUXILIARY BOWLING.

The ladies had almost as many teams as the men this year—entering from Baltimore, New York, St. Louis, Washington, Philadelphia and Chicago—six teams. They were given the honor of a separate building to themselves—the Olympic. The Chicago team won out, having an all star aggregation—three of them with over two hundred, while Philadelphia the next highest had only one over two hundred in the two games. The scores follow.

THE SHOOTING CONTEST.

The annual shooting contest took place on Wednesday at the grounds of the Florists' Gun Club, Wissinoming, Pa. Between showers the blue rock busters had a good time and spent the balance of the afternoon bragging about what they could have done if Jupiter Pluvius had only behaved himself. The scores were as follows:

1st Event, 5 prizes, High Guns to win. G. O. Bell, 24; W. B. Westcott, 23; W. K. Harris, 23; W. A. Hammond, 22; H. Brown, 21; G. Anderson, 21; E. W. Stevenson, 19; C. D. Ball, 16; W. Wheeler, 15; J. Burton, 15; A. Rasmussen, 12; Ed. Reid, 11; F. Adelberger, 9.

2nd Event, 25 Birds, Handicap for C. J. Rainier Co. cups and other prizes. Rainier Cups to first 3 High Guns and 4 prizes to the next 4 High Guns with added Handicaps. Shot off at 25 birds.

H. Brown, 25-25; J. Burton, 25-25; J. Stevenson, 25-20; E. Lotz, 24; Ed. Reid, 24; A. Rasmussen, 24; C. D. Ball, 24; G. Anderson, 24; W. B. Westcott, 24; G. O. Bell, 24; W. A. Hammond, 23; W. K. Harris, 20; E. W. Stevenson, 19; W. Wheeler, 19; R. McLennan, 13.

Shot off at 10 Birds. E. Lotz, 10; Ed. Reid, 8; A. Rasmussen, 7; C. D. Ball, 6.

Messrs. Anderson, Westcott and Bell withdrew from the latter contest.

The employees of Bertermann Bros. Co., Indianapolis, Ind., and their families held an outing at the Cumberland place owned by the firm on August 17. Baseball and the usual sports were indulged in and before the company separated it was proposed that the outing become a regular feature of the summer.

A subscription for an appropriate memorial to the late Emile Laurent, the great Belgian scientific explorer, has been started, and the names of the most illustrious horticulturists and botanists of Europe are inscribed thereon. M. le baron van der Bruggen, Minister of Agriculture at Brussels, is chairman of the committee, and M. L. Gentil, superintendent of the Brussels's Botanic Garden, is treasurer of the fund.

THE NATIONAL FLOWER SHOW.

SCHEDULE OF PRIZES AS PERFECTED BY THE SCHEDULE COMMITTEE.

One of the Chief Objects of this Exhibition is to bring to notice deserving Novelties and Rare Plants, which will be awarded Medals or Certificates of the Society.

Exhibitors may rely upon careful consideration by the Judges of all Exhibits in this class, also all deserving Exhibits, new or otherwise, whether specified in this Schedule or not.

OPEN TO COMMERCIAL AND PRIVATE GARDENERS.

Best Flowering Plant, Variety not before exhibited, Medal or Certificate of S. A. F.

Best Foliage Plant, Variety not before exhibited, Medal or Certificate of S. A. F.

Best Pelargonium (Zonale) not before exhibited in America, Medal or Certificate. Certificates of Merit, Gold, Silver or Bronze Medals may be awarded to other deserving Novelties.

Best Fern, other than Nephrolepis, introduced within three years or to be introduced within one year from date of Exhibition, not over 8 in pot or pan, Medal or Certificate.

PLANTS, best finished Group containing foliage plants of any variety, arranged for effect, covering not over 200 square feet, \$75, \$50, \$25.

Twelve Foliage Plants, grown in not over 8-inch pots, two Crotons admissible, \$50, \$30, \$20.

Six Flowering Plants, six species, six varieties, grown in not over 8-inch pots, \$25, \$15, \$10.

CALADIUMS, six named varieties, \$20, \$12, \$8.

FERNS, six named varieties, not over 8-inch pots, no Adiantums admissible, \$20, \$12, \$8.

ADIANTUMS, six named varieties, not over 6-inch pots, \$20, \$12, \$8.

LYCOPODS, six named varieties, not over 8-inch pots or pan, \$20, \$12, \$8.

DRACAENAS, six named varieties, \$20, \$12, \$8.

CYCLAMENS, twelve plants, \$15, \$10, \$5.

CROTONS, 25 plants, 25 varieties, not over 8-inch pots, \$50, \$30, \$20.

Best Fern of any of the Nephrolepis varieties not over 8-inch pot or pan, introduced to commerce within three years, Medal or Certificate.

CROTONS, six named varieties, \$30, \$12, \$8.

CYCAS, single plant, named, \$10, \$6, \$4.

NEPENTHES, six named varieties, \$15, \$10, \$5.

BEGONIA REX, six plants, six varieties, \$20, \$12, \$8.

OWVIRANDRA FENESTRALIS, \$10, \$6, \$4.

AQUATICS, General display of Nymphaeas, Nelumbiums, Sedges, Papyrus, and other Aquatic plants, \$50, \$30, \$20.

MARANTAS, 12 plants, 12 varieties, not over 8-inch pots or pans, \$30, \$20, \$10.

ORCHIDS, Best display cut flowers and plants, \$300, \$200, \$100.

ORCHIDS, best six plants, in bloom, \$50, \$35, \$15.

ORCHIDS, Best plant in bloom, \$25, \$15, \$10.

WINDOW BOX, filled with ornamental foliage plants for household decoration, \$10, \$5.

FOLIAGE PLANTS, ten plants, not over 6-inch pots, not more than two of any species, two ferns admissible, \$20, \$10.

CHRYSANTHEMUMS, limited to varieties not eligible to compete as Seedlings. All Chrysanthemum plants must show a single, clear stem for at least one inch above soil. To be judged by the following scale of points:—

Size of plants, 15 points; Form, 20 points; Bloom, 20 points; General effect, 25 points; Foliage, 20 points.

CHRYSANTHEMUMS, Best Specimen plant in the Exhibition, \$25, \$15, \$10.

Ten Varieties, one plant of each, not over 12-inch pots, \$100, \$60, \$40.

Two Japanese, not over 12-inch pots, \$20, \$12, \$8.

Two reflexed, not over 12-inch pots, \$20, \$12, \$8.

Two Anemone, not over 12-inch pots, \$20, \$12, \$8.

Specimen Incurved, \$10, \$6, \$4.

Specimen Reflexed, \$10, \$6, \$4.

Specimen Pompon, \$10, \$6, \$4.

Specimen any variety not included in above classes, \$10, \$6, \$4.

Six plants, six varieties, not over 7-inch pots, \$20, \$12, \$8.

Six Plants Pompons, six varieties, not over 7-inch pots, \$20, \$12, \$8.

Six Plants, single varieties, not over 7-inch pots, \$20, \$12, \$8.

CHRYSANTHEMUMS, Flowers to be judged by the following scale of points:—

Color, 25 points; Form, 25 points; Fullness, 15 points; Stem, 10 points; Petalage, 10 points; Size, 15 points.

Twenty-five blooms, twenty-five varieties, \$25, \$15, \$10.

Six Vases, six named varieties, 10 blooms ea. \$50, \$30, \$20.

Vase, 25 blooms pink, named, \$15, \$10, \$5.

Vase, 25 blooms red, named, \$15, \$10, \$5.

Vase, 25 blooms white, named, \$15, \$10, \$5.

Vase, 25 blooms yellow, named, \$15, \$10, \$5.

Vase, 25 blooms any other color, \$15, \$10, \$5.

PLANTS CHRYSANTHEMUMS, Limited to varieties not eligible to compete as Seedlings. All Chrysanthemum Plants must show a single, clear stem for at least one inch above soil.

Specimen plant, White, not over 14-inch pot, \$20, \$12, \$8.

Specimen plant, Yellow, not over 14-inch pot, \$20, \$12, \$8.

Specimen plant, Pink, not over 14-inch pot, \$20, \$12, \$8.

Specimen plant, any other color, \$20, \$12, \$8.

Specimen plant Single, \$20, \$12, \$8.

Specimen plant, Anemone, \$20, \$12, \$8.

Three Standards, not less than 30-inch stems, \$60, \$40, \$20.

Five Standards, not less than 12-inch stems, not more than 24-inch stems, five varieties, \$50, \$30, \$20.

Five Specimen Plants, not over 10-inch pots, five varieties, \$50, \$30, \$20.

Five Specimen Plants, five single varieties, not over 8-inch pots, \$30, \$20, \$10.

Five Specimen plants, five Pompon varieties, not over 8-inch pots, \$30, \$20, \$10.

CHRYSANTHEMUMS, twenty-five plants, grown to single stem, not over 6-inch pots, one color, \$25, \$15, \$10.

Grafted specimen Chrysanthemum, must have at least 3-inch stem above soil, \$25, \$15, \$10.

CHRYSANTHEMUMS, Specimen plant, variety not disseminated prior to 1906, not over 14-inch pot, \$15, \$10, \$5.

Specimen Plant, White, not over 14-inch pot, \$15, \$10, \$5.

Specimen plant, Yellow, not over 14-inch pot, \$15, \$10, \$5.

Specimen plant, any other color, \$15, \$10, \$5.

Six plants, six varieties, not disseminated prior to 1906, in not over 6-inch pots, one bloom to a plant, \$10, \$6, \$4.

Twelve plants, white, not over 6-inch pots, one bloom to a plant, \$15, \$10, \$5.

Twelve plants, yellow, not over 6-inch pots, one bloom to a plant, \$15, \$10, \$5.

Twelve plants, pink, not over 6-inch pots, one bloom to a plant, \$15, \$10, \$5.

Twelve plants, red, not over 6-inch pots, one bloom to a plant, \$15, \$10, \$5.

Twelve plants, any other color, not over 6-inch pots, one bloom to a plant, \$15, \$10, \$5.

Twelve plants, twelve varieties, not over 6-inch pots, one bloom to a plant, \$15, \$10, \$5.

Four plants, Japanese, four varieties, different color, not over 14-inch pots, \$50, \$30, \$20.

Three plants, varieties not disseminated prior to 1906, not over 14-inch pots, \$40, \$25, \$15.

Ten Palms, not over 8-inch pots, not more than two plants of one variety, \$50, \$30, \$20.

Palm, not over ten-inch pot, \$10, \$6, \$4.

Boston Fern (or Sport of same) \$10, \$6, \$4.

Basket Asparagus Sprengeri, \$10, \$6, \$4.

Two Araucaria robusta compacta, \$10, \$6, \$4.

Two Araucaria any other variety, \$10, \$6, \$4.

Specimen Cibotium Scheidii, \$15, \$10, \$5.

Six Nephrolepis, six varieties, not over 10-inch pots or pans, \$30, \$20, \$10.

Best filled Fern Dish, not to exceed 15 inches in diameter, \$10, \$6, \$4.

Basket or Hamper of Plants, \$25, \$15, \$10.

Display of Cut Asparagus, not less than 25 strings, \$15, \$10, \$5.

CLASSES FOR PRIVATE GARDENERS ONLY.

Best ten Zonale Pelargoniums, not over two of one variety, not over 10-inch pots, \$30, \$20, \$10.

One Palm, \$10, \$6, \$4.

One Croton, \$10, \$6, \$4.

One Dracaena, \$6, \$4.

One Decorative Plant, other than above, \$10, \$6, \$4.

One Nephrolepis Bostoniensis, not over 10-inch pot, \$10, \$6, \$4.

One Nephrolepis Barrowsii, not over 10-inch pot, \$10, \$6, \$4.

One Nephrolepis Whitmanii, not over 10-inch pot, \$10, \$6, \$4.

One Nephrolepis Scotti, not over 10-inch pot, \$10, \$6, \$4.

One Flowering Plant, exclusive of Orchids and Chrysanthemums, \$10, \$6, \$4.

Five Foliage Plants, five varieties, not over 12-inch pots, \$25, \$15, \$10.

One Grafted Chrysanthemum Plant, \$20, \$12, \$8.

Most Novel or Rare plant, \$10, \$6, \$4.

Twelve Ferns, twelve varieties, \$25, \$12, \$10.

CUT FLOWERS.

Chrysanthemums, Twelve blooms White, \$10, \$6, \$4.

Twelve blooms Yellow, \$10, \$6, \$4.

Twelve blooms Pink, \$10, \$6, \$4.

Twelve blooms any other color, \$10, \$6, \$4.

The follow Classes are not limited to Private Gardeners:—

Roses, 100 American Beauty, arranged for effect (growers barred), \$100, \$75, \$50.

Carnations, Seedlings and Sports, White, twenty blooms, \$5, \$3.

Red, twenty blooms, \$5, \$3.

Pink, Daybreak class, twenty blooms, \$5, \$3.

Pink, Scott class, twenty blooms, \$5, \$3.

Pink, Lawson class, twenty blooms, \$5, \$3.

Yellow, or striped, or blotched, on yellow ground, \$5, \$3.

Sweepstakes, Best Seedling carnation entered in above classes, not exhibited previous to this year, Silver Cup valued at \$25.

Chrysanthemums, Seedlings, sports and importations not distributed, to be shown on stems not less than 18 inches long. Each variety shown which scales 85 points or over, will be awarded the Society's Certificate of Merit.

Six blooms White, one variety, \$5.

Six blooms Yellow, one variety, not darker than Major Bonnaillon, \$5.

Six blooms Yellow, one variety, darker than Major Bonnaillon, \$5.

Six blooms Pink, one variety, lighter than Vivand Morel, \$5.

Six blooms Pink, one variety, not lighter than Vivand Morel, \$5.

Six blooms any other color, one variety, \$5.

Sweepstakes, Best Seedling or Sport entered in above six classes, Silver Cup valued at \$25.

CUT FLOWERS, OPEN TO ALL.

Chrysanthemums, Sixty blooms, twelve varieties, five blooms of each, \$50, \$30, \$20.

Thirty-six blooms, six varieties, six blooms of each, \$30, \$20, \$10.

Twelve blooms, one variety, any color, \$10, \$6, \$4.

Best variety, not disseminated, \$10, \$6, \$4.

Six blooms, any color, \$10, \$6, \$4.

Vase, 100 Blooms White, \$50, \$30, \$20.

Vase, 100 Blooms Pink, \$50, \$30, \$20.

Vase, 100 Blooms Yellow, \$50, \$30, \$20.

Vase, 100 Blooms any other color, \$50, \$30, \$20.

In above four classes arrangement as well as quality of bloom to be considered.

Six blooms, one variety, White, \$5, \$3, \$2.

Six blooms one variety, Yellow, not darker in color than Major Bonnaillon, \$5, \$3, \$2.

Six blooms, one variety, Yellow, darker in color than Major Bonnaillon, \$5, \$3, \$2.

Six blooms Pink, lighter in color than Vivand Morel, one variety, \$5, \$3, \$2.

Six blooms Pink, one variety, not lighter in color than V. Morel, \$5, \$3, \$2.

Six blooms Red, one variety, \$5, \$3, \$2.

Six blooms Bronze, one variety, \$5, \$3, \$2.

BOZEMAN, MONT., SWEET PEA CARNIVAL.

THE QUEEN'S FLOAT

The Bozeman Sweet Pea Carnival, the only event of the kind in the north Rocky Mountain region, is in its second year. It started in a suggestion for the improvement of the gardens and lawns and proved effective in that direction. Prizes were offered for the best sweet peas in various kinds and conditions and almost everybody in town planted them and raised them. The effect so far, upon the amateur planting and culture of the peas, has been to increase the quantity rather than to improve the quality. The emphasis which the parade received, last year and this, has also tended to promote the use of artificial rather than natural flowers, because they keep better. This year only a few carriages were decorated with

JAPANESE CARRIAGE

natural sweet peas, though they were used extensively in window decorations, for there is an enormous number of the flowers produced here. Thousands of bouquets were distributed free on the transcontinental trains which pass through the town and wagon loads were distributed among the departing guests.

Among the striking features of the parade was a hay wagon, apparently loaded high with sweet peas, which were thrown from the top in bouquets to the crowd below. A placard was hung below inscribed, Sweet Peas, 50c a Ton. The float prepared for the Carnival Queen had the seats made in the shape of sweet peas, in which were seated the Queen and her attendants. One of the most ingenious conceptions

was the water lily carriage. The body of the carriage was made one huge blossom, in the centre of which sat a tiny girl dressed like a winged fairy.

Whether the carnival will be kept up, or whether it will be changed in form or aim, it is too early to say. As a means of beautifying the town, and stimulating the interest in flower gardening it has undoubtedly done much good. It has also helped to bring visitors to the town from the less attractive mining towns of the region. Perhaps if the Carnival is kept up it will show more results in stimulating growers to seek for a fine quality of flowers. There are several gardeners here who make a business of growing peas for the State market, and find it very profitable. W. F. BREWER.

It is the purpose of the management

to have a large and fine display of

Cut Flower Work, believing that such a display would prove attractive to the public. Under the competitive plan this has always been difficult, or impossible, to accomplish, because no competitor in the retail business wants to get "Second" or "Third" premiums. It is proposed to have several examples of each item, as shown in the list below. Any florist desiring to exhibit, will please notify the Superintendent of the Exhibition. If there are too many applicants, the exhibitors will be chosen by lottery.

The management reserves the right to reject any exhibit deemed unworthy.

Mantel, 15 in. x 6 ft.; Mirror, grate, two examples, \$35 each.

Panel, 3 ft. x 5 ft., six examples, \$25 each.

Doorway Decoration, 8 ft. x 8 ft., four examples, \$40 each.

Dinner Table, round or oval, for 12 covers, four examples, \$50 or \$75 each.

Roses in tall vases, 4 ft. to 6 ft. high.

Fifty American Beauty, arranged for effect, four examples at \$50 each.

Fifty Any other Rose, arranged for effect, four examples, \$25 each.

One hundred Carnations, vases 2 ft. to 4 ft. high, arranged for effect, six examples, \$25 each.

Mirror Decoration, size of Mirror 4 ft. x 6 ft., \$25.

Chandelier Decoration, two examples at \$15 each.

Steamer Basket or Hamper, four examples at \$25 each.

Bride's Bouquet, six examples at \$25 each.

Bridesmaid's Bouquet, pair; three pairs at \$20 each.

Floral Valentine, six examples at \$10 each.

Chancel Decoration for Church Wedding, four examples \$50 each.

Decoration of Reception Room, four examples, \$50 each.

Decoration of Room for Home Wedding, four examples, \$75 each.

"Art Gallery." Deep frames, about 3

Seed Trade

There has been much discussion of the recent item on the growing of seed peas which appeared in these columns and of course there are two views expressed, the growers looking at the matter from their viewpoint, and the seed merchants from theirs, and while a majority of the latter insist that prices are high enough, and object to any advance, a few of the more progressive and broad-gauge recognize the force of the reasons given for the suggested increase, and say that if this increase carries with it superior quality, they are quite willing to pay it.

There is no question that the lowering of prices has resulted in the lowering of quality, and until prices are raised to a point where the grower can afford to give the time and expense needful to improve and maintain the quality of his stocks, the complaints against the quality will continue.

In comparing present day growing prices with those of twenty-five and thirty years ago it will be noted that there has been a great decline, and yet there is no good reason for this. It costs more to do business today than it did twenty-five years ago, and certainly much more than ten years ago, and while this fact has been recognized and applied by practically every industry in the country, the seed grower has continued to produce his goods at the same old prices, if indeed he has not lowered them, with the inevitable result—depreciation in quality. Is this because the average seed grower has received less gray matter than his brothers in other industries? Results speak for themselves.

It is not the purpose of the writer to make out a case for the grower, but to state facts, and these facts will undoubtedly be recognized by all candid, intelligent readers, fully acquainted with the subject.

The aim has been to elevate the seed trade, and there is no surer or better way than by improving the stocks they sell, and high quality can not be maintained on low prices; such a condition is artificial, and to quote the words of Emerson, "Nothing artificial, nothing arbitrary can endure."

If the trade will only recognize this fact and be willing to pay the grower a little more for his product, and the grower on his part will give more intelligent, painstaking care to his crops, both will be duly recompensed, the seed buying public would be better served, and the prestige and reputation of the seed trade correspondingly increased.

It begins to be evident that the varieties of sugar corn are doomed to failure in many sections of the country. A general failure is not expected, but the prediction is here made that 1907 will be rated a very poor corn year. It will also not be a good year for vine crops, and as the nights have already become cool, the warmth of the sun during the day will not be sufficient to enable tardy crops to catch up.

Judging by offers of onion seed coming from unexpected quarters, the

MICHELL'S MUSHROOM SPAWN

Our Mushroom Spawn is used by the leading growers throughout the country on account of its superior quality. Made by the same party who manufactured for us when we first embarked in the Seed business. He has upheld his reputation as a first-class English Spawn maker and this made our name prominent among the largest Mushroom Growers.

tramp crop will be much more of a factor than has been generally expected, and those who have been holding tightly to their seed with the expectation of getting some unreasonably high prices will regret that they did not sell when they could have drawn good but fairly reasonable figures. Prominent dealers now predict that yellows will range from \$1.00 to \$1.25, and flat reds from \$1.25 to \$1.50, white Portugal \$2.00, and white Globe \$2.50 to \$3.00, while red Globes will be little if any higher than flat reds.

Rumors that California seed growers are selling direct to consumers are again going the rounds, to be once more denied by those worthies, but where there is so much smoke there must be some fire. No names are given, but it should not be very difficult to learn the truth. This would seem to be a proper subject for the Wholesale Seedsmen's League to investigate.

T. J. Gray, the Boston seedsman, who has just returned from a visit to England, Scotland, Ireland, Holland and France, tells of an interesting episode at The Hague on the Queen's birthday. As he was entering the Victoria Hotel he saw four American flags waving down the street; he walked down and saluted them, and as he did so a hurrah went up from the hotel. A party of twenty-eight young ladies from Ohio, traveling with Col. Edward Wilson of Columbus, had observed his action, and as he stepped into the hotel they sang "The Star Spangled Banner."

L. W. Wheeler, for the past seven and a half years manager of the New York Branch of Vaughan's Seed Store, has resigned, and will start shortly for Southern California, where he expects to make his home. Mr. Wheeler is treasurer of the New York Florists' Club.

S. D. Willard, of Geneva, N. Y., State fair commissioner, is making a special effort to have large exhibits of flowers

and fruits at the State Fair this season.

The Tucker Seed House, Carthage, Mo., have purchased the fixtures of the Parsons Seed Co. and are making improvements on a large scale.

M. B. Faxon, formerly with the Livingston Seed Co., Columbus, O., has taken a position with J. M. Thorburn & Co., New York.

PUBLICATIONS RECEIVED.

DAFFODILS-NARCISSUS AND HOW TO GROW THEM.—Doubleday, Page & Co., New York.

Here is a book written with the laudable purpose of increasing the public interest in and knowledge of this most beautiful and varied of all the garden bulbs, but which because of its thoroughness and technical information as to classification and culture which it gives will prove as well a valuable handbook for the professional grower or dealer. A ready explanation of this somewhat unusual quality in horticultural books intended primarily for the public lies in the fact that the author is A. M. Kirby, well-known as the head of the bulb and flower-seed department of the seed house of Peter Henderson & Co., a gentleman well qualified to instruct on the subject.

The book will be found especially valuable because the varieties are rated as to their capabilities under American conditions and the garden value is kept constantly in the foreground. The text is divided into two parts: (1) Culture, including commercial production of cut flowers in the field and under glass; (2) a critical appraisal of all the varieties commonly in the trade (about 500). The illustrations are thirty-two in number and admirably supplement the text. The appendix contains a key to the daffodils, by Wilhelm Miller and Leonard Barron.

The price of the book is \$1.10 net, or \$1.21 post free. In style it is uniform with previously published vol-

BAMBOO CANES TOUGH AND STRONG

6 ft. long—\$1 per 100; \$6 per 1000; \$11 per 2000

They cost about 10 per cent. more than other kinds, and they are 10 times better.

STUMPP & WALTER CO., - 50 Barclay St., New York

umes in the Garden Library ("Roses," "Ferns," and "Lawns"), and any one or all of the four can be supplied at above quoted price by Horticulture Publishing Co., 11 Hamilton Place, Boston.

The McFarland Publicity Service, Harrisburg, Pa.—"The McFarland Message" for September. This periodical, published in the interests of better catalogues, handsomer illustrations, artistic printing, and modern methods of publicity generally, is well worth having. Indeed, no one issuing a catalogue can afford to be without it. One dollar a year for the cream of J. Horace McFarland's ideas in monthly instalments is a cinch.

CATALOGUES RECEIVED.

BODDINGTON'S CHRISTMAS SWEET PEAS

BODDINGTON'S EXTRA-EARLY CHRISTMAS WHITE SNOWBIRD.

An exceptionally early Sweet Pea for indoor flowering—will bloom six weeks after sowing. Color clear white upon long stems; habit fairly dwarf, and of exceptionally free flowering qualities. Trade pkt. 50c., per oz. 30c., ¼ lb. \$1, ½ lb. \$1.50, lb. \$2.50.

CANARY. Similar to the above, but flowers of an exceptionally good yellow. Trade pkt. 50c., per oz. 30c., ¼ lb. \$1, ½ lb. \$1.50, lb. \$2.50.

FLAMINGO. Color scarlet; free-flowering and early. As the crop of this variety was small, we can only send out packets this season for trial. Pkt. 25c., 5 pkts. for \$1.

BODDINGTON'S CHRISTMAS PINK. This is the earliest and most profitable and useful Sweet Pea in cultivation as by sowing the seed under glass in latter part of August, the flowers can be cut from Thanksgiving on during the winter months. Per oz. 10c., ¼ lb. 30c., ½ lb. 50c., lb. 75c.

BODDINGTON'S CHRISTMAS WHITE. A grand companion to Christmas Pink. Per oz. 10c., ¼ lb. 30c., ½ lb. 50c., lb. 75c.

Our Fall Bulb Catalogue now ready, if you have not already secured one—send a postcard today. Besides a full collection of seeds for fall sowing it contains a list of over

SEEN AT RIVERTON.

EXHIBIT OF CALADIUMS, FERNS AND PHLODENDRA

We present herewith two views taken in the Dreer greenhouses on the occasion of the S. A. F. visit last week. The Dreer establishment was founded in 1832 and incorporated in 1892 with Wm. F. Dreer as president of the company. The nurseries at Riverton cover 100 acres and there is an auxiliary farm of 30 acres near Moorestown, N. J. The glass at Riverton covers nine acres and heating is done by sixteen boilers, the water and steam being distributed through 23 miles of pipe.

In the group of new nephrolepis shown herewith are included *Todea-*

oides, *Whitmanii*, *Amerpohlii*, Dreer's *Robusta* and a number of unnamed sports originating with Dreer and Barrows.

A large space is devoted to ferns of which about two million plants are handled during the season and palms occupy a large area there being at present 500,000 plants in stock in various sizes.

About 100 acres are devoted to the culture of dahlias, cannas and hardy perennials. The aquatic gardens cover an area of six acres in which are grown all known varieties of water lilies and lotus; making the largest and most complete collection in existence.

EXHIBIT OF NEW NEPHROLEPIS FORMS

THE IDEAL PARK.

An address before the American Association of Park Superintendents, by Theodore Wirth.

I have often thought, of late years, that Park work would at times become almost monotonous if same required only the attention and skill to make parks attractive and keep them in good trim. Yet it was, more or less, with such a confined idea of duty and requirement, that I assumed the administrative burden of my first appointment as park superintendent.

I entered that service as a landscape gardener. Today, I proudly claim to be more, because I have found out that our parks must be more than only beauty spots in order to accomplish all the good they can in public life. I am finding, almost daily, new fields and openings for useful, beneficial service to the public, outside of the gardening profession, and all those innovations into the original plans and ideas of park work and park life, do not only not interfere or mar the beauty of the original picture and its conception, but on the contrary, in most cases they enhance the beauty of same, and in all they many-fold increase the value of the work as a whole.

Some twenty-five years ago, one of the leading park builders of the West, was engaged in designing a park system for a very promising growing city, and in reading his report outlining the plans he then submitted, one can readily see that outside of the desire to preserve natural scenery and create additional beauty spots, the full, far-reaching value of parks as a recreation grounds was at that time not fully recognized, or at least did not receive due consideration. Let me quote him as follows:

"I strongly recommend an extended system of boulevards, or ornamental avenues, rather than a series of detached open areas or public squares. The latter are certainly desirable and always form attractive features, but they are comparatively local in their character, and fail to impart such dignity and beauty as is conferred by a grand ornamental avenue, comprising a continual succession of pretty gardens enlivened by the constant passing of throngs of pedestrians and fine equipages."

Now this man at his time was up-to-date, and the sentiment and opinion expressed in those few lines show, if I interpret them right, a certain limit of the purpose and usefulness of parks, which in the last ten or fifteen years has almost everywhere been happily overstepped and widened. The local, district or neighborhood park, whatever we may call same, has come to the foreground as a most important factor to any complete park system.

New cities in planning their system give them from the beginning due consideration and thought, while older cities spend enormous sums to acquire comparatively small tracts of land for this very purpose and need, which, although always in existence, has been clearly underestimated if it has not been totally unrecognized.

The by far largest percentage of those neighborhood parks are or should be located in those parts of our cities where the population is or will become the most congested, and consequently they are the recreation grounds

Dreers Special Offer OF ARAUCARIAS

Our stock of Araucarias is exceptionally fine this season, the plants are well hardened off and if you anticipate to lay in a supply, now is the time to buy. We are in position at present time to give you much better values than after the plants are placed in winter quarters.

HENRY A. DREER, 714 Chestnut St., Philadelphia, Pa.

of the people who need them the most. Large parks are all right, but unless they are within easy reach of the poorer classes, they will be comparatively little benefited by them. Twenty-five or fifty cents are soon spent for car fare alone by even a small family for occasional visits, while they ought to be able to get the benefit of such a breathing spot at no cost, and at all times within easy walking distance.

The up-to-date neighborhood park of today embraces more than well kept lawns, attractive flower-beds, screening shrubbery plantations, shady walks and rest-inviting settees. Some of the most useful innovations are the playgrounds, in and outdoor gymnasiums wading and swimming pools, etc., and in some systems of our larger cities, we find libraries, reading, club and meeting rooms, indoor swimming pools, baths and shower-baths, etc., and the regularity with which they are visited by numberless thousands the year in and out, since their inauguration, shows convincingly that they fill a pressing demand and receive thankful appreciation.

The larger parks of most cities are equipped with bandstands, and concerts are given at frequent intervals, if not every day during the summer season. Those concerts ought to be free to everyone everywhere, but I want to go further than that and say that such concerts ought to be given at such neighborhood parks as often as possible. Of course it will be impossible, and it is by no means necessary, that such concerts be given every night, but if they could be had one a week or so, it would give a lot of pleasure and untold happiness to a class of people who have not the time nor the means to attend such concerts in parks far from their homes. Such musical entertainments bring together all the families of entire neighborhoods. They will come, young and old, and they will feel that in their neighborhood

park, they have an institution that is worthy of their appreciation, support and care. They will look forward to those concerts as a large joyful family gathering and they will go home each time happier and elated, because we are all susceptible to the tender, inspiring influence of music and forget, under same, our cares and worries, and become happy and joyful. It will bring the love for music to every home and make them happier; it will mean

THEODORE WIRTH

musical education for the masses for the love of music itself.

Such concerts in local parks do not call for an extra large expense, for it is not necessary that each park be equipped with a costly bandstand; in fact such structures may well be avoided, for they are, under the very best conditions, no ornament to any park. The main thing is a well organized band of good musicians who are willing to play wherever the bandstand is erected. The latter can be

moved from park to park, and need not be very cumbersome.

We have tried the experiment of such free concerts in our small parks in Minneapolis this season.

It has been a constant pleasure to me to observe the enthusiastic enjoyment of the music by the thousands who have attended every concert. This is particularly true of those given in outlying parks, in parts of the city remote from its center of entertainment, populated by people whose income will not permit the expenditure of much money for amusement, and whose undirected tastes would lead them to spend what little they might afford on entertainments of mediocre if not of debasing quality. The free concerts have temporarily depopulated the neighborhoods in which they were given. Everyone came to the park to hear the band—fathers and mothers, grandfathers and grandmothers, young men with their sweethearts and innumerable children in assorted sizes. Their attention to the music was closer than that of the more cultivated audiences at Lake Harriet, their applause more enthusiastic and their pleasure franker and more apparent. Sordid cares were forgotten under the spell of outdoor music on a summer night. The programs have been of standard and light music and many of the standard works have proved themselves favorites.

The chief purpose of the concerts, of course, has been to impart pleasures, and in this alone they have repaid over and over again the expense of giving them. They will have, furthermore, two secondary or future effects, which cannot be calculated, but which may be considered as interest on investment. One of these is their educational and refining influence, and the other is the popularizing of the parks by bringing to many people a first realization of their beauty and of their resources as places of recreation.

NEWS OF THE CLUBS AND SOCIETIES

MASSACHUSETTS HORTICULTURAL SOCIETY.

Two exhibitions are scheduled by the Massachusetts Horticultural Society for the first week in September. The first is the dahlia show, which will be held at Horticultural Hall, Wednesday and Thursday, September 4 and 5. From the widespread interest in this popular flower it is safe to say that this exhibition will surpass anything ever seen before in this country, as entries have been made by the principal commercial and amateur dahlia growers of New England. In addition to dahlias there will be also fine displays of seasonable flowers, fruits, and vegetables. This exhibition is free to all and will be open Wednesday from 12 m. to 6 p. m., and Thursday from 10 a. m. to 6 p. m. The second exhibition of the week is the annual exhibition of the products of children's gardens. This will be held Saturday, September 7, from 12 to 4 o'clock. Numerous prizes are offered for collections of flowers and vegetables from school gardens. It will be an unique and interesting display.

WM. P. RICH, Secretary.

LACHINE (P. Q.) HORTICULTURAL SOCIETY.

A very successful flower show was held under the auspices of the Lachine Horticultural Society in City Hall. A large gathering of friends attended, and strong encouragement was accorded by the people of the town. The formal opening took place on August 22 by F. D. Monk, M. P., and A. J. Dawes, president of the Lachine Society. The society was congratulated on the fine exhibition presented, and deservedly so. The competition was larger, better and keener than formerly. The honors in the professional section were contested between Messrs. C. McHugh of Forest and Stream Club; Joseph Bennett, florist; G. Vreugde, gardener to Mr. C. M. Hays; C. A. Smith, gardener to Mr. E. A. Dawes; E. Pewtress, gardener to Mr. Allan; J. Edwards, gardener to Mr. Pepin; A. Cole, and others.

The list of the amateurs is too long to be reported, yet the following gentlemen should not be omitted for their large and good exhibits: Messrs. F. S. Watson, F. J. Church, J. Bartlett, B. Massie and K. Robinson.

FLORISTS' HALL ASSOCIATION OF AMERICA.

At the annual meeting of the Florists' Hall Association on Thursday, August 22, at Philadelphia, the old officers were re-elected. The new directors chosen were H. G. Tull and John T. Temple.

PASADENA GARDENERS' ASSOCIATION.

On the evening of August 16 the members of the association met at the home of Mr. Cooledge. They were invited to inspect the many different varieties of tropical and sub-tropical fruits grown out of doors, among which were eleven varieties of grapes. The subject of magazines or papers for gardeners was laid before the body and as a paper for Southern California has been long talked of, it was decided to issue a monthly paper. "The Pasadena Gardens" was the name selected and the initial number will be issued about December by the Association. Messrs. Blake, Campbell and Cooledge were appointed to raise stock subscriptions. Considerably over \$5000 has been secured.

SOUTHAMPTON HORTICULTURAL SOCIETY.

The regular monthly meeting of this society was held on August 12, President Clark in the chair. Vice-President Halsey showed a fine collection of flowers. Mr. Griffin, gardener to Mr. Howard Townsend, showed fine Carmen No. 1 potatoes, and explained his method of culture. The subject of using Bordeaux as a spray for potatoes was ably discussed and the majority seemed to think the only way to have success in potato growing in this climate was to use it. The question box brought out the usual interesting exchange of opinions. The next meeting will be on September 9. The society will hold a flower show on the afternoon and evening of September 4.

U. G. AGER.

CLUB AND SOCIETY NOTES.

Charles E. Meehan will speak before the Philadelphia Florists' Club on September 5 on "The Philosophy of Wholesaling."

The Wappingers Dahlia Society hold their seventh annual exhibit in Park Hall, Wappingers Falls, N. Y., September 20 and 21.

The first annual exhibition of the Southampton Horticultural Society will be held at Agawam Hall, Southampton, L. I., on September 4.

The premium list of the Newport Horticultural Society for their autumn exhibition, September 17-19, in Masonic Hall, includes attractive cash prizes and a silver cup from Henry A. Dreer Co.

Announcements of the ninth annual exhibition of the Tarrytown Horticultural Society are issued. The list includes twenty-six special classes and sixty-five others. November 6-8 are the dates.

The Society for Horticultural Science will hold its fifth annual meeting at the Jamestown Exposition in connection with the American Pomological Society, September 24-26. The single

topic of plant breeding will be discussed.

At the annual fair of the Rensselaer County Horticultural and Agricultural Society (N. Y.), which opened on August 21, one of the most attractive displays was the flower show under the management of Mr. and Mrs. I. Cipperley, which was made in a large tent.

The Springwater Floral Society, N. Y., held its first floral carnival on August 13 and 14. Fine displays of gladioli and sweet peas were made by E. A. Higgins and Chas. Larrowe. The Wadsworth silver cup for the best garden display was awarded to Mrs. Minnie Amos.

third annual exhibition of the Nassau County, N. Y., Horticultural Society, to be held November 6-8, has been issued. The premium list includes a silver cup from the F. R. Pierson Co. for twenty-five Winsor carnations and a silver cup from Scott Bros. for fifty carnations arranged for effect.

At a meeting held at Hotel Marion, Little Rock, Ark., on August 16, the Arkansas State Floral Society was organized and officers elected as follows: pres., J. J. Mandlebaum; vice-pres., J. F. Letton; G. B. Tucker; secy., G. R. Brown; treas., W. P. Pollock. It was unanimously decided to hold a chrysanthemum show November 14-16.

The Field Naturalist Society of Central Falls, R. I., held their ninth annual flower show on August 24. The exhibits were extensive and many prizes were awarded. The Lawton silver cup for the neatest flower bed was won by Job Tyrrell; the Star Dahlia Gardens also took several prizes. The judges were William Appleton, A. H. Johnson, and W. B. Canning.

FLOWER MARKET REPORTS

BOSTON Extreme quiet prevails throughout the flower and plant trade at present. Calls are very light for local use. The demand from out of town is normal for the season, and from the standpoint of the wholesale shipper things are progressing very satisfactorily. There are no carnations in this market. Asters, which were expected to fill their place, are a disappointment, excepting those grown on low damp land, which are superb, while those grown in ordinary locations are shriveled up by the dry weather, which means a serious shrinkage in the summer income of many growers. Of roses there are not sufficient of the higher grade flowers to supply the demand, but there is an unwelcome surplus of third-rate stuff, which nobody wants. Out-door summer flowers generally are miserable. Not for many years has the garden product suffered so severely from drought.

BUFFALO. Business brightened up considerably the past week especially in the line of fancy asters and red roses. The effect of the very dry season on asters is shown in the short stems and small flowers. The best grades have moved well while the short and ordinary were quite plentiful. The new crops of roses are improving daily and the demand for the past week has been for Brides and Beauties. While blooms at the former were small they sold well as not enough Kaisersins could be had. Pres. Carnot, Richmond and Killarney were rather scarce though enough to go around. Gladioli are coming in more abundantly but only mixed colors, and so far have sold readily. Sweet peas are about over while lily of the valley is of excellent quality. Greens of all kinds are plentiful.

NEW YORK The last week of August finds the market unruffled and nothing to indicate an immediate resumption of activity. Of all classes of material there is enough and to spare excepting only cattleyas, which are being called for in quantity by Newport and other summer resorts where gaiety is at its zenith preparatory to the fall scattering. American Beauty roses are improved in quality. Asters are superb as sent in by growers who have kept pace with the wonderful development of this flower in recent years. Blooms rivalling the chrysanthemum in size and finish and with straight stems two feet long are not uncommon. Dahlias are multiplying and some very nice blooms of the cactus type are in the market. The principal occupation of the Twenty-eighth street fraternity and the visitors and customers in the wholesale marts this week seems to be congratulating Mr. Traendly on his elevation to the presidency of the S. A. F. Mr. Traendly's colleagues look upon the honor as one in which the entire wholesale section has a share.

PHILADELPHIA. The chief feature of the market here last week was the marked improvement in the quality of the aster crop. These are now coming in in great variety and abundance and of gilt-edge quality. American Beauty roses are also improving and the gladiolus crop is at its best. Next week we expect good dahlias. Sweet peas are about over. Other crops about normal.

NEWS NOTES.

The Perth Floral Co., Mason City, Ia., lost \$2,000 by fire on August 20.

A new flower store will be opened next month in De Kalb, Ill., by H. A. Vent.

McKenna & Son have opened their branch store in Bennett Theatre, Montreal.

H. Akelman, Montreal, has made improvements to his house, adding also a small side place.

At the greenhouses on the Shaw farm, Belmont, Mass., a chimney 100 feet high is being erected.

Fred B. Worthen of Augusta, Me., has taken a position with the Western New York Nursery Co., Rochester, N. Y.

It is stated that the cranberry crop in Massachusetts has been seriously affected by the continuous drought, and the result will be higher prices for berries this fall.

William Rick proposes to make application on September 10 for charter of incorporation of the Deeds Floral Co., Shillington, Pa., to be capitalized at \$5,000.

H. D. Crosby of the firm of Franklin & Crosby, Brooklyn, Ct., has purchased the Danielson estate in Putnam, and it is reported that he will establish a nursery there.

George Neismeyer of Pittsburg, Pa., while bathing in the city swimming pool, was run down by a steam launch and seriously injured. He was taken to the city hospital.

The premium list of the third exhibition of New York City's Interborough Fair is received. Liberal premiums are offered on cut flowers and plants. The prizes are offered in three classes: professional open to the world, Richmond Borough professional and Richmond Borough amateur, equal to all three classes. Last year's display was so large that it was decided to increase the amount of premiums on dahlias and on display of potted plants. Over \$1,200 in premiums was paid out last year and there will be nearly double the amount to distribute this season.

You will find something worth reading on every page of HORTICULTURE.

Obituary

Thomas J. Johnston.

Our columns recorded last week the sudden death of this genial Providence florist, but there was not time to engrave his portrait for that issue.

THE LATE THOMAS J. JOHNSTON

We present the portrait now, knowing that it will awaken reminiscences in many hearts where Tom Johnston always held a large place. "None knew him but to love him."

Other Deaths.

James Shackell of Bayside, N. Y., born at Bath, England, in 1839, died on August 18. Although at one period he conducted a retail store at Broadway, Fifth avenue and 23d St., New York, the greater part of his time has been spent as a manager of private estates. He leaves a widow and two daughters, one the wife of Joseph Millang of the N. Y. Cut Flower Co.

E. P. Bosworth, a local agent for a nursery company of Rochester, N. Y., was stricken with heart disease at West Derry, N. H., and died almost instantly. He was about 60 years old.

INCORPORATED.

Florists' Album Co., of Boston, has been incorporated, with capital of \$50,000, by S. E. Blanchard, G. N. March, F. N. March.

BUSINESS CHANGES.

C. Bradley of Elwood, Ind., has purchased the greenhouses at Tipton, conducted by Thomas Weakley.

HELP WANTED

HORTICULTURE needs a wide-
awake representative in every town
in the land. Good commissions paid
on advertising and subscriptions. If
you are ambitious, write for terms.

WANTED—A man to take charge of the
growing of Roses, Carnations and other
plants usually grown in a retail estab-
lishment. First class references required.
State wages and experience in first letter.
About twelve thousand feet glass. F. G.
Danforth, Skowhegan, Me.

WANTED—By middle of September,
young man of refinement and good address
as clerk in florist's store in suburb of Bos-
ton. Will be required to purchase stock
and have general charge of store. First
class references required. Address P. O.
Box 3657, Boston, Mass.

SITUATIONS WANTED

SITUATION WANTED: As foreman
where full charge is given. Twenty years
all-round experience both private and com-
mercial. Good grower of cutflowers, pot
plants and nursery stock. 32 years old.
A hustler. Good wages expected. Can
furnish good references. No drinker. Please
state wages in first letter. L. H. Wise,
Summit, N. J.

FOR SALE

FOR SALE—One of the best paying truck
farms in New York state will be sold at
a bargain and on easy terms. 126 acres,
fine buildings, large greenhouse, strawber-
ries, asparagus and rhubarb in bearing.
Best location; 2 1-2 miles from best of mar-
kets. Mrs. C. H. Carr, Saratoga Springs,
N. Y.

A hot water ARCO Boiler capable of
heating 2,300 square feet. Will be sold
at half price. In perfect running order
and guaranteed for one year. Reasons for
selling—too small for our increasing busi-
ness. Address S. S. Pennock-Meehan Co.,
1608-18 Ludlow St., Philadelphia, Pa.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTI- CULTURISTS.

Report of E. L. Pierce, State Vice-presi-
dent for Massachusetts, East.

It is with pleasure that I present
herewith a brief report of horticultural
progress in Eastern Massachusetts dur-
ing the past year.

From my various sources of in-
formation and comparison I cannot re-
port trade conditions as favorable or
as prosperous as in the previous year.

While on the whole the past year
may be considered an average one, the
severity of the past winter and the
lack of sunshine during the early
spring has had a material effect on the
volume of business transacted.

The tightness of the money market
the past year has also affected the re-
tailer as well as the commercial
grower, and both have experienced
some very slow collections, which is a
decided handicap in the conducting of
any business.

Easter coming so early found many
of the growers with their stock not
ready for market while those fortunate
enough to have their blooms ready were
able to realize good prices. Not only
the early date of Easter, but the pre-
ceding weeks of cloudy weather had
a decided effect on the quality as well
as the quantity of marketable stock.

The season for pot-plants and bed-
ding stock was a most backward one,
although I believe more than an aver-
age local crop was grown and in most
cases satisfactory prices realized.

The seed trade, as reported by sev-
eral of the leading merchants, has been
up to former years, although the sea-
son has been a long-drawn-out one.
The season for this class of goods
opened as usual, but the bulk of the
business was done fully a month later
than in previous years.

In perennials and shrubbery the
trade report a decided increase.

The season has seen some changes
in the ownership and management of
several establishments and one or two
new commercial places have made a
start in a small way.

An average amount of new glass has
been erected in Eastern Massachusetts,
and many of the older establishments
have been put in modern condition,
both on commercial places and private
estates, but there has been no par-
ticular boom in this line.

I am justly proud of the Gardeners'
and Florists' Club of Boston, which
now has a membership of over 350, and
today is one of the foremost clubs of
its kind in the United States.

I would especially mention the good
work this club is doing in the way of
promoting harmony and good fellow-
ship among its members, as well as
the valuable information and knowl-
edge obtained by attending its meet-
ings.

The classes in landscape gardening
instituted by the club may be mention-
ed as one of the many opportunities
offered its members.

The outlook in nearly all lines of
business at this time is less favorable
than a year ago, but the prospect for
an average year for the florists is par-
ticularly bright.

?

**Is Your Name In The Above
List? If Not, Why Not?**

MODERN GREENHOUSE CONSTRUCTION.

(A paper read before the Canadian Horticultural Association at London, Ont., by F. R. Pierson.

The question as to the best style of greenhouse construction is a most important one. As our business has widened and developed the same necessity for increased facilities has taken place as in other mercantile lines. The ocean steamer of twenty years ago bears about the same relation to the leviathans that are now being built, as the small greenhouses of twenty years ago bear to the large structures that are now being erected, any one of which is as large and covers as much ground as was covered formerly by an entire establishment comprised of eight, ten or more houses. In the earlier days of our business a number of houses was not only desirable but necessary, but in our business as in other branches of trade, we are fast becoming specialists growing one kind of flowers or plants and these in immense quantities. So as conditions have changed—the size of the buildings has naturally increased. Twenty years ago 11 ft. houses were in the majority, then came the 3-4 span 18 to 20 ft. in width; in fact, fifteen years ago when we built a new range of four iron houses, 20 ft. in width and 300 ft. in length, it was considered a model range and was much in advance of anything that had been built up to that time. Visitors came from everywhere to inspect it. But times change and change rapidly and it has been duplicated to such an extent in the meantime that it has long ago become commonplace. At that time, however, these light houses were much in advance of the houses in general use, but with the increase and growth of the business and as the necessity for larger houses became apparent, came what has come to be known as the "ridge and furrow" open construction.

For economy in construction and returns on the investment these are undoubtedly more economical and profitable than the 20 ft. separate east and west construction. This style has recently been greatly improved in details by the use of light iron gutters, increased height of the gutter line and the use of larger glass requiring less sash bars, the use of light trusses or posts increasing the width of the houses, making an admirable structure and capable of indefinite extension only limited by the quantity to be grown of one product. This style has many champions and fine examples of it can be seen in the immense establishment at Brompton and in other Canadian cities—Toronto, Ottawa, etc.,

and it has been adapted very largely in the vicinity of Chicago where immense ranges have been and are being built. But I believe that the old idea of single separate houses running east and west and greatly enlarged in width is preferable to this type of house; of course, I am speaking from the standpoint of the cut flower grower to whom sunlight in the short mid-winter months of December, January and February is at a premium. For plant-growing, of course, especially palms and foliage plants, the ridge and furrow open construction is ideal, but for cut flower growing, I consider the wide separate east and west house immensely superior, as these houses certainly get much more sunlight especially in the short mid-winter days. In fact this is wherein their superiority exists, and as this is the season of the year when flowers command the highest prices it is of the most importance to the grower that he gets every bit of sunlight that can possibly be secured. Such a season as we have just experienced makes this doubly apparent.

The argument in favor of the construction of the ridge and furrow open construction has been that it costs less to build and for the money expended the results obtained were in its favor, but by increasing the width of the east and west single house this advantage disappears. In contemplating a large addition to our establishment last year, I went into the comparative cost of the two styles and obtained estimates for exactly the same area and while the single east and west house was the very best style of flat rafter steel construction and the ridge and furrow was of the semi-iron construction only, I found there was only 6 per cent. difference on the total investment in favor of the ridge and furrow construction—a difference so small that the variance in one week's crop at the Holidays might offset the entire extra cost. With the question of cost settled, I think the advantages in favor of the single wide east and west house unquestionable; not only is much more sunlight obtained in the short dark mid-winter days when the sun is at its lowest meridian, but much more ventilation can be given; in fact, I have been surprised to see how much is necessary in the coldest mid-winter weather when other houses could be given little if any, of course, this adding to the general health of the plants, giving stronger stems and increasing the quantity of flowers. Take a dull dark winter such as we have just passed through and the importance of this is better appreciated, for it is a well settled fact that the more air than can be given the better for the plants. It is then that the advantages of this type of house is seen at its best. We get better ventilation in these houses in the summer also as the side ventilation is a great advantage, making the houses airy and cool.

Some have thought that these high houses would be difficult to heat. On the contrary, they are much easier heated than the smaller and lower houses. It is not the volume of air

that costs to heat, it is rather the amount of glass exposed to the outside air and there is little if any more exposure in these houses than in the connected ridge and furrow ones. In fact, the larger volume of air in these larger houses cools slower and is subject to much less fluctuations. This large volume of air is also a reason why more air can be given in these houses in zero weather than can be given in the smaller and lower ones.

So far as cost of operation is concerned, I see no advantage in either. The single large house can be built as large as one needs, as large as there is any advantage in. We are building now 56 ft. in width but there is no reason why that cannot be greatly increased if one wishes to—say 75 or even 100 ft. in width, but, of course, the greater the width the higher the ridge would necessarily have to be. In commencing a new range several years ago we started 56 ft. in width and will continue that for the present at least for the sake of uniformity, but there is no other reason for not increasing it, yet little would be gained, for we now get about all the economy in operation possible, the only advantage being a possible very slight decrease in cost of construction.

We have all been interested in the monster house erected this year at North Wales, Pa.—154 ft. in width I believe—and admire the faith and enterprise of its projectors, but I fail to see any special advantage in such extreme size. In this case, in order to avoid an excessively high ridge a very flat roof has resulted which I consider very objectionable, both on account of the liability of drip in rainy weather and also from the lodgement of snow in winter. The roof being so flat I doubt if the snow would slide off of it readily. So while I am advocate of the single wide house there are limitations to be reckoned with, and reasons for not building to such an extreme width. In advocating the single wide house, I speak from experience, as we have several ranges of the most modern and perfected type of ridge and furrow connected houses as well as the large wide separate houses. We are now building the latter type and believe fully and unqualifiedly that they are the best type of house, all things considered, for the cut flower grower. These light airy steel structures with reinforced concrete sides such as we are now building, eliminating all wood work except the sash-bars and ventilating sash, offer little or no obstruction to the light. It is really getting back to first principles and is following out the same principle that the market gardener who is dependent on sunlight only, is compelled to observe in placing his cold frames, so that I think all will agree with me that an east and west house facing south gets much more sunlight than the connected ridge and furrow house. There is an all too prevalent idea among florists that the temperature of warmth is the necessary factor but that this is not so is shown most conclusively in the dull winter days when the growth becomes weak and the plants stop blooming. It is the province of the florist to aid nature and the house that will admit the most sunlight, other things being equal, is the better style of structure.

863,999. Steam Plow. James Joyce, Jr., Sikeston, Mo.

A VALUABLE INSECTICIDE.

Wilson's Plant Oil, put up by Andrew Wilson, Summit, N. J., is rapidly acquiring a big reputation as a scale-killer for use on decorative plants under glass. Many prominent growers about New York City, as A. Herrington, Bobbink & Atkins and George Skene, are unstinted in their praise of its virtues, as are also a large number of growers in other sections.

H AND O

WILL IT BURN SOFT COAL?

When a man asks us that question about our boilers, we understand him to mean, are all surfaces easy to get at, to clean. It is the gum and soot which collects so rapidly on the fire surfaces, that decreases the efficiency of a boiler. Look at the interior of the corrugated — could anything be simpler to clean? The sectional has separate clean out doors to each flue, so that settles that question. The rest is told in a brief, right to the point way in the new catalog. Send for it.

HITCHINGS AND CO.

GREENHOUSE DESIGNERS AND BUILDERS.
Manufacturers of Heating and Ventilating Apparatus.

1170 Broadway,

NEW YORK.

FORGETTING COSTS

Every time your employe forgets to let the air out of the pipes, all circulation in that run of pipes is stopped — your pipes are cold.

It's bad enough to chill the plants, but there's your coal burning just the same — and *no return*.

Our Automatic Air Header never forgets — so don't forget the Automatic. Send for catalog.

We make every part of a greenhouse but the glass. We sell any part.

Lord & Burnham Co., Greenhouse Designers and Manufacturers. New York Office, 1133 Broadway, Corner 26th Street. Branches: Boston, 819 Tremont B'd'g. Philadelphia, 1215 Filbert Street.

With U-BAR GRAPERIES

the side glass is carried down to the sill, which is placed just above the grade line. This gives a graperies, that in connection with the wide glass spacing and extreme lightness of the entire construction, is almost like growing grapes outdoors, as far as light and sunshine are concerned. The curved eave, the wide glass spacing, and mildewless aluminum paint finish are points that go to make U-Bar graperies the perfect graperies they are. Two interiors and several exteriors of graperies are shown in the new catalog. Send for it. **Pierson U-Bar Company**, Designers and Builders *U-Bar Greenhouses*, Metropolitan Building, Fourth Ave. and 23rd Street, New York.

The combining of roof bar and rafter in one makes possible the only successful curved eave.

Horticulture's Advancement

The study of horticulture in the public schools is caught with the most salutary consequences to the rising generations. The promoters and abettors of the science of horticulture are public benefactors, if only for this consideration, but their action is of a still wider scope in its effects upon society.

By improved methods of culture the earth is made much more productive, and by well directed scientific effort new and improved varieties are produced, thus rendering the life of animals more salutary and pleasant. Again, a proper knowledge of this profession makes it full of interest to those who make their living by it and assures success in the results of various operations which, practiced without knowledge of and attention to details, would prove failures.

The scathing article in the issue of HORTICULTURE of Aug. 17, 1907, page 201, was well deserved. "Job" must indeed have needed some education if he failed to appreciate the herculean work of the great Swede who made popular the science of botany and placed horticulture upon a footing it scarcely ever could have occupied without a system of plant classification founded upon the genital parts as a platform. That Linnæus did not make the world more pleasant to live in," is a proposition almost too absurd to notice. He not only made it more pleasant but he did more to add to the intellectual, moral and material welfare of his fellow-men for all time than the hero who sought "the bauble of reputation e'en in the cannon's mouth."

He won a peaceful victory by bringing order out of chaos, and systematizing what must have been utter confusion and making popular a study which by its fascinating problems was well calculated to appeal to the intelligence of its votaries and improve their condition mentally, socially, morally and financially, thus making them better men and women and therefore happier. The leaven soon worked. When Linnæus died in 1768 the species of plants actually described were about 1000 and now they number at least 100,000.

As the study of botany became more general the desire to possess living specimens on the part of the wealthy became also more pronounced. Enterprising professional horticulturists sent collectors into various parts of the world in search of novelties, and many of the tropical plants remarkable for their beauty or some peculiarity of growth graced the hot houses of rich enthusiasts. New tropical fruits and exotic vegetables were also added to the luxuries of the table and many were brought into cultivation, while others, by means of the now rapid means of communication and transportation, are imported in enormous quantities.

The Royal Botanic Gardens at Kew were the first to arrange their specimens under the Linnæan system and give the Linnæan specific names. Sir Joseph Banks contributed large donations of exotics and Mr. W. T. Aiton, gardener to His Majesty George III, edited a

work in 1814, "Epitome of Hortus Kewensis" which is a catalog of the collection under the classes and orders of the Linnæan system with the common name, native country, when first cultivated, time of blooming, whether annual, biennial or perennial, shrub or tree, if hardy or half hardy, greenhouse or stove, if found growing in ordinary soil, bog or water. This collection, started in the latter part of the eighteenth century has been kept up and greatly increased until the present time and is one of the greatest botanical institutions of the world.

The taste for horticulture having been encouraged since the beginning of the last century has progressed by leaps and bounds until it has reached what we may call gigantic proportions and given pleasant and profitable employment to thousands of deserving families. Perhaps there is no better proof of the important stand the science has taken in the community than that it has made the profitable publication weekly of HORTICULTURE a possibility and the enthusiasm and enterprise with which it is conducted a public benefaction of no slight importance to society. Its advertising columns are a continuous record of the great value the culture and dissemination of flowers has assumed in the commercial world.

The great convention of American florists just held at the city of Philadelphia under the presidency of the editor of this periodical is another proof of the ascendancy of floriculture. The addresses delivered on that occasion were well calculated to fill the public mind with a due appreciation of the stand the florists have taken as a body as philanthropists, working not only for their own aggrandizement but for the good of the country.

All sensible citizens will see the advantage of strengthening the hands of the executive in this matter of teaching horticulture in the public schools. The legislators of Massachusetts are to be congratulated for the steps they have taken this summer in providing so liberally to teach the teachers how to teach agriculture, at Amherst, and it is gratifying to note that the movement was so popular with the teachers that more than four times as many attended as was expected. There is evidently a great revival in the love of scientific farming and gardening. Let us keep it up.

Geo. A. Moore

Our Frontispiece

We present as a frontispiece this week a view in the garden of Mr. H. Heaton, an enthusiastic amateur of Amherst, Mass. It well illustrates the value of an open stretch of lawn and is an example of good arrangement which might serve as an object lesson to many planters who fail to keep this essential point in mind. The tree on the right is a red oak. Others will be recognized as weeping beech and Colorado blue spruce.

Japanese Maples

The increased culture of Japanese plants during the last two decades has been most marked in England coincident indeed with the rise of Japan as a world power. And while Japan assimilates western methods, we in turn are indebted for many beautiful products of that fairy land of gardens and flowers. Iris Kœmpferi, lilies, pigmy trees, bamboos, have each had exceptional patronage the last few years. The introduction of Japanese maples was an acquisition to western gardens; they may be said to epitomize a gifted people especially as embodiments of things artistic, rivaling many stove plants and the most delicate ferns in gracefulness of outline and beauty of foliage. The attempt to grow them in England in many districts has been successful and there are few gardens of note without specimens of these beautiful deciduous plants. Prominent nurserymen have taken them up with enthusiasm and the large groups exhibited outside at the Temple show have for years illustrated their utility as decorative subjects. So exquisitely delicate are they in appearance that invariably the first question asked is "Are they quite hardy?" It may frankly be said that many grown for exhibition are brought on in cold greenhouses but that is on account of the early date of showing which hardly gives time for requisite hardness of foliage outside; as cool greenhouse plants in pots they are very effective and admirable as small plants for table decoration. *Acer palmatum polymorphum* may be seen in large plants in a well-known North of England nursery. A few of these were lifted for a London exhibition, the sequel being a large order for specimens to form an avenue for a south country millionaire. It may be safely said they are hardy in the south and in sheltered and favored parts in other districts but the more delicate varieties in the north need protection in severe winters; if in pots deeply plunged a little canvas is all that is necessary. In grouped beds they are effective but as isolated plants with a green lawn as setting their beauty is more sharply brought out, especially as standards. For two months when the foliage is hard they are useful for cutting for table purposes.

With regard to culture they like a turfy loam and if grown in pots, with plenty of rough sand, delighting in water as they do when growing, but abhorring stagnation, syringing should be done in early morning and late afternoon. They like a cold bottom and pot plants must be plunged as a severe drying out is fatal to tender growth. A deep pit with ventilation on top and bottom both day and night is the place to bring them on in early spring, removing outside later. All pot-bound stock may be safely potted at the end of July, dead wood being removed and plants neatly staked.

With regard to propagation, *Acer palmatum* roots freely from cuttings taken in July and placed in gentle bottom heat; large plants may have a boxed bed round them and layered; if small plants are needed of choice varieties, graft them on *palmatum*. The best method with general stock is to inarch them. A house out of the way should be selected, as boxes, bricks, slates,

etc., used to bring them up to proper level, present a somewhat unstable and untidy arrangement for the time being. Varieties do not usually seed freely but this year there is an exceptional crop especially on *Japonicum aureum*. These revert, however, to *palmatum* and *Japonicum* types and make useful grafting stock. Imported plants may be had in quantity from the sales but often it is rough and stunted stock which take some time to get into shape.

There are now a large number of varieties, many of them with difficult Japanese names. The following are a select and representative dozen of form and color in *palmatum* and Japanese varieties: *Acer p. atropurpureum*, dark purple; *p. aureo-variegatum*, dark green, variegated bright gold; *p. dissectum atropurpureum*, deeply serrated leaves, fine purple; *p. dissectum variegatum*, similar to above but variegated rose and white; *p. linearifolium*, seven narrow lobes, light green; *p. roseomarginatum*, lobes deeply cut, light green margined with rose; *p. sanguineum variegatum*, five-lobed, crimson, variegated with bright scarlet, changing with age to white; *p. septemlobum*, seven lobed, pale green turning to red in the fall. *Japonicum aureum*, splendid gold; *j. laciniatum*, deeply divided lobes, light green changing to red in summer; *j. vitifolium*, foliage cut like a vine; *j. pictum variegatum*, large broad leaves, deep green with distinct white variegation.

Edgar Elvire

Overcrowding

The tendency to create botanic gardens on private estates is much too prevalent. The saying that "variety is the spice of life" is accepted as a true one, but when carried to excess as is done in many gardens, particularly under glass, variety becomes one of the most troublesome of burdens. Where subtropical and ornamental foliage plants are artistically used for bedding purposes, they combine well with the ordinary bedding plants, not however in the way we sometimes see them, but rather thinly arranged so that each plant will stand clear of its neighbor.

How often we see stove houses and conservatories with the plants all packed indiscriminately together in a sloping bank with sometimes the larger plants elevated on pots or other material, with the smaller ones all crowded underneath. Thus arranged they may look attractive from a distance, but they will not stand critical examination and cannot be regarded as evidencing either good culture or good taste. Light and air play so important a part in the life of a plant that all unnecessary stock should be dumped. Under glass where over-crowding prevails, troubles are many. Bugs of every description thrive and unsightly pots with the soil half-washed out are often found. On the other hand, when plants are so arranged that each has ample room, health and vigor prevails; better facilities are afforded for accurate judgment in regard to watering and, "last but not least," more harmony is likely to exist between the head gardener and his assistants.

British Horticulture

THE BEST SWEET PEAS

The National Sweet Pea Society has rendered a useful service in publishing a list of "too much alike" varieties. With the remarkable multiplicity of new sorts endless confusion has been caused, whilst the seedsmen's lists have reached to unwieldy proportions. After a careful investigation and the conduct of exhaustive trials the Society's Floral committee recommend the following kinds as the best in their respective colors: White, Dorothy Eckford and Nora Unwin; crimson and scarlet, King Edward and Queen Alexandra; rose and carmine, John Ingman; yellow and buff, Mrs. Collier; blue, Lord Nelson and Romolo Piazzani; blush, Mrs. Hardcastle Sykes; cerise, Coccinea; pink, Countess Spencer; orange shades, Helen Lewis and Henry Eckford; lavender, Lady Grisel Hamilton and Frank Dolby; violet and purple, Duke of Westminster; magenta, George Gordon and Captivation; picotee edged, Dainty; fancy, Sybil Eckford; mauve, Mrs. Walter Wright; maroon and bronze, Black Knight; striped and flaked (red and rose), Jessie Cuthbertson; striped and flaked (purple and blue), Sutton's Marbled Blue; bicolor, Jeannie Gordon; marbled, Helen Pierce. The following awards were made at the Reading trials: Saint George (Messrs. Hurst & Son), silver medal and first-class certificate. This was regarded as the best novelty of the year. Helen Pierce (Henry Eckford), first-class certificate; Princess Victoria (Dobbie & Co.), Nora Unwin (Watkins & Simpson), Lord Nelson (I. House and Son), and Prince Olaf (Dobbie & Co.), awards of merit.

NOTED SPECIALISTS

Essex is a famous seed growing county, a large acreage being devoted to this purpose. H. Eckford, of Wem, has now secured a seed farm in the Burnham district. Messrs. Dobbie & Co., of Rothesay, have a very extensive seed farm at Marks Tey, near Colchester, under the direction of Mr. W. Cuthbertson. Here are cultivated a comprehensive selection of sweet peas, including the latest novelties and some new varieties not yet in commerce. The latter comprise Princess Victoria (There is an old variety of this name which has now been entirely superseded); Prince Olaf, which received an award of merit from the National Society, a blue striped variety; The Marquis, a waved mauve of an attractive form; Minnie Christie, a plum-colored waved variety, with wings of a more brilliant tint; Fanna Dale, maroon, described as an improved Othello; White Spencer and Mrs. Ireland, waved bicolor. A variety which has attracted the attention of visitors to Marks Tey is St. George, the novelty being sent out by

Messrs. Hurst & Co. of Houndsditch. This has received the National Society's silver medal as the best novelty of the year. It is of an attractive orange tint, and is regarded as an improved form of Evelyn Byatt. An award of merit was also received from the Royal Horticultural Society at the Holland House show.

A CANNA TRIAL

This season a special feature of canna trials has been made at Wisley at the Royal Horticultural Society's gardens. About 200 varieties have been in cultivation. Awards of merit have been granted to the following by the Floral Committee: C. J. B. van der Schoot, a clear yellow flower, with red splashings and spots; C. Elizabeth Hoss, yellow, with bright red spotting and green foliage; C. Gladiator, described as the best spotted variety in the collection; C. W. Saunders, rosy-crimson with purple foliage; C. William Bofinger orange-scarlet; C. Uncle Sam. Awards were also granted to several varieties under numbers. Most of the plants were grown in pots measuring ten inches in diameter, and a splendid growth had been made. The flowers were an indication of the high standard which has been reached in the cultivation owing to the special attention paid them for years past by leading experts like Messrs. Cannell & Sons, of Swanley, Kent. This firm's brilliant groups of cannas have added an acceptable blaze of color at the leading shows, and have secured for them many honors.

THE NEW ASSISTANT SUPERINTENDENT

From the large number of applicants for the post of assistant superintendent at the Royal Horticultural Society's gardens at Wisley, Arthur C. Smith has been selected. Like many of the most successful gardeners, Mr. Smith received his training in Scotland, where his father was head gardener at Dormont. On migrating southward, Mr. Smith was in the service of Sir John Ramsden at Byram Park, Ferrybridge. He was next engaged in the gardens at Brayton Hall, Cumberland, the seat of the late Sir Wilfrid Lawson. Journeying from north to "sunny Sussex" Mr. Smith secured an appointment at Petworth Park, the picturesque seat of Lord Leonfield. Subsequently he was employed at a number of equally notable places. The new official has, therefore, had a wide and varied experience, and he enters on his new sphere with an excellent record. The new gardens at Wisley afford plenty of scope for a man of Mr. Smith's attainments, and he will be associated with Mr. S. T. Wright, the superintendent, who for many years has rendered such valuable service to the Society, first at Chiswick and latterly at the Society's new Surrey home.

terstate trade in these goods is to grow as it should but of even greater importance is the assurance of careful handling and quick delivery. The express companies can, if they are so disposed, do much to foster this class of business. As a general thing we believe that they have done so and many plant and flower shippers have found the officials and employees of the company serving them to be actuated by an earnest desire to please and oblige. Where the reverse is true it is not unlikely that the announced intention of the Postmaster General to inaugurate a parcels post will have a healthy conciliatory effect. Altogether the outlook is most encouraging from whatever standpoint we may view it.

A distinction without a difference

Certain industrious members of the S. A. F. have been struggling with the rather elusive problem of how to bring florist and private gardener together in harmonious and efficient union. To us it appears that the distinction between these two branches of horticultural activity is more in the minds of some people than in fact and this is one reason why the imagined problem is so elusive. If we will only look upon it in the light that there is no breach, that the apparent divergenec of paths is largely imaginary, that the question of whether a gardener gets his living through the sale of his products or the sale of his skill is irrelevant and that the terms "good gardener" and "good florist" are practically synonymous and interchangeable at very short notice, we shall see that all this effort which some of our friends are thoughtlessly making to segregate these two classes is both profitless and unwise. There is rarely an issue of HORTICULTURE that does not mention the change of some private gardener to a commercial basis or *vice versa* and it all seems perfectly natural, for he who is proficient in either, may safely change at will and the man who is limited in any of the essential qualifications for either is weak for the other in an equal degree.

Missionary work at the country fair

These are the days when the country fair flourishes. There is no more democratic institution in the world than the country fair. It caters to everybody, regardless of sex, age, color, temperament, religion, condition in business or society, antecedents or ambitions, and whatever a man, woman or child is interested in the country fair can put it to use. We have often wondered why it is that the florist, nurseryman and seedsman are so conspicuously indifferent to the possibilities of business in participating in these rural round-ups. Everybody goes to the fair and where everybody goes is the place of all places for the enterprising business man looking for local support to show himself and his goods. The floral and plant displays on these occasions are left, as a general thing, to the amateur of the feminine persuasion and are good examples of well-meant but sadly misdirected effort. Instead of holding aloof in a sort of supercilious self-superiority local florists might materially serve their own business interests by an enthusiastic participation in the exhibition and by encouraging through example and advice the horticultural ambitions of the neighborhood. In the occasional instances where this policy has been followed the reward has been ample. More gardens and better gardens are an essentiality to the future prosperity of those who deal in any sort of garden material and all signs indicate that the field is all ready for the missionary.

An encouraging outlook

Now that the United States Express Company have finally removed every vestige of the oppressive flower shipping rates let us hope that peace and harmonious relations may prevail throughout the country between transportation companies and the plant and flower shippers. Low rates are essential if the in-

AFTER ADJOURNMENT.

Our attention has been called to the fact that in our account of the great Holland House show some weeks since we failed to give due prominence to the magnificent display of orchids made by Sander & Sons., of St. Albans. This was the leading orchid display and won the gold medal.

New England, parched and brown from the effects of one of the most pronounced midsummer droughts experienced in many years, is revelling in a welcome rain which bids fair to save the crops, horticultural and agricultural, from the utter destruction which otherwise seemed inevitable. For once, people are taking a wetting without a murmur.

Nicotiana Sanderæ, as we suggested two years ago might happen, proves to be practically a weed in gardens where it has been allowed to ripen seed, the self-sown seed coming up in great quantities and producing flowers in all the varying shades of color found in the species. These spontaneous plants do not, however, come to the blooming period until well along into August.

They are evidently very much in earnest as to the enforcement of "Prevention of Corruption Act" in England, judging from an advertisement which appears in the *Gardeners' Chronicle* stating that the Council of the Horticultural Trades' Association having been informed that secret commissions are being paid in various quarters, a sum of five hundred dollars will be paid to anyone giving such information as will lead to the conviction of anyone in the nursery or seed trades corruptly offering or giving such commission.

The florists, in their convention, have had much to say about a plan for a national flower show. They favored the idea, but there was much difference of opinion as to the proper time of year to hold it, and the subject was finally referred to a committee. That enterprise seems too large to be concentrated at a single time or place. Even the local shows to which Philadelphia has been accustomed for years, could lose some of their chief attractions if held only once a year. The chrysanthemums could not be shown in the spring, nor the bulbous plants in the autumn; while roses from the open air would have to have an intermediate season.

Would it be too great a strain on the fraternity to hold two, or even more exhibitions each year? The growing popular demand for flowers would probably justify them, and they might be held at different places if that seemed desirable. The floral wealth of this country would easily fill a new show every month the whole year round.—*Philadelphia Bulletin*.

Very plausible. About the "strain on the fraternity" we can tell more after we have tried. When we have demonstrated that one can be made a success we can then take up the question of a few more.

BABY RAMBLERS FOR CHRISTMAS.

Editor Horticulture.—Please ask some of your experienced readers the best way to treat Baby Ramblers, so as to have them in flower for Christmas. BARYMORE.

ROYAL HORTICULTURAL SOCIETY
EXHIBITION AT VINCENT
SQUARE.

In spite of the old dictum, the expected did not happen on Tuesday, 20th ult., when only a few exhibitors appeared on the scene and the attendance of visitors was most sparse. Though some might wish to, they cannot be in two places at once so most of our regulars were away, either at Brighton or preparing for the grand fete at Shrewsbury, the last now being the biggest show of any held in the Provinces, while as regards attendance it stands unique, and not only do the railway companies run special trains to it, but they are compelled to meet the rush of traffic to erect temporary stations at points on their lines, running into the old town. On the second day last year no less than 70,000 passed the turnstiles in less than three hours. I should like to say this was all horticultural, but fear that the main attraction is the side shows which collect in vast and noisy numbers in and around the beautiful "Quarry" that, situated on the banks of the devious Severn, forms an ideal show-ground. The roads in the quarry are allavenued by fine old lime trees, some of the finest in England, and the scent of these in July is so powerful that those not accustomed to it are driven from their homes for a time, and the hum of the congregated myriads of bees is so great that it resembles the sound from the pedal pipes of some great organ heard at a distance. The prize schedule is on a very generous scale; to give one instance only, the grapes—the premier prize is a fifty guinea cup, plus twenty sovereigns, and the rest of the prizes for grapes and fruit, are proportionate, while the groups of plants both under canvas and in the open have valuable medals, plus hard cash awarded in a lavish manner. No wonder therefore, that the entries are numerous and that the extent of the benches for fruit alone has been measured up to a quarter mile! But I anticipate, and must leave the report of this monster show till my friend returns and gives an eye witness account of it. Opposite the entrance to the Hall, Mr. H. B. May had what might be termed a bell flower display for it was chiefly made up of campanulas, interspersed with a few choice ferns. He also had a nice lot of shrubby veronicas, well flowered, Eveline, Mont Blanc, and La Marveillance being the most notable. In front of these laid on the baize were piles of *Lapageria rosea* Nash Court yar. Pedestaled by itself in a corner, Major Holford put up a grand piece of *Lælio Cattleya* elegans, on which could be counted over 25 spikes averaging five flowers each, surely worthy of the gilt Lindley medal awarded. In the annex Veitch & Son put up plants of *Cypripedium Rothschildianum* superbians and J. H. Veitch both grand forms while Baron Schroeder had *C. Delense*, and A. de Fairese and Major Holford had six new hybrid *Lælio-Cattleyas*, all very distinct and fine.

A table across the north end of the hall was entirely filled by Kelway, with cut spikes of gladioli. Some extra fine yellows were *Canarybird Leader* and *Golden Sword*; whites, *Snow Queen*, *Mrs. F. Field*; Princess of Sweden soft salmon; *Fireflush* the best dark scarlet; *Dovedale* a lovely white and *Sea Mouse* reproducing the iridescent colors of that singular anemid if it be possible; *Lady McDonald*, richest purple, and *Edward VII*, superb soft red, must complete special notice. T. Ware & Co., put up a fine bank among which was a promising new flowering shrub *Andromeon rigidum*, with open *Monachattum*-like yellow flowers, and acute lanceolate glabrous foliage. He also had *Statice latifolia* alba, and *exquisitum*, all lovely minute forms of this useful sea lavender, and *Chrysanthemum maximum* King Edward—remarkable both for size and substance in the flower.

THOMAS BUNYARD.

NEW ROSES AT THE MANNHEIM
EXHIBITION.

Hrn. Jacobs of Westendorf, who generally shows perfect blooms, brought only his T. H. Gruss Herzogin Alexandra and his Gruss an Sangerhausen, both excellent for cutting and decorating purposes. Messrs. Hoyer and Klemm of Gruna, Dresden, showed the Bengal hybrid, *Charlotte Klemm* (raiser R. Turke of Mussen), a rose of a fiery red tint, good for bedding, that certainly has a great future.

Hrn. R. Turke showed a seedling from Xavier Oliho and Etoile de France, having the color of Gruss an Teplitz; further a number of seedlings of *Schneekönigin*, all of which showed the mother type, but were not her equal. A cross between this variety and *Rosa rugosa* alba was more fortunate, the blooms being single and pure white with the thorns and hardness of *R. rugosa* alba. The production of such a hardy race of Roses should be made the aim of the hybridist. One of the best novelties: *Radium*, a cross obtained from Mdle. Eug. Verdier x *La France*; the color is fiery red similar to *Farbeukönigin*, but the plant has more vigor; Hr. C. Weigand of Soden, showed a seedling from *Caroline Testout*, having coloring of carmine and yellow—very peculiar.

As a result of the unfavorable weather, Hr. Peter Lambert, Treves, was unable to exhibit flowers in good condition. He had in No. 6423 a flower having more carmine in the red than in the case of the variety *Liberty* and in No. 6423 in the bud, as in *Apotheker Hofer*, but more red in the color. No. 6463 had cherry-red buds of great length. No. 6465—*Caroline Testout* x *Kaiserine*—had the Jacqueminot tone, and all of these were of the Tea Hybrid class.

M. M. Soupert and Notting showed in the T. H. Madame J. W. Pudde a velvety cherry-red rose with a carmine tone and moderately full bloom, which promises to be a good rose for cutting in the autumn. No. 7 is a Tea Rose, the result of a cross between *Souvenir de Pierre Notting* x Mdle. M. Salvati, a pure light sulphur-yellow, and the only clear colored yellow rose worth mentioning.—*Horticultural Trade Journal*.

NEWS OF THE CLUBS AND SOCIETIES

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

The following letter from the counsel of the United States Express Company to the Secretary of the Interstate Commerce Commission, a copy of which has been received by the President of the Society, is self-explanatory.

New York, August 23, 1907.

Mr. Edward A. Moseley, Secretary, Interstate Commerce Commission, Washington, D. C.

Dear Sir:—We received your letter of August 21, 1907, enclosing letter from Wm. J. Stewart, President of the Society of American Florists and Ornamental Horticulturists. Mr. Stewart complains that the United States Express Company has restricted the effect of the Commission to the points named in the complaint.

We regret to say that although the question was taken up some time ago, and although the officers of the Company decided, in order to be perfectly fair, that the new rates should not be confined to the points in question, but should be extended throughout the territory involved, at points similarly situated, through a misunderstanding and oversight the new rates were not put in to effect.

As soon as we received your letter we took the matter up with the Traffic Manager, and found that through a misunderstanding he was awaiting some word from us before changing the rates. We regret very much that this has happened, for we can assure you that the Express Company did not intend to interpret the meaning of the Commission's order in a narrow manner.

We think that Mr. Stewart's suggestions are being entirely covered; if, however, his attention is called to any specific instance where the rate is not, in his opinion, according to the spirit of the Commission's order, we will have the matter adjusted if he will call our attention to it.

We return the enclosure herewith, and wish to thank you for thus calling the matter to our attention.

Yours truly,

O'BRIEN, BOARDMAN & PLATT.

This disposes finally of the controversy which has been extended over the past fifteen months and should place the United States Express Company in a most favorable light in the estimation of the flower-shipping trade. The position taken by the Company is at once eminently fair and cordial.

WM. J. STEWART, President,
P. J. HAUSWIRTH, Secretary.

Department of Plant Registration.

M. H. Walsh of Woods Hole, Mass., submits for registration the following Rambler Roses.

Walsh's "Poesy," color clear dark pink; base of the petals fading to pure white; distinct; tree flowering, strong grower; flowers borne in large clusters and hanging gracefully on the plant. This variety raised in Woods Hole in 1901.

Walsh's "Coquina," beautiful shell pink; lower half of petals creamy yellow; foliage glossy ivy green; profuse bloomer; single flowers.

Walsh's "Cinderella," beautiful dark rose; flowers double, borne in immense clusters; shoots bearing from sixty to one hundred blooms; when fully developed, flowers assume imbricated form and change to a lovely shade of light pink; one of the latest of the Rambler class to flower.

Walsh's "Delight," single flowers; intense carmine tipped with scarlet; lower half of the petals white; most profuse bloomer; flowering from every

bud on each shoot; foliage dark glossy green and a grand forcing rose.

Walsh's "Evangeline," single flower; two inches in diameter; large bronzy glossy green foliage; most vigorous grower; deliciously fragrant; color soft pink and white, suitable either for climbing or creeping in parks or shrubberies.

Walsh's "Paradise," single flowers; borne in large clusters; hardy; profuse bloomer; fragrant; petals, lower half white; upper half, pink; when fully developed the petals recurve to a sharp point forming a perfect star; centre filled with yellow stamens.

Prize Essays.

On account of the short time intervening between the publication of Mr. Murray's offer and the meeting of the Society, the Executive Committee have extended the time to September 30th.

Samuel Murray, of Kansas City, offers two prizes of \$30 and \$20 for the following essays to be presented by Sept. 30th. "Comparative Worth in the Community and to Horticulture and Floriculture."

First: The man who is a gardener and florist, having a store and conservatory in the city, conducts a high class business: has greenhouses in the suburbs; grows plants and cut flowers for his store; has a good business in spring bedding plants and does all in his power to increase the sale of hardy perennials, setting forth to his patrons on every occasion possible the beauty and charm of the hardy flower garden plants, shrubs and trees and bulbs in the fall.

Second: The man who conducts a store, and conservatory in the city, has a high class business, but does not have any greenhouses, buying all his plants and cut flowers at wholesale.

P. J. HAUSWIRTH, Secretary.

FLORISTS' CLUB OF PHILADELPHIA.

The feature of the monthly meeting of this Club was an address by Charles E. Meehan on "The Philosophy of Wholesaling". Mr. Meehan handled his subject in an able manner as will be seen from a perusal of his address which will appear in full in an early issue. Samuel S. Pennock and Fred Hahman were nominated for president for the ensuing year. The election takes place first Tuesday in October. Edwin Lonsdale and David Rust are slated for secretary. May the best men win. It is a healthy sign to see some rivalry for the respective offices. A resolution of sympathy for Joseph Hearcock on account of his recent bereavement was passed. Four new members were elected and three nominated. Robert Craig and Edwin Lonsdale spoke on the forthcoming national flower show in reply to some criticism by Adolph Fahrenwald. The ladies, bowling team headed by Miss Graham attended the meeting and took occasion to present to the club the cup they won in the convention contest. Captain Lynch favored the company with a song at the wind-up and light refreshments were served.

NEW BEDFORD HORTICULTURAL SOCIETY.

The free exhibition given under the auspices of this society in Odd Fellows Hall, during Tuesday, Wednesday and Thursday of last week (Old Home Week), received such extensive patronage as seldom falls to the lot of a provincial flower show. It is perfectly safe to say that half the time the exhibition was open, the hall was practically filled with visitors; while during Tuesday afternoon and evening the doors were kept closed and opened only to admit visitors as others made their exit. Great credit is due to Messrs. J. Garthly, W. Keith and H. A. Jahn who have worked untiringly and contributed freely of their stock in the effort to make the exhibition a success.

The cut flower part of the show was essentially an exhibit of dahlias which, owing to the early date and the grievous conduct of the weather office, was not quite up to the usual standard. Mrs. H. A. Jahn made an extensive showing and carried off the main part of the premiums in the open classes. James Garthly was awarded a silver medal for a plant of *Nephrolepis-Todeaoides*, also first premiums for group of foliage plants, group of ferns, specimen palm along with several other premiums. The groups and specimens palms and ferns formed very attractive features.

Wm. Keith of New Bedford also captured first premiums for group specimen fern and specimen cycas. Mr. Keith also had on exhibition a group which claimed a good share of attention from the visitors; consisting of a banana, orange, lemon and pine apple all in fruit.

R. & J. Farquhar & Co. contributed a bench of *Lilium auratum* and other lilies, also a bunch of Scotch heather which was of much interest, for which a bronze medal was awarded. W. W. Rawson & Co., of Boston, exhibited about 200 fine dahlia from their Marblehead farm. Exhibits of gladioli and aquatic flowers from H. A. Dreer and a fine collection of gladioli from J. Lewis Childs were generally much admired.

The judges were James Farquhar of Boston, and W. C. Winter of Mansfield.

NORTH SHORE HORTICULTURAL SOCIETY.

The annual summer show of this society was held August 28-29, at Manchester, Mass., under perfect weather conditions. The exhibition was adjudged to be the best ever held by the society. The judges were Julius Heurlin, George Gordon, and Chas. Simpkins.

The exhibit of annuals in competition for the Schlegel & Fottler silver cup was exceptionally good the cup being won by Fred Brasch, gardener to Mrs. James McMillan, with H. Shaw, gardener to Mr. Gardner Lane, second.

The special prize classes brought out fine exhibits and close competition.

Henry A. Dreer, Philadelphia, had an exhibit of aquatics, *Nephrolepis*

merpohlii and *N. Todeaoides*. Lager & Hurrell, Summit, N. J., had a fine collection of orchids. W. W. Rawson Co., showed dahlias, and B. Hammond Tracy made a good exhibit of gladioli, mostly seedlings.

F. R. Pierson Co., Tarrytown, N. Y., staged their beautiful *Nephrolepis superbissima*. Blue Hill Nurseries showed a collection of seedling perennials.

John Reilly, gardener for Mrs. M. B. Mason took many first prizes including five for asters. Bernard Reilly, gardener for Miss Bartlett, also had a big bundle of firsts as also did A. Magnusen, gardener for George N. Black, whose fern won first place as specimen plant. Wm. Swan won the Lord & Burnham cup for display of plants, the special Mitchell prize for collection of fruit and the Crafts prize for phloxes. Mrs. Leland got the Roberts & Hoare silver medal and Schlegel & Fottler special for suberous begonias. J. J. Middleton won the Thos. J. Grey prize for sweet peas. The Farquhar cup for collection of vegetables went to Mrs. Gordon Abbott, the White cup for collection of vegetables to Mrs. Phelps Dexter and a number of lesser special premiums were variously won.

Certificates of merit were awarded as follows:

Lager & Hurrell, Summit, N. J., for collection of orchids.

F. R. Pierson Co., Tarrytown, N. Y., for *Nephrolepis superbissima*.

Henry A. Dreer Co., Philadelphia, for aquatics, and also for *Nephrolepis Amerpohlii* and *Nephrolepis Todeaoides*.

W. W. Rawson, Boston, for collection of Dahlias, and also for *Gladiolus Harvard*.

Blue Hill Nurseries, South Braintree, for collection of seedling perennials.

B. Hammond Tracy, Wenham, for collection of Gladioli.

GARDENERS' AND FLORISTS' CLUB OF BOSTON—A FIELD DAY.

Saturday, August 31, furnished another in the series of enjoyable outings which have afforded so much pleasure and instruction for the club members. The trip this time was to the Bay State Nurseries at North Abington on invitation of the proprietor, W. H. Wyman. Mr. Wyman met the party at the railroad station on arrival and there were enough to fill two big vans besides sundry smaller vehicles. The visitors were first conducted to the restaurant where a good dinner was enjoyed and then the afternoon was passed in visiting and inspecting the three large tracts now being operated by Mr. Wyman and the storage and packing sheds and other appurtenances of a modern nursery business. Not only were enterprise and thorough business methods evident on every side but all were impressed with the adaptability of this section for nursery purposes as was well demonstrated in the luxuriant green and healthy vigor of everything at a time when in most sections of New England, grass, foliage and flowers are brown and withered from the effects of the long-standing drought. Especially in the case of evergreens was the congenial character of soil and environment well evidenced. The her-

baceous grounds, many acres in extent, brilliant with color, were also admired for the luxuriant health of everything. At the close appropriately enthusiastic thanks to Mr. Wyman for the pleasant occasion were vociferously voiced.

FRUIT GROWERS MEET.

Three hundred fruit growers were present at the joint meeting of the New York State and Ontario County Fruit Growers' Associations, at the New York State Experimental Station, August 28.

Charles K. Scoon, one of the prominent fruit growers of Ontario county, made the address of welcome. He alluded to the fact that while the country around the Experiment Station was not the largest fruit growing district of the State yet it had large fruit plantations and extensive nursery interests, which in connection with the Experiment Station made it a place of special interest to the fruit growers. Speaking of the Station he said that the institution had much to show of interest to the fruit grower and that the men on the staff of the institution were really the servants of the public and that if the fruit growers and other farmers had no questions to ask them they would have nothing to do. J. R. Cornell of Newburg, president of the New York association responded.

The first address on the program was on "Plant Breeding and its Importance to Fruit Improvement," by Dr. H. J. Webber, professor of Experimental Plant Biology at the State College of Agriculture, Ithaca. Dr. Webber reviewed the entire subject of plant breeding and told the fruit growers that it was not necessary to be a Burbank to accomplish something in the development of new varieties of plants. "There is nothing secret," said Dr. Webber, "in plant breeding. It is simply an interpretation and application of natural laws and these laws are so simple that any one can understand them. All plant breeding is based upon the fact that all individuals are different. In the human family individuals are all different and this is just as true among plants. This fact has been taken advantage of in the development of the tomato and the sugar beet. In the case of sugar beets they select the plants with the largest sugar content and breed from them. These men have simply taken advantage of individual characteristics and breed the plants in such a way as to develop same."

In connection with his address, Dr. Webber exhibited a number of varieties of Timothy hay, which was of marked interest to the audience, as it was generally supposed that there was only one variety of Timothy.

The next address was by Prof. N. P. Hedrick, horticulturist at the Station, on the "Hardiness of the Peach," in which he gave results of an investigation along that line conducted by him in Michigan and New York. The data has wide practical value to the growers of peaches.

The session was concluded by an address by P. J. Parrott, entomologist at the Station, in which he explained the work the Station was doing and called attention to a number of things that would be of interest to the fruit growers.

H. R. PEACHEY.

HARDY SHRUBS—PLANTING AND TREATMENT.

A paper read by S. C. Moon, Morrisville, Pa., before the Society of American Florists.

Acknowledging without much preamble the distinguished compliment of being invited to address this intelligent audience, on a subject with which you are already familiar, I will assume that we all understand, by the term "hardy shrubs," the class of perennial bushy plants, deciduous and evergreen, though largely deciduous, which are used for ornamenting lawns and gardens. Though mostly of moderate size when planted, some of them eventually attain the proportions of small trees. The term hardy will vary with the location of the planting, but will not materially affect the suggestion here presented. How to plant them will be considered in a two-fold light. First, the distribution and arrangement of the plants on the lawn, and second, the method of setting the roots in the ground.

As a general rule, the most effective way to plant shrubbery is in masses with not too much variety in one group. Prof. Bailey says: "The shrubbery masses should be placed on the boundaries; for it is a fundamental concept of landscape gardening that the centre of a place shall be open. In most places the mass or border planting should be the rule and the isolated specimens the exception; but unfortunately the rule is usually reversed." It is easy to see conspicuous evidences of the truth of the above statements in almost any suburban neighborhood in examples of good and of poor arrangements. (See our frontispiece.)

Many planters seem to think it desirable to have a well developed plant, of as many varieties as can find accommodations on the lawn, in order that they might enjoy each plant individually as it passes through its varying changes of foliage, flowering, fruitage and leaflessness throughout the year. Such an arrangement may be appropriate for an arboretum or trial grounds, and there are special charms in such a collection of shrubs as each successively comes into bloom. But as the blooming period of most shrubs is only from two to four weeks, the beauty of foliage hues both in the greenness of summer and in autumn foliage, such as that of the golden elder and philadelphus, variegated weigela, purple-leaf plum and barberry, etc., is considered done very effectively, but more frequently the result is a conspicuous blotch amid the verdure. The handling of bright colors always requires a high degree of artistic skill or the result will be displeasing to the most refined tastes; it may afford valuable object lessons to the student and gardener but it is not the way to produce the most effective results in lawn adornment.

To quote again from Prof. Bailey's essay on shrubbery: "Plants scattered over a lawn destroy all appearance of unity and purpose in the place. Every part of the place is equally accented. The area has no meaning or individuality. The plants are in the way. They spoil the lawn. The place is random. In large grounds the shrubbery border should be composed of successive masses of several plants

of one species together, followed by another harmonious group of another sort, the border of the two groups interlacing with each other, making a natural and easy transition from one variety to the other. Let the transition from one variety to another be gradual, not too sudden, and let the groups be not too large or too exclusive. An odd plant taller or different from the others may occasionally stand out or above its companions, very effectively; of course tall growers at the back flanked with smaller and low branching species in the fore. It is not advisable to mix evergreen and deciduous shrubs in the same group. A few shrubs seem to be admirably adapted for filling in plants. *Tamarix* is one of these which may often be used to relieve a too monotonous sky line, or formality or to add variety in foliage effect, it being a tall, neat, inoffensive plant which will harmonize with almost any other. For low drooping shrubs to be used for carrying foliage from the grass lawn up to taller plants, few are more effective than *Spirea Thunbergii*, *Stephanandra*, *Rhodotypus* and *Berberis Thunbergii*.

Shrubbery Outline.

The outlines of shrubberies should not be too straight or formal, but irregular and natural. A skilled florist or gardener should almost conceive these ideas without instructions, but definite knowledge of the habits of the different shrubs to be employed is essential to enable one to make a planting which will develop consistently as they increase in age and size. That such information can only be obtained by observation and experience is evidenced by the very large number of inharmonious combinations that are seen in shrubberies all about the country. Probably rhododendrons are treated injudiciously and are a source of dissatisfaction and of waste of money more than any other shrub, largely through misunderstanding. Rhododendrons are sociable individuals, liking the companionship and protection of other plants. Their fine fibrous roots delight in cool, moist soil, but do not want to go very deep in earth to find these conditions, and are particularly sensitive to excessive heat or drought in midsummer. A situation where the shadows of large trees or buildings will shield from midday sun in summer and winter and from severe winds is an ideal position. A perpetual mulch of leaves renewed each autumn and with a light coat of stable manure on top of the leaves, to keep them from blowing away, is most congenial to them. Mulching and shelter from wind are the most essential conditions.

One of the most satisfactory plantings of rhododendrons was a small bed at the south corner of a residence. They were wanted in this position but the owner had been told that they would not succeed in southern exposure. Recognizing the fact that a large pear tree southeast of this bed would afford midday shade, and groups of large forest trees and neighboring buildings not far away would afford shelter from wind, the location was considered eligible. The natural soil was quite sandy—brought by generous excavation, two feet deep, and filling

with muck and vegetable mould taken from open ditches on a nearby farm, and a few barrels of Jersey peat, a soil was prepared which proved suitable. The rhododendrons were planted four to five feet apart and all vacant spaces filled in with *Mahonia aquifolia*, *M. Japonica* and *heath arborvitae* (*Thuya ericoides*) until the bed was a solid mass of foliage, effectually shading the stems of the plants and the ground around them. The ground was then covered with a mulch of leaves a foot deep, with instructions to keep the mulch there all the time, renewing it every autumn, and as the rhododendrons grew and spread, that the nurse plants should be cut back or removed. This planting was made nine years ago and has been successful.

Shrubs for Small Gardens.

A most difficult problem in shrub arrangement, more frequently met with in the practical experience of florist and jobbing gardeners than in the laying out of large lawns where general rules of landscape gardening might be employed, is the requirements of owners of small yards, who want one dozen of their old favorites set in a bed or along a garden fence. Perhaps it will be a lilac, forsythia, snowball, cydonia, weigela, spirea, deutzia, chionanthus, dogwood, hydrangea and a purple filbert and such other incongruous neighbors. He who can arrange such a group as this tastily and so it will continue attractive throughout the year is a master in the art of shrub arrangement. Hopeless as this task may seem there are plants which we may always look to for help in such emergencies. The slender sprays of feathery foliage of the tamarix, the gracefully drooping branches of *Spirea Thunbergii*, *Stephanandra flexuosa*, the single flowered *kerrias* including the white form known as *Rhodotypus kerrioides* with its crinkled foliage, are all gentle, inoffensive subjects willing to help fill up a gap and hide from public gaze the awkwardness of their fellows wherever such service is needed. By adding a few plants of these slender species the stiffness of a group may be much relieved and some of its awkwardness softened.

One of my most valuable lessons about planting was learned in walking through a lawn with an old gardener who remarked, "The man who planted this place understood his business. See—every tree is set on a little hill or mound." The next time you have opportunity, compare the difference in appearance of a lawn where trees and shrubs stand in mounds slightly above the level of the surrounding lawn, and other plantings where the lawn level is carried up to the roots of the plants, or as is sometimes seen, where plants stand in a depression. See which you like best, and then judge of the wisdom of the above suggestion. A bed or border for shrubbery should be heavily manured and dug or plowed deeply and prepared as carefully as for corn or any other crop which is wanted to grow well. If I tell you not to run the roots into a little hole in the ground but to set them on a little mound, you will think I am joking, but that is pretty nearly what I mean.

It would seem as though every gardener should be tired of bearing the

trite advice to dig big holes for shrubs and trees, but the innumerable evidences of violations of the rule show that many planters have not yet learned this lesson. Some shrubs, as forsythias, spiraea, deutzias, etc., may flourish if stuck in the ground any way, but many others need the best of care to insure success, and carelessness in setting often discredits good material and a job which in other respects may be all right. Dig holes larger and deeper than the roots require and larger in diameter at bottom than at top, then fill in some of the best soil obtainable, making a little cone or mound in the centre of the hole. Then spread out the roots of plants around this mound of earth so that all roots tend downwards rather than horizontal or upwards. Fill in the richest soil, first tramping firmly as the filling proceeds. Remember Peter Henderson's chapter on the "Use of the Foot in Planting." Also bear in mind that it is results that count and five minutes spent in care of planting may mean one or two years saved in attaining the desired end.

Under the heading "How to Treat Shrubs" I will allude to manuring, mulching and pruning. After planting apply a good mulch of manure to conserve moisture, furnish nourishment and suppress weeds. An annual mulching of leaves, with coarse manure to prevent their blowing away, is beneficial to almost every class of plants, and mulched or fallow ground is better than grass around the stems. Most deciduous shrubs should be pruned severely, when planted. Rhododendrons, azaleas, andromedas, etc., are usually transplanted with balls of earth, and do not need much pruning but, where it is needful, will not hurt them.

Pruning.

The annual pruning is a most important part of the work of the care of shrubbery and the point most difficult to give instructions on by written directions. It is an art which must be learned by practice and observation. The general rule is to trim early bloomers, as soon as they are through flowering, and midsummer or late bloomers, in winter, contains a suggestion, but the indiscriminate cutting back of every shrub every year is a great mistake. When a shrub seems weak and needs strengthening, cut out declining shoots and apply manure around it. When one is too vigorous and rampant remove or shorten superfluous shoots and reduce to symmetry with as little mutilation as possible. When one has become overgrown and dilapidated in appearance, cut back a part, or perhaps all, of its unsightly stems, severely, probably at the ground, and allow new shoots to restore the beauty and vigor of youth.

The only way to learn the art of trimming shrubbery is by observation and practice and the exercise of judgment. A safe general rule is that whenever you see a twig or branch which needs removing, cut it off on sight, regardless of time of year or other conditions; and when you don't see anything that needs removal, don't prune it, regardless of rule or custom, and for a negative rule, never shear a shrub with a hedge shears. The shearing of lawn shrubs into bald patches,

suggestive of convicts or sheared sheep, displays ignorance of plants and depravity of taste. To the last general rule I make exception for topiary gardening—but the creation and care of topiary gardens and of formal specimens is a special art for which all of the above suggestions would have to be modified. If my feeble sentences may be suggestive of useful afterthoughts in your minds and in mine, they will have accomplished all that I can hope for them.

CLUB AND SOCIETY NOTES.

The Fairlawn Improvement Society, Providence, R. I., hold their annual flower show on Sept. 7 and 8.

The New Hampshire Horticultural Society will for the first time hold its annual meeting in Exeter in October.

For the State Fair to be held in Wheeling, W. Va., on September 9-13, one of the attractions announced is the exhibition of dahlias from C. Betscher of Canal Dover, Ohio.

The committee having in charge the fall chrysanthemum show of the State Floral Society to be held at Little Rock, Ark., in November report that \$550 in prizes have already been secured.

The Huntington Horticultural and Agricultural Society will hold its fifth annual fall show on September 26. Liberal cash premiums are offered. Schedule of prizes may be had on application to A. H. Funnell, Sec., Huntington, N. Y.

Choice Ornamentals

DAHLIA SHOW AT BOSTON.

The dahlia show at Horticultural Hall, Boston, this week is unquestionably the finest exhibition of dahlias ever given in America. With the exception of a few exhibits of other seasonable flowers the entire space of the two large halls and the loggia has been given over to the dahlia groups thus affording abundant room for staging, which has been done to perfection and for the visitors to move about with freedom.

The provisions of the prize schedule for the various classes of blooms have been well taken advantage of, the entries in all classes being numerous and the quality of the flowers throughout is remarkable for uniformity of size and poise while much good taste has been displayed in the arranging and contrasting of colors. The sensation of the show is A. H. Wingett's Charles Lanier a four-year-old seedling of enormous size and vigor, deep yellow in color, which may be appropriately described the Col. Appleton of the dahlias. The flowers, which came in excellent condition all the way from Lenox are shown in one of the large vases occupying the centre of the stage in the lecture hall.

Without going into details of the many exhibits we should especially mention the long table contributed by W. V. Rawson Co., which is an excellent example of the decorative possibilities in dahlia staging. Tall vases filled with long-stemmed flowers in masses of color occupy the centre of the table; these are flanked by lower vases and the whole is bordered with single blooms shown in the usual manner, there being nearly 3000 flowers in the entire exhibit. This display is a great relief from the monotony of the other tables with their thousands of individual blooms arranged with mathematical precision.

Sidney Hoffman makes the first attempt at a public demonstration of the uses of the dahlia in floral work, with a large table centre piece of long-stemmed scarlet and purple cactus dahlias, a large wreath of pure white blooms of several varieties and a handle basket of huge pink blooms.

As above mentioned all classes of dahlias are well represented but the greatest interest of the growers seems to centre in the show and decorative sections, the latter especially being shown in far greater number than ever before and blooms from six to eight inches diameter are plentiful. The cactus class is also shown in marvelous perfection but new or sensational varieties are not as frequent as in the previously mentioned classes. The pompons barely hold their own and the singles are shown only in moderate numbers, the only advancement apparent being in the number of varieties of the 20th Century type.

Outside of the dahlias there are a number of other displays worthy of notice. J. Heurlin's long table of hardy herbaceous flowers shown so admirably and plainly labelled with interesting information cannot be passed without a word of commendation. The wonderful development in the gladiolus as shown in the sensational display of B. Hammond Tracy is a revelation as to the possibilities with the Nanceianus combinations of Dracocata, Gandavensis and Sandersoni

A SWEET PEA QUARTETTE.

Snapshot of (leading from left to right) Robert Sydenham, sweet pea specialist, Birmingham, Eng; W. Atlee Burpee, Philadelphia; Alfred Watkins of Watkins & Simpson, London, England; and Wm. Cuthbertson, of Dobbie & Co., Rothesay, Scotland—taken on the trial farm of Watkins &

Simpson, Felton, England, July, 1907.

(This picture is especially interesting in connection with the sweet pea review in our issue of August 17, 1907—which see. Mr. Burpee has returned with a full honey bag from his European trip, and we hope to get our share of it soon.)

blood. Several of Mr. Tracy's seedlings vie in beauty with the best of the Lemcine productions. R. & J. Farquhar & Co., make a superb display of lancifolium, auratum and philippense lilies that fill the hall with fragrance.

A handsome group of greenhouse plants from Mrs. J. L. Gardner occupies the further end of the large hall. A dozen specimens of Clerodendron Fallax with their showy heads of vermillion bloom are brilliantly effective.

The fruit and vegetable display is not large. E. L. Lewis and Ed. Parker are each represented by fine collections and Wm. McAllister, gardener for Mrs. J. C. Whitin, is the only competitor in the hothouse grape class. In his collection the new Diamond Jubilee attracts much admiration. Thos. T. Watt, gardener at Wellesley College, shows some fine celery remarkable from the fact of its having been grown on light gravelly soil with the addition of leaf mold and fertilizer.

BAMBOO CANES TOUGH AND STRONG

6 ft. long—\$1 per 100; \$6 per 1000; \$11 per 2000

They cost about 10 per cent. more than other kinds, and they are 10 times better.

STUMPP & WALTER CO., - 50 Barclay St., New York

SEED TRADE.

Mr. Earl of Burpee's, Philadelphia, started for California on August 25 to review the onion and other late crops.

Wm. B. Hughes and Augustus Vogeler of Salt Lake City are about to start in the seed, produce and commission business at Twin Falls, Idaho.

The sweet pea trade is reported as booming. The American and European demand are alike brisk and some of the leading stocks are already cleaned out.

At a meeting of the directors of the Dakota Improved Seed Co. on August 14, it was decided to postpone the completion of their seed house until the spring.

Advices from Germany indicate poor outlook for flower seed crops on account of cold rainy weather during June, July, and August. Prices there will undoubtedly be higher than last year.

With the exception of meadow fox-tail, which promises a larger yield and somewhat easier prices, every other European grass seed has given a shorter, in certain cases even far shorter crops, and higher prices than last season are sure to prevail, especially for fancy grades which in some cases will be fifty per cent. higher.

CATALOGUES RECEIVED.

Thomas J. Grey & Co., Boston, Mass.—Catalog of Fall Bulbs for 1907. With a tasty green cover, "Neat but not gaudy."

BODDINGTON'S CHRISTMAS SWEET PEAS

BODDINGTON'S EXTRA-EARLY CHRISTMAS WHITE SNOWBIRD. An exceptionally early Sweet Pea for indoor flowering—will bloom six weeks after sowing. Color clear white upon long stems; habit fairly dwarf, and of exceptionally free flowering qualities. Trade pkt. 50c., per oz. 30c., ¼ lb. \$1, ½ lb. \$1.50, lb. \$2.50.

CANARY. Similar to the above, but flowers of an exceptionally good yellow. Trade pkt. 50c., per oz. 30c., ¼ lb. \$1, ½ lb. \$1.50, lb. \$2.50.

FLAMINGO. Color scarlet; free-flowering and early. As the crop of this variety was small, we can only send out packets this season for trial. Pkt. 25c., 5 pkts. for \$1.

BODDINGTON'S CHRISTMAS PINK. This is the earliest and most profitable and useful Sweet Pea in cultivation as by sowing the seed under glass in latter part of August, flowers can be cut from Thanksgiving on during the winter months. Per oz. 10c., ¼ lb. 30c., ½ lb. 50c., lb. 75c.

BODDINGTON'S CHRISTMAS WHITE. A grand companion to Christmas Pink. Per oz. 10c., ¼ lb. 30c., ½ lb. 50c., lb. 75c.

Our Fall Bulb Catalogue now ready, if you have not already secured one—send a postcard today. Besides a full collection of seeds for fall sowing it contains a list of over

THE FLORA OF YELLOWSTONE PARK AND THE PUGET SOUND COUNTRY.

Read before the Society of American Florists at Philadelphia by J. Otto Thilow, of Henry A. Dreer, Inc.

It is hardly possible in the space of the allotted one or even two hours to give a fair description of the flora of this vast park—better styled, "The World's Wonderland," and when coupled with the natural and curious phenomena which exist throughout, it is the more wonderful, and in greater contrast than can be found anywhere in the world. Upon entering at the Gateway at Gardiner the flowers of the Park greet you before even entering the Gardiner Canon—and are prominent throughout on mountain side and in the valleys—with species suited to the location—and in their season covering their native habitat with a conquest of color. They grow almost everywhere, and one rarely finds a spot so sterile that Nature has failed to beautify it with some simple blossom.

We will take a tour of the Park throughout, following the coach road, and note from place to place the various flowers to be found during the summer season, and while enroute get a glimpse of the wonderful and mysterious formations produced by the geysers and hot springs in their constant action, whose beginning has no record, nor whose ending a prophecy. Alighting from the Northern Pacific train at Gardiner Station, the Gateway to the Park, one is seized with an unrestrained anxiety to mount to the top of one of the six-horse coaches in waiting, and get the first ride of five miles up and up to the altitude of 6000 feet above sea level, when reaching Mammoth Hot Springs. A full afternoon is offered here for sight seeing and reconnoitering. The hillsides near the springs are covered with bitter-root or wild portulaca (*Lewisia rediviva*). Its stem, calyx and flower are of delicate pink, having no green; it is of low growth. The root of this plant was used by the Indians for food.

The bitter-root has been chosen as the State flower of Montana. The Lungwort (*Mertensia*) is a harbinger of spring, appearing very early with its blue bells.

The night-blooming *Mentzelia* is considered one of the most beautiful flowers; found on desolate and arid spots; it somewhat resembles a thistle; it is found abundantly below the Mammoth Hot Springs.

The anemone, or rasque flower, is found in May and June about the foothills of Mammoth Hot Springs.

A trip over the formations presents a vivid brilliancy in coloring of which the flowers cannot boast, among them Pulpit, Jupiter, Cleopatra, Minerva, Hymen, and Angel Terrace, Cupid's Cave. Orange Geyser formation, and every conceivable color in the hot springs themselves. The afternoon spent with this constant alpine exertion fits one for early retiring and sound sleep.

The trip is resumed the next morning in coaches of twelve including the driver, drawn by four horses well matched. The start is made at 8 A. M. on toward Norris, twenty miles distant. A few miles from Mammoth

Hot Springs we pass through Silver Gate, a mass of Travertine rocks, of limestone formation. They are called the "Hoodoos." Further on, and when 12 miles from the Springs, Bunsen Peak comes into view. This peak, 9700 feet high, is covered with growth of pine contrasting beautifully with Terrace Mountain opposite, which is of beautiful yellow and gold. Between these two the road winds, hugging Terrace Mountain, and elevated by a concrete viaduct, below which the Glen Creek finds its way into Gardiner Canon.

The evening primrose (*Oenothera*), also called rock rose, is found here. It is a night bloomer, and very fragrant. It is found where there is apparently no soil. The flowers are white at first, and gradually turn to a deep rose pink. The period of flowering is long. There are four species.

The beard tongue (*Pentstemon*) in thirteen species is found here, and

J. OTTO THILOW

almost throughout the Park, and is most noticeable on the roadway where it catches much of the dust of the coaches, yet it seems to defy the dust and drouth, and exists in spite of adverse conditions.

Halfway to Norris (10 miles) is located the wonderful Apollinaris Spring. None of this valuable water is wasted. That which is not relished by the tourist runs into a tank, and is taken up by the sprinkling carts and sprinkled on the roads to settle the dust, as well as it often unsettles the stomach of the tourist, who unwisely takes too much.

Obsidian Cliff comes next into view. This wonderful mountain of glass, as black as coal, is a world's wonder, and no doubt the remains of volcanic action. It is a half mile long and 250 feet high. On its top is a forest of pine, thinly scattered but growing. When building the roadway it was necessary to cut through one end. This could be done only by heating it with blast fires, and pouring cold water upon it, so by crumbling it its removal was possible, as it resists the chisel and blasting.

Beaver Lake nearby is now overgrown with vegetation. The blue gen-

tian is prominent here, and also the lupin, which comes in colors from very pale lavender to deep blue and purple. It is found throughout the park, and in bloom the greater part of the season. Continuing on and looking over the valley to the right the Twin Lakes can be seen, but before reaching them Roaring Mountain is heard to the left; a powerful steam vent near its summit, which has been quite active since 1902, makes a very loud noise which can be heard a mile away.

Arriving at Twin Lakes (16 miles) one is struck with its beautiful blue, not due to the hot water as in the other basins and lakes, as the Twin Lakes freeze over in winter, and for that reason aquatic growth is abundant, even to some native small flowering *Nymphaeas*. The undergrowth in the pine forest is very thick, resembling the prostrate juniper, but upon examination it was found to be low-growing hemlock, singularly encircling each tree. A little further on, and on a slight rise, a large area through the wood is covered with the native fern—*Cystopteris fragilis*, growing very thick, even to the edge of the road. The Devil's Frying Pan is the next interesting object. It is a small basin, or geyserite, vigorously stewing or frying, resembling a kitchen spider in operation.

Norris Geyser Basin is next in evidence; not in view but in odor. The sulphur fumes are clearly impressive, perhaps nowhere in the Park is this as prominent as at Norris Geyser Basin. The trees have suffered severely from the many new spouting and sizzling springs, which have sprung up in recent years; and have added to the pot-pourri already in innumerable variety. Black Growler, Hurricane, Congress, Monarch, Locomotive and New Crater are among the noisy veterans, while the Devil's Bath Tub performs its regular function of giving his Satanic Majesty a hot wash-off whether he objects or not. One and a half hours are spent here for lunch and sight seeing. Very few flowers can be found here, except a few pentstemons among the scrub pines north of the formations.

The road follows the Gibbon River to within a few miles of its mouth. The ride through Gibbon Canon of about 6 miles is one of the most interesting through the Park—the road lies close to the river's edge, the mountains rise on the opposite side presenting beautiful views. Large clumps of phlox of the subulata type are on and about the rocks on the opposite side of the river, in bloom only in the early season directly after the snow disappears.

Beryl Spring, five miles from Norris, is close to the road, discharging a great volume of water, and sometimes vapor enough to obscure the roadway. The next interesting object is Soda and Iron Spring—everybody takes a drink. Gibbon Falls a half mile further on is one of the Park features—rushing through the Canon and over the black rock it presents a beautiful veil effect.

The Colorado blue spruce growing up out of the Canon alongside the falls, even towering to the top of the cliff, gives additional color to this beautiful scene. From this point a splendid view over the forest valley

Dreers Special Offer OF ARAUCARIAS

Our stock of Araucarias is exceptionally fine this season, the plants are well hardened off and if you anticipate to lay in a supply, now is the time to buy. We are in position at present time to give you much better values than after the plants are placed in winter quarters.

HENRY A. DREER, 714 Chestnut St., Philadelphia, Pa.

can be had. In the next four miles there is no scenery of special interest until the coaches reach Fire-hole river again, and come in full view of the pretty cascade; then the road ascends the right, or east bank of the river for the next three miles. Before reaching Nez Perce Creek a quantity of larkspur (*Delphinium*) was noticeable, ranging in color from very pale light blue to a strong sky blue, and a few clusters of immortelles (*Anaphalis*) in pale pink and white, the foliage of silvery white.

Covering the twenty miles from Norris brings the tourist to Fountain or Lower Geyser Basin. This is a very interesting place, and the first where the black and brown bears can be seen, and the first place visited is their feeding grounds. They are interesting and quite docile, perhaps because they are well provided with substantial food they are not anxious to dull their teeth on lean Yankees. In the woods near the bears' feeding grounds a profusion of harebell (*Campanula rotundifolia*) can be found with an occasional blue beard tongue (*Pentstemon*).

Enough time is allowed in the evening and early morning to visit the many interesting features—The Fountain and Great Fountain Geysers, Mammoth Paint Pots, Surprise Pool, and many other pools and spouting springs, whose weird performances would suggest a name from each visiting tourist.

A very little flora can be found on the plateau, as a great area is covered with the geyser product—finding its way even into the valley, where hundreds of acres are covered, and the trees have yielded to its effects. The lower Geyser Basin covers an area of 30 square miles. The Twin Buttes are prominent features; these two peaks, which are west of the river, dominate the entire basin. The well known Excelsior Geyser is the greatest in the Park, and perhaps in the

known world. This water volcano, which is near the Firehole river, pours out 4000 gallons of water per minute, even when not in eruption; its dimensions are about 330 feet by 200 feet, and 20 feet deep, and when in eruption it throws a body of water 50 feet in diameter 250 feet high, and at such times ejects very large rocks. Prismatic Lake is a wonderful body of water, in which can be seen a perfect reflection of the rainbow colors. This pool is 250 feet by 300.

The tour from Lower to Upper Geyser Basin, known as Old Faithful, covers a distance of nine miles. Along the roadway, and looking over into the valley, the low growth of spruce presents a modern Park appearance. In some of the shaded spots the wolfsbane (*Aconite*) shows in clusters of violet purple. This plant seems to flourish best in high altitudes.

Just before reaching Upper Geyser Basin the first interesting feature is Biscuit Basin, which is off from the road westward. It contains a geyser and several beautiful springs. Sapphire Pool is especially beautiful, of a rich blue.

On the main road, and just at the edge, is the wonderful Morning Glory Spring. It represents perfectly a large azure blue flower of that name. A little above is the Fan Geyser. It spouts obliquely and not vertically.

After crossing the river toward the west is Grotto Geyser, and the Giant. The interesting Punch Bowl is a round basin rising only about 18 inches above level ground, with every conceivable color on its sides, showing the effect of mineral in its water. It is in a constant boil. Rounding the road a little to the left the wonderful Old Faithful Inn comes into full view. Its approach is beautiful, as it is a winding road through a pine forest.

When the tourists arrive and enter this magnificent structure, they at once express the desire to remain longer than the allotted time. Time

would not permit a full description of the wonderful conception of architectural genius which planned this model hostelry. It is constructed with material from the surrounding forests so artfully joined together that it does not deviate from the idea of a mammoth bungalow of log cabin style. A view from the roof towards the east over the tops of the forests into the mountains is enchanting and refreshing.

Directly in front of the Inn is the home of geysers, springs and pools, and to the southeast is Old Faithful, which is also a veteran timepiece as well as a monster geyser. Its hourly action is with the same force as it has been for thousands of years perhaps. A stroll back of the hotel through the pine forests and among the bears reveals a very little of interesting flora except an occasional glimpse of the mountain primrose. They are more plentiful after leaving Upper Geyser Basin and going toward Yellowstone Lake. At least three varieties of hardy asters partly cover the wooded hills back of Old Faithful Geyser. They are in bloom the whole season. A trip with the guide over among the geysers and pools is highly interesting, Emerald Pool being a chief feature among these. When following the guide and walking in the course as he directs, one is reminded of going through an extensive perennial garden, constantly looking for new features. After returning to the hotel a pleasant evening is spent before a large open log fire; corn popping and other entertaining features are the evening's program, not forgetting a

SMALL EVERGREENS

for late fall and winter use, mostly Conifers, in assorted hardy kinds, ranging from 12 to 16 inches in height, the hundred from twenty to thirty dollars, duty paid f.o.b. N. Y., fall delivery. Address timely.

AUGUST ROLKER & SONS

31 Barclay St., or P. O. Box 752, NEW YORK

night view of Old Faithful in eruption with searchlight and color effect. The old fashioned beds induce an old fashioned sleep; the exhilarating atmosphere in early morning induces a sharp appetite for old fashioned corn cakes and an old style breakfast with modern trimmings and service. An early start is made for the lake (19 miles), and one of the most pleasant rides in the Park. Keppler's Cascades, a short distance out, are generally viewed by everybody. Along this route the beard tongue (*Pentstemon*) is plentiful. Madison Lake, ten miles up the valley is said to be further by water route from the sea than any other lake on the globe. Before reaching the lake the Continental Divide is crossed—altitude 8425 feet. On this height is the lily-covered pond filled with the yellow water lily (*Nymphaea polysepala*).

Descending the Divide the coaches pass down Corkscrew Hill, and when arriving at Shoshone Point an enchanting view of Shoshone Lake miles away presents a most restful scene over the towering pines in the foreground. Lake View, one mile from the Lake is said to be one of the most striking water landscapes in the world.

After passing through a dark pine forest the coaches suddenly arrive at Thumb Station at the edge of Yellowstone Lake, a body of clear cold sparkling water 7741 feet altitude, or nearly one and a half miles above the sea. After lunch at Thumb it is optional to continue with the coaches over the mountain road (16 miles), and cross Natural Bridge, or cross the lake by boat; either ride is extremely delightful, the coaches are constantly in full view of the lake. About 5 P. M. brings the tourist to Lake Hotel. This place with its surroundings, overlooking the tranquil lake bespeaks rest from the roaring and hissing geysers and hot springs—the only roar would be from Bruin and his associates in the woods back of Lake Hotel. A glimpse from the roof of the hotel off to the left of the lake reveals a scene without compare and no encomium that it would be possible to pronounce would overrate its merits; the towering peaks gilded by the setting sun clothed them with a halo of the softest tint which leaves an impression never to be forgotten.

A ramble through the woods and along the river and edge of the lake reveals a garden of natural flora. The seed fluff of the *Clematis ligusticifolia*, is abundant, forget-me-not, (*Myosotis sylvatica*) is also found here and along the river through Hayden Valley. The everlasting flower (*Antennaria dioica rosea*). Aside from becoming well acquainted with the bears, a delightful pastime is fishing in the lake and river for trout; it is always a sure catch, one can without fear of contradiction describe their size to those who have been through the Park. The night is spent at Lake Hotel, a peaceful and restful one it is, away from the roar of the geyser which knows no cessation. An early start is made in the morning for the crowning feature of the Park's wonders, viz., The Grand Canon. After covering 7 miles and before entering Hayden Valley, the wonderful Mad Volcano is visited. It lies west of the lake a short distance. The action is

uncanny but interesting; it is a huge cavern filled with mud which is thrown from one side to the other by steam force which issues from many openings in the sides of the crater. This action is constant, weird and noisy, and emits an odor far different to that of heliotrope or lemon verbena.

While passing along the river bank many clusters of the buttercup (*Ranunculus Montanensis*), were noticeable, but not in bloom, their time being June and July.

Trout Creek (9 miles), presents an interesting feature, having cut its way through and around the plateau, forming the Northern Pacific Railroad trade-mark. Two miles further on and a half mile from the main road is Sulphur Mountain, which is especially interesting in the morning when the numberless little steam jets issue from its top and sides. A notable feature is that the trees do not object to this sulphur bed, they grow freely amid this sulphur deposit.

Hayden Valley is one of the most picturesque scenes, the river winds beautifully on and narrows as it reaches the cascades. This valley is an important winter range for the Park buffalo and elk, and covers an area of fifty square miles. A dense fern growth follows along until the cascades are reached.

Upper Falls 112 feet high is beautiful and turbulent. The scenery here is very rugged.

In a moment the coaches arrive at a bend in the road which reveals the whole vista of the Grand Canon of the Yellowstone. A sharp rise in the road with a heavy tug brings the tourist to the Grand Canon Hotel, which is 1000 feet above the Upper Falls. The only time spent at the hotel is the lunch hour, the balance of the day is given entirely to the Canon which can be viewed from either side of the river. The Grand Canon of the Yellowstone is acknowledged by all beholders to stand without parallel among the natural wonders of the globe. Other canons have greater depths and more imposing walls, but there are none which, in the words of Captain Ludlow, "unite more potently the two requisites of majesty and beauty." It is 2000 feet wide, 1200 feet deep and twenty miles long. It is pre-eminently a canon of color. Its principal feature and a most inspiring one is the lower or Great Falls, 310 feet high, pouring over its brink the waters of the Yellowstone River with a thundering force. The west side is a panorama of the brightest colors that pigments could suggest, while the east side is heavily set with pine and spruce contrasting beautifully through its entire length. Forget-me-nots (*Myosotis sylvatica*), are found on the very crest of the east side and half way down its bank.

Along the road and leading up to the side of Mt. Washington the buttercup grows in profusion, also many clusters of the blue gentian. The columbine (*Aquilegia*) is here in its favorite habitat. Quite a chapter can be written about Mt. Washburn, and its commanding prominence. It is the most celebrated peak in the Park from which a panorama which defies description lies before you. As the tour was over the old route leading from Canon back to Norris, thence to Mammoth

Hot Springs and Gardiner, the pleasure and many new features are in store for those who will from now on tour the Park, as the new route will be via Yancey and Mammoth Hot Springs. This will afford a trip along nearly the entire length of the Canon, and over parts with new and distinct features different from those described above. We will, therefore, follow the old route from Canon to Norris, passing the Solfatara Plateau and the Virginia Cascade. The mountains and valleys along this stretch are very interesting both in scenery and heavy growth. After covering about 12 miles, Norris is reached, lunch is taken another visit made to springs and geysers, and then toward Mammoth Hot Springs and Gardiner.

In concluding with the Park flora a few species which have not been mentioned should have a place. The fire weed or willow herb (*Epilobium*), the globe flower (*Trollius albiflorus*), shooting star or American cowslip (*Dodecatheon* in four varieties), bladder pod (*Physaria*), Jacob's Ladder (*Polemonium*) in four varieties, golden rod (*Solidago*), in five varieties.

It is interesting to know that the cultivated varieties such as sweet peas, which bloom through the whole season, pansies in large flowers, marigold, asters, and many of the leading annuals find congenial conditions for thorough development.

Fifteen hours by the Northern Pacific brings the tourist into the State of Washington among the stately firs and heavy undergrowth of beautiful wild flora. The vast difference in climatic conditions between the east and west of the States of Washington and Oregon are such as to give each State a northern and southern flower blooming period. The flowers of the Puget Sound region grow in great profusion and beauty.

We shall not take up the wild flora, but touch only in part on the results achieved with cultivated varieties which are generally known. Roses bloom out of doors from early in April to late in November, and nowhere, not even in California, are they excelled in size, beauty and fragrance. The mild winters and moist climate of the Coast region make ideal conditions for propagation of shrubs and bulbs. Narcissus, tulips, hyacinths, lilies, dahlias and others multiply rapidly, during the summer, so that full sized young bulbs are harvested by fall. Lilies in particular seem to enjoy the soil and weather conditions, and after once planted they become established and continue year after year bearing and multiplying. Sweet peas are used as veranda vines; they bloom through the summer until frost in November, and cover trellises twelve feet high. In Seattle in the residential sections, every home, with rare exceptions had abundance of sweet peas and Noisette roses are trained over large screens and on walls; the Hybrid Teas seem especially adapted to the soil and weather of Seattle, Tacoma and Portland.

Hybrid clematis grows as freely as the honeysuckle, and blooms through the summer and fall. The Mountain Ash is a prominent specimen in all parks and along the avenues covered with its red clusters.

Referring to the roses again, it is interesting to note that many varieties in Standards flourish as well as in England and France. The free flowering Hybrid Teas are planted in rows between trees, and between the sidewalk and curbstone, producing large bushy specimens 4 to 5 feet high and of same diameter, and were in full bloom at middle September. Retinosporas grow in perfect symmetrical specimens twenty feet high, the box elder—thirty feet high, and in perfect foliage.

The Puget Sound country has every advantage for the development of plants, flowers, and seeds; while its location would lead one to think it was of the Alaskan climate, lying north of Quebec and Duluth, yet it is four degrees south of London, and as the British Isles are tempered by the Gulf Stream, this north-west country is influenced by the Japan current which is 400 miles wide. There is neither extreme heat nor cold, nor disastrous lightning and storms. The wild flora of this belt of country is very extensive; it is interesting to botanists because of the thorough development of all plants and flowers.

PERSONAL.

On Tuesday, September 3, Jackson Dawson rounded out 36 years of service in the Arnold Arboretum.

Mrs. George W. Thornton, mother of the Thornton Bros., of Lawrence, Mass., celebrated her 80th birthday at Methuen on September 1.

William Brazier, foreman for Thomas Roland, Nahant, Mass., is in the hospital hopelessly ill with a tumor on the brain. Mr. Brazier's wife died last spring.

Prof. A. L. Peck, formerly of Amherst, Mass., has entered upon his duties as assistant horticulturist at the Kansas Agricultural College, Manhattan, Kansas.

Visitors in Boston—Mr. and Mrs. H. G. Berning, St. Louis, Mo.; John Dunbar, Rochester, N. Y.; L. A. Beckmans, Augusta, Ga.; Mr. Harrison of Cragg, Harrison & Cragg, Heston, Middlesex, England.

James H. Beatty, who has been connected with the park department for the past twenty years, has been appointed superintendent of parks in Manhattan and Richmond boroughs of New York, at a salary of \$3,000 per annum.

FLOWER MARKET REPORTS

BOSTON A welcome spurt in business at the beginning of the week petered out before it acquired any great momentum, and just now things are quiet as they can be. The cool weather has shortened up the influx of roses somewhat and the unwieldy surplus of low grade blooms is reduced in consequence. All other varieties of staple flowers remain as reported last week.

BUFFALO Business is brightening up considerably all along the line. Roses, especially Kaiserins and Brides, and lily-of-the-valley, are in demand for fall weddings. Beauties sold well the past week, the quality being good. Asters of fancy quality were somewhat scarce, it being between crops, the late branching just coming on. Some excellent stock is being received and prices hold well. Gladioli have improved much and the fancy varieties find ready buyers, but there are too many mixed colors at times. Smilax and other greens have had a good call.

NEW YORK Fall activity has not developed to any appreciable extent yet. There are more flowers on the market than anybody wants, and sales are made at convenience figures mostly. Carnations are conspicuously absent, but there are plenty of dahlias, asters and other things available to take their place in floral work. Gladioli are plentiful, also lilies; orchids scarce and usually sold well in advance.

PHILADELPHIA Business was pretty flat last week. Good long-stemmed asters sold well as did also choice long American Beauties but the main receipts of both these items were shorts and were a sad glut among the enormous pile of fair to medium in all lines. Carnations are almost a negligible quantity although a few fairly good Lawson and Enchantress were noted. Cattleyas are very scarce. Lily of the valley fairly plentiful with good demand. Hydrangea and other outdoor subjects much in evidence but go slow. The gladiolus crop has lightened up considerably. Easter lilies are very good at present and have been a very satisfactory item for some time back. The Whitmani and other filmy forms of Nephrolepis are now a staple in the cut green line and bring from \$4 to \$5 per 100 fronds. Bronze galax is running low and will be entirely sold out before arrival of new crop.

SAN FRANCISCO I have not sent you any report lately, as business has been so dull here that there was nothing to report, but now florists and growers are getting hopeful, as with the returning of the people from the summer resorts and the end of the protracted car strike, trade is picking up all around, and there is a promise of a gay season among society folks. Liliun speciosum, asters, amaryllis Belladonna and most all summer flowers have been brought to market in such quantities, that they could be bought at almost any price. Roses

and carnations held their price as they were short in supply. A few chrysanthemums have been in the market for several weeks; they are of good quality for this time of the year. Violets are also in evidence. There is a prospect of a scarcity of roses and carnations for the next month, as most growers are replanting. Very few new greenhouses have been added the last year owing to the high price of building material and labor. This, together with the increased cost of fuel and help will tend towards higher prices for all crops.

DETROIT NEWS.

The local park board is doing some great work in pruning and spraying the shade trees of our principal streets. This work is carried on under the supervision of City Forester J. W. Hunter, and while the first special appropriation of \$3,000 is about used up, the Council seems to recognize the work done and is ready to allow \$3,000 more.

The dry season of several weeks back was broken by copious showers Sunday night, and the cool weather following will have a beneficial effect on our boulevards.

It is to be regretted that the local florists allowed the State Fair to go on without some competition for the many prizes offered. While the prizes are not very large, there is still a certain kind of advertisement connected with it which to date seems hereabouts to be recognized by the allied trades only, but not by the florists.

The most interesting display is staged by the Park Board. The best competing display is by Mrs. Bausch, with a well-executed Gates Ajar. S. F. Taplin shows a good collection of stove plants and large palms. Thos. F. Comaulack carries off the laurels for best asters, coleus and geraniums.

FRANK DANZER.

PACIFIC COAST SOCIETY DOINGS.

The Menlo Park Horticultural Society will hold its annual fall exhibition on October 18 and 19 in Menlo Park. The first annual flower show of the Marin County Horticultural Society will be held in San Rafael, October 19. Both societies have out a very attractive premium list and are working with considerable enthusiasm.

The German Gardeners' Society Hortensia will hold its annual picnic at the nursery of E. Flossmann, Oakland.

H. PLATH.

SAN FRANCISCO NOTES.

A. Mann, Jr., has sold out his interest in the Shibely Mann Co., to Mr. F. Shibely. Mr. Mann intends to go into the wholesale and commission business.

N. Peterson has been erecting a large and modern greenhouse in the rear of his store at 324 Fillmore St.

V. Matraia has gone East on a business trip.

Domoto Bros. are erecting a new house for Am. Beauties.

PHILADELPHIA NOTES.

The Philadelphia Cut Flower Co. have moved into their new quarters on the north side of Sawson Street.

Mr. Ed. Kantz of Chicago who was taken to the Municipal Hospital suffering from diphtheria during convention is reported to be progressing favorably.

The season has been favorable for dahlias and all the choice cutting and shipping sorts will soon be seen at their best. The Pennock-Mehan Co. are handling the cut of the Atco and Hammonton farms.

J. Otto Thilow of Dreer's has been selected by the management of the Jamestown Exposition for a talk on "Selection in Seed Raising" on September 21st. This is gratifying to practical men who have to listen so often to discourses purely theoretical, and does credit to the wisdom of the powers that be.

With a reckless disregard for the supply of retail florists in Philadelphia an insane Greek from Washington named Kantonas entered the store of Frank Polites on Monday and attempted to murder the proprietor with a club. A stiff straw hat, three employees and a policeman, all aided in preventing this untoward event and the fracas ended in a wrecked store including plants and show cases—with the hurry-up wagon for the crazy man. Mr. Polites had modestly declined to produce the small sum of twelve billion dollars—and the dance commenced.

NEWS NOTES.

The Illinois State Florist Association has changed its location from Joliet to Springfield.

Henry Crandall, of Glens Falls, N. Y., has presented his spacious grounds to the town to be used as a park.

The East End Floral Co. will open for business in Memphis, Tenn., this month. Charles Hammer is the proprietor.

Franklin & Crosby, of Brooklyn, Ct., have commenced building a range of greenhouses on the property recently purchased by H. D. Crosby in Danielson. Lord & Burnham Co. have the contract.

Three years ago Mrs. J. L. Gardner of Brookline and Boston established the custom of awarding prizes amounting to \$100, among the residents of the thickly settled portions of Boston for the prettiest ornamentation of windows in their homes with flowers, vines, etc. Prizes for this year have just been donated to eighteen fortunate contestants at Mrs. Gardner's Brookline home where she personally entertained them providing a special car for the trip. The interest in the contest grows each year.

MEETING OF WASHINGTON FLORISTS' CLUB.

The September meeting was held at the usual place, Tuesday evening, Sept. 3. Despite the heat and threatening elements the attendance was normal. The club had the pleasure of having Jas. Carstairs of New Rochelle, N. Y., with them for the evening. As this was the first meeting since the convention recently held in Philadelphia there was much to be said of the good times enjoyed there. It was voted that proper thanks be returned the Philadelphians for the hospitality extended members of W. F. C. whilst in that city. The handsome cup won by the Washington florists' bowling team was exhibited. At this point J. R. Freeman took the floor, and thanked his friends for the manner in which they worked for his election as president of the S. A. F. We hope it is only an honor deferred and that all in good time the recognition he so richly deserves may be his. A vote of thanks was tendered John Lewis Childs for the beautiful display of gladioli made at the last club meeting, although, —thanks to the express company—they were not received in time to be acted upon by the awards committee, they were none the less enjoyed. It was voted that in future the awards committee submit their decision to the club, to be held in abeyance till next meeting and then acted upon by the entire club.

It was announced that one of the police precincts has ordered bay trees and other shrubbery displayed on the sidewalks to be removed. Secretary McCauley was instructed to take up the matter with the authorities and report at next meeting.

There has been an invitation extended the club by R. Vincent & Sons to visit their dahlia farm on Sept. 17.

The October meeting of the club will be "dahlia night."

PUBLICATIONS RECEIVED.

Sixteenth Annual Report of the Board of Park Commissioners of the City of St. Paul. An interesting detailed report of the operations of maintenance for the year 1906, illustrated with full-page half-tones, and a frontispiece portrait of the late Joseph A. Wheelock, president of the Park Board for thirteen years.

List of the plants cultivated in the Botanic Garden at Brussels, Belgium, by Louis Gentil, Superintendent of the Garden. Contains two beautiful views in the conservatory and rockery. A very extensive list, comprising 1000 genera, 3200 species and 370 horticultural varieties, giving synonyms, authorities, etc.

OBITUARY.

Mrs. Mary A. Furey, a daughter of the late James Mallon of Brooklyn, N. Y., died at her summer home at Madison, N. J., on August 27.

Charles Mitchell, gardener to John S. Lyle of Tenafly, N. J., died after a brief illness on August 22. He was born in Aberdeen, Scotland, fifty-three years ago, had been in this country for thirty years, the last six having been spent at Tenafly. He leaves a widow and two children.

?

Is Your Name In The Above List? If Not, Why Not?

A LABOR SAVING DEVICE.

Here is an illustration of a device that everybody will want. A bright clean window is indispensable to the

florist and this specialty of The Foley Mfg. Co., of Chicago, insures it to anyone using the device. The hose and brush together are an invincible com-

bination. As a labor-saving invention it is in the front rank and, best of all, it is cheap. Watch for the advertisement which will shortly appear.

THE FLORISTS AND THE GLASS TRUST.

At the session of the Society of American Florists, in Philadelphia on Tuesday last, the Glass Trust was scored and a demand made for a revision of the protective tariff, under the provisions of which this Trust is enabled to charge high prices for its products.

The tariff discussion occurred at the close of the session, when Benjamin Hammond of Fishkill, N. Y., reported for the legislative committee. He told how application had been made to Washington praying for relief from the high prices charged for greenhouse glass, and urging tariff revision. Mr. Hammond read a letter received by the committee from Representative Sereno E. Payne, which contained an argument in favor of high tariff. Representative Payne said that glass amounting to \$54,189,856 was imported in 1896, and that this importation had fallen to \$17,933,000 in 1905. He argued that American wage earners were receiving the millions that formerly went to Europe. In conclusion, he reminded the florists that they were prospering now, whereas under the old Wilson tariff their business was wretched.

But the members of the society declined to be satisfied with Congressman Payne's

specious plea, which they characterized as "political bosh." They demanded to know the difference between the cost of glass manufactured in this country and that manufactured in Europe. They insisted upon knowing "to what extent the Glass Trust is milking the florist cow." They asked why it was that they are now compelled to pay \$3.70 per box for 16x24 greenhouse glass which some years ago they could buy at \$2.92. Only one member, a Philadelphian, by the way, was in favor of "letting the tariff alone," while one other, a man from Pittsburg, the headquarters of the Glass Trust, defended the combination and justified the increase in prices. Further remarks were made to the effect that Secretary Taft's promise of tariff revision after the next Presidential election is an old story, and that meanwhile the glass manufacturers are "laughing in their sleeves at the manner in which they are hoodwinking Congress and the American people."

But they will not be able to hoodwink Congress and the people indefinitely. So many incidents as this outbreak among the national organization of the florists are suggestive. They indicate an uprising of the people against the exactions of the Trusts, and this uprising may become formidable at the next election. It may result in send-

ing to Washington a House of Representatives which will compel even a Trust-ridden Senate to consent to a reduction of the tariff in the interest of the great body of consumers, instead of the interest of the Trusts. Wilmington, Del., Every Evening.

Nothing illustrates better the ramifications of the tariff than the issue raised by the florists regarding the duty on glass. This is imposed for the stimulation of the American glass industry, but the stimulation consists of a heavy tax upon other American industries, one of which is floriculture. The greater part of the glass is not used in making greenhouses; it is used in building houses, and every man who builds a house is just as really interested in the glass duty as the florists are, though he may not be so conscious of it because he buys a smaller amount.

Evidently the nonsense that the foreigner pays the tax makes no impression on the florists. They know they pay the tax, and they know, also, that they pay the tax whether they use imported glass or not. The purpose of the duty is to enable the domestic glass makers to get higher prices for their product.

The price of glass has advanced recently 25 per cent. The florists appealed to the chairman of the Ways and Means Commit-

IF YOU WANT TO KILL SCALE USE WILSON'S PLANT OIL

Take a can of this preparation, dilute to four times its bulk with water, and wash or spray your palms, ferns, aspidistras, smilax or any plants subject to bugs or vermin and **YOUR PLANTS WILL BE CLEAN No alkali. Nothing deleterious. Absolutely Infallible. Dries at once. Read what others say of it:**

Mr. Andrew Wilson—Having used your insecticide here, I can testify to its efficiency in destroying scale and other insects infesting plants.
New York Botanical Garden, Bronx Park, New York City, September 5, 1906.
Yours very truly,
GEO. A. SKENE.

Mr. Andrew Wilson—Dear Sir—Your Plant Oil is certainly the most effective scale killer I have ever tried. Please send another five gallons.
Florham Farms, Madison, N. J., December 8, 1906.
Yours truly,
A. HERRINGTON.

PRICES: 1-2 pint cans, 25c; pints, 40c; quart, 75c; 2 quarts, \$1.25; gallon, \$2.00; five gallons, \$9.00. Cash with order.

ANDREW WILSON, Dept. 5.

SUMMIT. N. J.

POT MAKERS FOR 140 YEARS A. H. HEWES & Co. Inc. CAMBRIDGE, MASS. KIND EVERY WARE FLORIST

tee and of course got no comfort from him. He pointed out that the imports of glass were less in 1905 than in 1896 and offered this as a complete answer to them. The American manufacturers have been driving imported goods out of the market pretty generally and would have done more of it if the tariff had not enabled them to maintain high prices.

Our present purpose, however, is not to discuss the merits of the case presented by the florists or the sufficiency of the reply of Congressman Payne. We direct attention at present to the evidence that the American pays the tax, that whatever benefit the tariff affords to one American interest it affords at the expense of, and through burdens imposed upon, other interests and the general consuming public. The tariff creates no values at all; it simply takes a lot of small sums from a great many people and combines them into a few large sums for a few beneficiaries of the system.—Philadelphia Record.

BUSINESS CHANGES.

Lloyd Swarthout intends to raise vegetables in his houses at Washington, Pa., recently vacated by J. Seamans & Co.

W. L. Drake & Co., of Kenosha, Wis., are enlarging their greenhouses on Chicago street preparatory to transferring there the stock of the Kenosha greenhouses just purchased by them. The Kenosha greenhouses will be torn down eventually.

As briefly noted in our issue of August 10 William F. Spry, Manchester, Mass., has sold his greenhouses and florist business to two private gardeners, Ascel Magnuson for

five years gardener to Mr. G. H. Black at Manchester, and Peter Hylan, 5 years at the Larz Anderson estates in Brookline, Mass., and Washington, D. C. Mr. Hylan will have charge of the greenhouses and Mr. Magnuson will attend to the landscape work.

ANOTHER OBJECT LESSON

TO get the full force of the curved eave unhampered by a shade casting gutter, look at a U-Bar house from the point of view taken in this photo. The gutter as placed casts no shade and the extreme lightness, yet evident strength of the construction, is unmistakable. Every little detail of the construction has been so carefully worked out to insure the durability of the house that we even immerse the cypress core of the steel U-Bar in a chemical preservative. The steel part is galvanized and then coated with a mildewless glistening aluminum paint. It stands for the very highest point yet reached in advanced construction.

Get the Catalog.

A Plea for More Shade Trees

The planting of a tree for shade, the placing of a shaded bench or anything that would conduce to the comfort of one's fellow-creatures was accounted in the middle ages an act of piety, springing from a gracious heart. In our day with its rush and pressure of business, we have little time to give to these gracious aspects of the more leisurely life and the old-time ideas are liable to be quite forgotten.

An hours' ride through any of our cities is sufficient to give the observer an absolute conviction of the need of a more liberal use of trees for shade and ornamentation. Art must win favor, architecture praise, but let us also "Consider the trees".

In days of extreme heat such as we have experienced this summer, when the sun's rays pour down on our streets, making them a veritable furnace to go through, what a difference in comfort it would make to have a shade tree wisely planted wherever space would allow. Of course in streets whose width is such as not to allow for traffic as well, this is out of the question, but how often one sees space where a row, group, or even a single tree could very well be planted, adding comfort and beauty to the surroundings, while in the case of many streets which run north-east and south-west a row of trees planted on the south-western side would be a real solacement.

We have not a vestige of an excuse for saying there is no room for trees on many of our streets if we will only consider for a moment the many forms of trees at our disposal. Is our space limited? Then use those trees which are more or less columnar in form such as the Lombardy poplar (*Populus fastigiata*), an excellent subject where quick growth is needed and one which will stand all the pruning you like to give it, while *Populus monilifera*, though not of upright form can be restricted by annual pruning to any extent.

Where a tree, columnar in growth and practically immune from the common insect attacks, is wanted, plant the male form of the Maidenhair tree (*Ginkgo biloba*), a tree of great beauty and one deserving of all that has been written in its favor. It is as yet but rarely seen as a street tree, but where it is it invariably seems to thrive as well as most trees. In the great family of conifers it holds a unique position, in that it is about the only member of it which can claim to be a good city tree.

Where space is such as to make the planting of large spreading trees admissible, we have quite a number to choose from. Among the most desirable are the Norway and sugar maples also the oriental plane, all of which are planted extensively and may be considered old friends, affording delightful shade with their great leaf surface. The European horse-chestnut is a grand tree where it is afforded space to develop its true form, its flowers in May vieing with many of our greenhouse plants.

Where trees of rapid growth are wanted for large spaces, *Catalpa speciosa* and the silver maple (*Acer dasycarpum*) commend themselves as worthy subjects. The former is exceedingly attractive when in bloom with its abundant panicles of white flowers.

The alleged difficulty experienced in establishing oaks is sometimes magnified. I think, for if the work of planting is done in a thorough manner by a thorough man who knows his subject, there would be less mortality and good results would generally follow, but often the one that does the planting never thinks of helping

the tree in its efforts to recover from the shock of removal by a wise pruning and mulching. Probably the best of the oaks for street planting are *Quercus rubra*, *Quercus coccinea* and *Quercus palustris*, all three being fairly clean trees whose foliage colors delightfully in the fall. Where a person wishes to plant for posterity nothing is more fitting than the oak whose spreading branches will still afford comfort and shade to our descendants and serve as a lasting monument to the memory of the planter.

Edwin Matthews.

Ginkgo biloba

I have followed with interest the notes on the *Salisbury* by Mr. Hans and Mr. Lonsdale. There are several points, however, wherein I do not quite agree with either.

One point that particularly interests me is the question of forms. Of the thousands I have seen growing in nurseries—and all have been grown from seed—90 to 95 per cent. are pyramidal or conical in form resembling very closely the well-known Lombardy poplar. All who have been in Washington, D. C., will recall the famous avenue of Ginkgos and these are, too, tall and pyramidal in habit. I am confident this form may be considered the type.

Mr. Lonsdale speaks of the trees around Horticultural Hall in Fairmount Park as illustrating an entirely new form and yet they are almost identical with what I consider the type, though I will say they are just a little more compact than usual.

Mr. Hans speaks of them as a good shade tree and as far as foliage is concerned, it is true, but I question their value in point of bushiness unless the trees are headed and compelled to spread.

When Mr. Temple introduced his "pyramidalis" the general comment was that it was far from being distinct and was more like the common type.

I have made inquiry among men who gather seed and find some interesting points. They all agree that wherever a seed-bearing tree grows the male form is present confirming the idea of the Ginkgo being dioecious. A singular thing about the female trees is that they are more open in habit resembling those illustrated with Mr. Hans' article. I cannot state whether this distinction exists in all seed-bearing trees and can be used as a means of distinguishing them.

It would be interesting to know if any readers have seen a tree, standing apart from others and yet bearing seed. It would have to be removed some distance as I believe plants standing in different locations will often be fertilized, despite the distance.

This was illustrated by two hollies which I know of, one continuing to bear seed year after year until the other—a staminate form—standing quite a distance away was destroyed from which date the first named failed to have berries.

parcels post will certainly be a great boon for the horticultural industries, and we hope our progressive Postmaster General may succeed in promptly putting this reform into operation. Opposition of the most strenuous character is sure to be encountered as soon as the advocates of a parcels post begin to get busy in Congress. We advise our readers to do what they can individually to stir up local sentiment in favor of the movement and see to it that their representatives in Congress are fully apprised of their earnestness in demanding favorable action on this long-deferred reform.

Help the local flower show

Is there to be a flower show in your neighborhood this fall? If so, be sure to give it open-hearted encouragement; if not, then make one of

your own in the way of a "fall opening" or something of that sort. Whenever and however there is launched any public project for an affair where plants and flowers are to be given prominence the man of all men who should take off his coat and give it a boost is the florist who depends for his business support upon the community interested. If there are others in the same line of business they should be induced to bear a hand also. The bid for future advantage should be made on the broad policy of bringing the goods rather than the individual directly to a position of higher favor in the public estimation. The first essential is to develop a demand for the goods and no agency that can be employed can compare with the local flower show as conducive to that end. Contribute, then, of your best and show the community the possibilities in advanced garden and house culture. Don't compete against them and thus discourage them; enter as "not for competition" and let them have the prizes. Your reward will come in another and more profitable form.

A question of the hour

A gardener of unquestioned ability, industry and good habits, with a fourteen-year record in his last position (commercial) called at our office recently in quest of a new situation. He told of having applied to the proprietor of a very large establishment and having been offered a position at \$1.75 a day. This is the price of unskilled Italian labor. The incident is not an exceptional one but the issue it brings up is one of very serious importance which is bound to find prominence in the immediate future. When we consider economic conditions as they exist today and think how far a dollar will go it must be plain to everyone except the man of frozen heart and iron hook that the wages of skilled gardeners, whether employed in a commercial or private capacity, are inadequate for the knowledge and service required, especially in the latter class. There is one quality in the good gardener that is rarely, if ever, paid for—one of which but few other industries can take advantage—the love for his work which is nearly always a part of his make-up. "To business that we love we rise betime, and go to't with delight," is a sentiment peculiarly applicable to the worker in horticulture. Long and irregular is the "day" of the gardener and of his brother the retail florist who rarely complains even when the day extends far into the night or because Sundays and holidays exact even greater sacrifice. For the well-being of the profession and that it may offer inducement to men of the highest ability to enter the ranks, and espousing the cause of the "square deal" for everybody, let us earnestly consider what can be done to take the gardener now and forever out of the "day laborer" class.

For a parcels post

Among the several postal improvements recommended by Postmaster General Meyer are a domestic parcels post and postal savings bank. The

Pear Blight

Pear blight has probably been the cause of more losses to California fruit growers than any other disease. In fact, its ravages have been so uncontrollable that the pear tree in many parts of the state, it a thing of the past. Thousands of dollars have been spent during the last few years in hopes that this disease would be checked. During the last three years the State University has had from four to six men in different parts of the State demonstrating by actual work the methods best adapted for its control. As this disease is also in the east, perhaps a few words upon its history, appearance and treatment will not be out of place.

Pear blight was first described by the Massachusetts Society for the Promotion of Agriculture in 1792. At this time it was discovered on some apple trees in New York State. Later it was found in Long Island, New Jersey and Pennsylvania. Its presence seems to be noticeable in many of the early orchards through the East and Middle West. It is interesting to note that it has never been found in Asia or Europe; the countries where the pear and apple tree are native. It is to be found not only on them, but also on the quince, hawthorne and wild plants of the pome family. It was not until 1878 that the cause of the disease was known and this was discovered by the pioneer plant pathologist, Professor T. J. Burrill. As new orchards were planted in the Middle West, the blight followed them, but it was not troublesome in California until the last eight or ten years. When it did gain entrance it made remarkable headway, due to the favorable climatic conditions for its growth. It is found upon all varieties of pears, but the Bartlett seems to be affected more than the others.

Pear blight is caused by bacteria (*Bacillus amylovorus*.) These microbes are extremely minute and can be seen only through a very high power microscope. They consist of a single elliptical or round like cell and are the smallest living vegetable organism known. So much for the history of pear blight.

ITS APPEARANCE

It is first noticeable in the spring of the year, a month or so after the blossoming period. If you will look at the flower clusters carefully you will observe that where the blight is present, they will look shrivelled up and those that are affected badly will appear as if dying, and upon these, small globules or drops of gum will be seen. In a short time you will probably observe the tips of the young shoots or twigs dying. If the weather conditions are favorable for its growth, these small twigs will not only die, but also the branches from which they grow. When the blight gains entrance to the larger limbs, it progresses very rapidly. When the bark is scraped off the diseased areas you will notice that the cambium layer, which is normally white, has turned red and where the bark is not too thick, large red drops of gum are exuding, later solidify and turn black.

As the disease progresses, it will not stop in the limbs but will continue to spread in the trunk and roots. The writer has seen the blight kill roots two and sometimes three feet under ground. Not only are the weaker trees affected but many times the best, largest and most healthful trees will succumb under its ravages.

TREATMENT

The treatment has been discussed before in this paper, so I shall not dwell upon this subject at any length. The only thing to do is to cut it out as fast as

it appears. If it has gained entrance in the twigs only—cut them off before it runs down into the larger limbs. If it is in the larger branches or trunk, cut out the affected portions. In dealing with this disease, great care should be taken to keep all the instruments well disinfected, as these are a quick way of spreading the blight. Corrosive sublimate is the best disinfectant to use. The cuts should also be washed with this material.

Conscientious work is the only way of controlling this disease and the lack of it is the cause of many failures.

S. S. Rogers.

Timely Chrysanthemum Notes

FEEDING.

As the plants are now getting to be a good size and the benches well-filled with roots, they will be in need of liquid feeding to give them the good stout stem, dark foliage and splendid flowers which we all look for with so much anxiety and interest.

The chrysanthemum grower can not be too careful in this matter, as a little carelessness will spoil a whole season's labor. There are several good chemicals on the market that can be used, but the chemicals in most general use are nitrate of soda, potash and sulphate of ammonia; if more than one of these are to be used they should be used alternately in the following proportion, one four-inch pot of chemical to a 50-gallon barrel of water if applied with an ordinary pump or watering can, but if a Kinney pump is used the amount of chemical should be doubled as the chemical is reduced to one-half the strength. This application once a week should be sufficient with a watering of good liquid cow manure given in between.

The plants should be gone over every two or three days, the side shoots taken off and the suckers cut away from the base of the plants to give the buds and foliage on the main stem all the nourishment possible.

FUMIGATING.

The plants should be gotten clear of all insects now if possible, for later on when the buds begin to show color all fumigating will have to be stopped.

The most effective method we find is to lay papers along the front walk big enough to hold a double handful of tobacco dust, say ten or twelve to a hundred-foot house making a small hole in the top of the dust and inserting a short piece of thick twine about an inch long to be used as a wick. Pour just enough kerosene on the string to ignite the dust, close the house tight letting it remain so until morning. If one fumigating does not destroy the flies this should be done two or three nights in succession. In buying the dust the grower should be sure to order the fumigating kind as the others will refuse to burn.

SUPPORTS.

The supports for the plants should be looked after and put in good shape so that they will be able to hold the flowers in position when they become fully developed, as the weight of a crop of flowers is far more than one would think.

Andrew McHenry

AFTER ADJOURNMENT.

C. L. Powell the florist, will open a floral salesroom in the Robert & Jones undertaking rooms on North Main street, Wednesday. Especial attention to weddings, party and funeral orders. Call and see us.—So. Bend (Ind.) Tribune.

We suppose there are people who would look upon an undertaker's room as an appropriate place in which to order wedding flowers, but it is the last place we want to have anything to do with.

Florists No More.

A sign painter was asked to call at a florist's shop in Columbus avenue. "I know what he wants," said the painter. "He wants me to paint out the word 'Florist' and substitute 'Floral Artist.' Every florist of any importance the town over has gone back on his former title. Just look at their stores and you'll see that. In all the streets where large flower stores abound it is almost impossible now to find a florist; they are all floral artists."

Thus saith the New York Globe. It's all right. We find now tonsorial artists, boot black professors, and so on, and why not equal honors for the aspiring flower seller. Columbus Avenue can supply all grades of them, too.

The Reverend Vicar-General of the Roman Catholic Diocese of New Hampshire has uttered a bitter denunciation of the custom of using flowers in connection with funerals. He characterizes it as a foolish fad and closes with the admonition: "Bring no more flowers here. Keep them from the church."

The futility of such tirades from men in whose hearts the tender chords are tuneless has been repeatedly demonstrated. They may exercise their authority to the extent of forbidding the bringing of flowers within the church doors, but the sympathetic sentiments which are at the foundation of the practice of placing flowers on the bier of loved ones are beyond the control of any human edict.

PERSONAL.

Colin Campbell of Montreal has returned from his trip to Scotland.

Mr. and Mrs. Robert Klagge of Detroit are sojourning in Buffalo at present.

Wm. G. Lehr and Miss Marie Bothe were married at Brooklyn, Md., on August 28.

Charles Howe, Dover, N. H., has returned home after a month's absence in England, France, Germany and Scotland.

W. J. Burnett has relinquished his position at Orange, N. J., with A. E. Van Gaasbeck and will go into trade with his father.

Henry Matz succeeds Mr. Brown as treasurer of the Nassau County (N. Y.) Horticultural Society, the latter having removed from Glen Cove.

William F. Bassett, florist of Hamilton, N. J., has just passed his 87th birthday and is the oldest male resident of the town. He is still in robust health and active in business.

ZONAL PELARGONIUM DAGATA.

M. Bruant's introductions are acknowledged to be the standard of geraniums the world over, and represent the highest development to which the geranium has attained at the present time. Among the newer varieties, especially in the Bruant race, are some which come the nearest to the American standard, and the grandest of these is unquestionably Dagata, the premier of the 1905 novelties, an illustration of which is given herewith. The plants are dwarf and compact, but robust in growth and the leaves are of a leathery texture, dark green with a slight zone, and measure sometimes as much as ten inches in diameter. The flowers are semi-double, of unusual

size and substance, and are borne in gigantic trusses resembling hydrangeas in size and produced in great profusion on long stiff stems.

The color is mauve rose, with a large white blotch at the base of the upper petals. Having all the good points of the Bruant race in habit, growth, resistance, ease of culture and uninterrupted blooming, Messrs. Vincent & Son, who are offering it in this country, feel justified in pronouncing Dagata the finest pink geranium for general use up-to-date. It has been favorably commented upon by the "Revue Horticole" and won highest honors at the International Exposition in Liege.

WIAntenock.

Our frontispiece gives a view of the new flower gardens at Wiantenock, the summer home of Mr. L. O. Peck, at Redding, Conn. From our correspondent, Mr. Thomas Leahey, to whom we are indebted for the photograph, we learn that Mr. Peck is one of the first New Yorkers to make a summer home in this beautiful section and that before his advent flower gardens and greenhouses were

practically unknown there. Now many families from New York are being constantly added to the colony and each year sees many additions to the summer cottages, with every prospect that in a short space of time this neighborhood will take its place as one of the most attractive and prosperous summer resorts in Connecticut. Looking south a fine view is obtained of Long Island Sound and to the westward may be seen historical Putnam Park, a beautiful reservation under the care of the State of Connecticut.

NEWS OF THE CLUBS AND SOCIETIES

NEW YORK FLORISTS' CLUB.

The September meeting of the club was held at the new headquarters, Murray Hill Lyceum, 160-164 East 34th street, last Monday evening, fifty-seven members being present. Among the features of the evening were an interesting address by Rev. McGee Pratt, the resignation of Treasurer Wheeler because of removal to California, and the selection of his successor, the enthusiastic reports of experiences at the Philadelphia convention by Messrs. H. A. Bunyard, John Young, C. H. Totty, P. O'Mara, John Birnie, Chas. Lenker, Harry Turner, J. B. Nugent and others, and the reading of a characteristic poem on the same topic by J. Austin Shaw. The handsome silver cup won by William Duckham in the Convention Bowling Tournament was on exhibition. For the unexpired term as treasurer W. F. Sheridan, J. K. Allen and John Donaldson were nominated. Mr. Donaldson withdrew his name and Mr. Sheridan was elected by the close vote of 23 to 20. S. A. F. President-elect F. H. Traendly addressed the meeting, urging upon every member the duty of taking an active part in making the convention at Niagara Falls next summer a credit to the city and state. The outing committee made its final report, turning in the sum of \$51.00 to the treasury, and was discharged with the thanks of the club for the manner in which they had fulfilled their arduous task. An amendment to the by-laws was presented for consideration at the October meeting, establishing life membership in the club at \$75.00. The treasurer's final report showed a balance of \$2,450.39 in bank to the credit of the club.

John Lewis Childs sent for exhibition a splendid collection of gladioli blooms, including such varieties as America, Alaska, Princeps, Mrs. Francis King and Blanche Melrose, which received an award of high commendation from the judges. Harry Turner of "Castle Gould" showed a set of six well-grown plants of *Celosia pyramidalis* in six distinct colors, which were given a well-merited certificate of merit.

The new rooms of the club are large and airy, with abundant light and everyone was delighted with their fitness for all requirements of the meetings.

NEW BEDFORD HORTICULTURAL SOCIETY.

At the monthly meeting of the New Bedford Horticultural Society held last Monday evening, the main topics for discussion were the staging of flowers for exhibition, with regard to effect and the necessity for the improvement in the quality of the dahlia by strengthening the stem—led by Wm. Keith,—and the use of herbaceous plants for cemetery planting—led by Thomas White.

Mr. White considered, that chiefly owing to their way of leaving a bare or untidy spot after the blooming period, the herbaceous plants were not an unqualified success for cemetery planting. In the discussion which fol-

lowed, some useful information as to the treatment of herbaceous plants was brought out. In the monthly exhibit a good number of dahlias and gladioli were shown, the main part of them by amateurs.

Owing to the slow manner in which the bills are coming in the executive committee were unable to make a report upon the late exhibition. While this laxity on the part of creditors is somewhat provoking, it shows that the credit of the society is good, locally at least.

THOMAS WHITE.

PITTSBURGH AND ALLEGHENY FLORISTS' AND GARDENERS' CLUB.

The members hurried through the routine business at the meeting Sept. 3d, for it was "Gladiolus Night" and all were anxious to inspect the beautiful exhibits.

Jno. Lewis Childs sent a large exhibit of his newer sorts, including Blanche, a large white flower in form and style resembling America, Harlequin, flaked, Los Angeles, Lydia, Spot, Contrast, a fine flower after the style of 1900, but a little lighter scarlet and the white in the throat more pronounced, Geo. B. Remsen, Cardinal, Melrose, Sulphur King, Sunlight, Gov. McCormick and Corsaire, a very dark red, and others; a very taking exhibit.

Frank Banning, Kinsman, O., displayed Augusta, America, No. 5, a beautiful unnamed pink seedling of large size, Canary Bird, Klondyke, Princeps, Mephistopheles, Octoroon, May, and Niagara, a very fine white, spaded yellow. This entire display was remarkable for the large spikes and thrifty appearance.

Nathan Smith & Son showed chrysanthemum Golden Glow. Buds taken July 1st, cut Sept. 1st.

Jno. F. Zimmermann, gardener at Dixmont Hospital, showed hibiscus, early flowering cosmos, scabiosa, zinnias, phlox, and other border plants.

Schenley Park, J. W. Jones, foreman, showed some good asters. One of the park employees declined to tell the composition of a solution used by him to keep the aster beetle from the flowers. This was the first time in the history of the club that any one present at a meeting has kept secret when questioned, any thing that would be for the good of the craft in general, and it created some little sensation.

When we took up the S. A. F. convention at Philadelphia, there was just one voice and that was of unstinted praise for Philadelphia hospitality.

Subject for the October meeting—Ferns.

H. P. JOSLIN, Secretary.

AMERICAN CARNATION SOCIETY.

For the meeting and exhibition in Washington, D. C., Jan. 28th to 31st, inclusive, 1908, the Henry F. Michell Co., Philadelphia, Pa., offer a silver vase, value \$40.00, for the best 100 blooms of carnations in four varieties, 25 blooms to a vase; competition open to private gardeners only.

ALPERT M. HERR, Sec.
Lancaster, Pa.

THE AMERICAN ROSE SOCIETY.

The Bulletin of the American Rose Society with the proceedings of the year, embracing the very able papers of Theo. Wirth, E. G. Hill and M. H. Walsh, is now in press and these papers with the discussions which ensued, in which some of the ablest men took part, including Messrs. W. C. Barry, W. H. Elliott, John Cook, Wm. A. Manda, Adolph Farenwald, E. G. Hill and P. O'Mara are well reported.

The certificates to be sent to life members and the certificates for exhibitors of new roses, will soon be mailed.

The Chicago people are already astir with promise of everything that can be asked for to boom roses in every shape at the next meeting and the western people say to the eastern folk "Join us with both hands."

BENJAMIN HAMMOND, Sec.

NEW ENGLAND DAHLIA SOCIETY.

The New England Dahlia Society held its first annual meeting in Horticultural Hall, Boston, on Sept. 4. These officers were elected: President, Henry F. Burt, Concord; vice-president, William F. Turner, New Bedford; secretary, Morris Fuld, 5 Union street, Boston; treasurer, N. Allen Lindsay, Marblehead.

CLUB AND SOCIETY NOTES.

The September meeting of the New Jersey Floricultural Society held at Orange on the 6th instant, was called to distribute the schedules of the Dahlia show planned for Oct. 4. There were but six exhibits and a scattering attendance.

The directors of the Arkansas State Floral Society have arranged to give prizes each year for the three most beautiful yards in Little Rock. A first, second and third prize will be given, the judges to be selected from the directors of the society. Appearances from the front of the yard to the middle of the street will be considered in awarding the prizes. Everyone can enter this contest, as the awards will be made on the artistic taste shown and the care exercised rather than on the money expended.

The Gardeners' and Florists' Club of Boston will hold its first meeting for the season on Tuesday evening, September 17, at 8 o'clock. Robert G. Leavitt of the Ames Botanical Laboratory, North Easton will deliver a lecture on hybridization. Mr. Leavitt is an expert on scientific topics as evidenced by the communications from his pen which have from time to time appeared in HORTICULTURE. Exhibits of geranium plants from young gardeners for prizes offered last fall will be made at this meeting. Other exhibits are also expected. The next "field day" of the club will be September 21, when a visit will be made to the dahlia farm of W. W. Rawson & Co., of Marblehead. Mr. Rawson will have a special car on the 12.43 train at North Station for Marblehead. Members and friends are invited to take this train; transportation will be free. Lunch will be served on arrival at Marblehead.

During Recess

*"Hang Sorrow; care will kill a cat
And therefore let's be merry."*

The Albany (N. Y.) Florists' Club held its first annual outing and clam bake on September 1. A number of Utica florists were present and all had a good time.

During the afternoon a spectacular game of baseball was engaged in upon the wide meadow below the grove. For over two hours a team representing the growers contested with a second team representing the retailers with the result that when the game came to a close at the end of the fifth inning the growers were ahead by a score of 13 to 6.

The battery for the growers was Gabriel of Rhinebeck and Richard of Watervleit, and for the retailers, Butts of Rensselaer and Thompson of Watervleit. The game settled a long standing score between the growers and retailers as the last game played between the two teams resulted in a tie.

Following the baseball game a short program of athletic sports was run off. In the fat men's race there were three contestants. They crossed the tape at the finish amidst the cheers of the onlookers in the following order: John Butts of Rensselaer, James H. Snyder of Rhinebeck and John Moran of Watervleit. The winner was awarded a box of cigars.

In the race for other contestants, Paul Gabriel of Rhinebeck came in first with John Warren of Watervleit and Arthur Smith of Slingerlands following in the order named.

In the hop, skip and jump contest George Russell was declared the winner, although no measurements were taken beyond comparing the distances between the heel marks in the turf. T. J. McDonough was second and Fred A. Danker, third. A palm was given to the winner of this contest.

In the boys' race, Abraham Myers came in first, August Eckert, second, and John McMahon, third. The winner was awarded a five dollar gold piece and the second contestant three dollars in cash.

The officers of the Albany Florists' Club are: President, William C. King; vice-presidents, Edward F. Meany and Frank M. Briere; treasurer, William C. Kurth; secretary, Thomas F. Tracy, Slingerlands, N. Y. The club was organized on April 29 of the present year and has a large and growing membership.

The annual outing of the employees of William Scott Co., of Buffalo, was held Wednesday, when 20 from Buffalo arrived on the noon train, and were met by the employees from Corfu. They had dinner at the Union Hotel. A ball game was played between the Buffalo employees and the Corfu employees, Corfu winning, 19 to 10.

A GROUP OF CANADIAN FLORISTS.

This is a group photograph of the members of the Canadian Horticultural Association in attendance upon their very successful annual convention at London, Ont., on August 29. It cannot be denied that they are a body of remarkably fine looking gentlemen and this includes two or three whom we recognize as not yet full-fledged Canadians. But where are the ladies? Our S. A. F. would as soon think of disbanding as to have its "pictur" took without an abundant admixture

of the fair sex. We understand that our sister society across the line will meet next year at the same place as the S. A. F. Let us hope that it will also be at the same date and the fraternizing will do us both lots of good. And if our Canadian friends are short of beautiful ladies to add grace and tone to their Niagara Falls photograph, perhaps we may be persuaded to loan them some that will fill the bill; but just for a few minutes only, for we can't spare them long.

PLYMOUTH EMULATES DAYTON.

In these days when we hear so much of the soulless corporations it is refreshing to have a chance to say a good word for one of them. The Plymouth Cordage Co., of Plymouth, Mass., held their fifth annual field day and exhibition on Labor Day, Sept. 2 and, despite the somewhat cloudy weather, they had keenly competed games in the morning and a baseball game in the afternoon between the team of employees and the Everetts of Everett, Mass. The exhibition is open only to employees of the Cordage Company and the prizes offered are for fruit, flowers and vegetables, industrial work, poultry, and cookery. To those of us who can recall the horticultural exhibitions of the old country (amateur section), it was decidedly a revelation to find competition so keen amongst this same class here, and to see the interest manifested and worked up to such a degree in the short period of five years. Not only are prizes offered as above noted, but prizes are also offered for best-kept gardens, best lawns of corporation houses and houses owned by employees. The company will supply on application seed and shrubs, and for this purpose have established quite a nursery of their own. The show of vegetables on this occasion, considering the dry season—a season that has been particularly trying to the grower in the sandy soil of Plymouth—was

by far the largest of the five exhibitions. One of the collections consisted of more than thirty different vegetables, prizes being offered for collections as well as individual exhibits. The fruit show was also very good, although perhaps other seasons have offered better showings in grapes and pears. One exhibit had a collection of ten varieties of pears and carried off the cup. In flowers there were many very interesting collections. The cut flowers were particularly good, and one exhibitor had a collection of sixty-six varieties and remarked that he was satisfied to have done this once, but it had cost him a great deal of time to get them all to look as well as they did. The industrial and kindergarten work was also most interesting as well as the children's department, where prizes were offered for cut flowers. It was certainly an exhibition that far exceeded anything seen anywhere in Massachusetts, and the credit for it lies wholly in the industry and ambition of the employees of this concern, spurred on by the genial and energetic treasurer, Mr. G. F. Holmes, who has been untiring in his efforts to promote the success of the annual field day, and who remarked that it was gratifying that their annual exhibition should have grown from what could be held in a large room of a private house to that of two large marquees in the short space of five years.

W. SKAKLE.

THE EXHIBITION SEASON

RECENT FLOWER SHOWS.

Floral Society of Avon.

The first annual exhibition of the Floral Society of Avon, N. Y., was held on August 28. The judges were Chas. Larrowe of Cohocton and E. A. Higgins of Avoca. It was a very successful affair and was largely attended.

Fairport Floral Society.

The Fairport Floral Society opened a splendid exhibition at Fairport, N. Y., on August 29. In nearly all of the 48 classes in the prize schedule there were many entries. George Arnold and Frederick Fisher were the judges.

Floral Society of Pittsford Grange.

The floral exhibition at Pittsford, N. Y., under the auspices of the Floral Society of Pittsford Grange which opened on August 30 was a big success and largely attended by town and outside people. There were 125 entries for prizes. It is very gratifying to note that the Patrons of Husbandry are giving attention to the beautiful as well as the useful products of the soil.

Grand Trunk Horticultural Society.

The fourth annual exhibition of the Grand Trunk Horticultural Society was held at Port Huron, Mich., on August 29 and 30. The display was staged in the literary and scientific institute, the interior of the building being a mass of flowers. M. Ullenbruck and Wm. Asman of Port Huron and A. McLean of Sarnia judged the floral exhibits. The vegetables were judged by A. Millett, T. Shumaker and George French. There were over 600 entries by 110 exhibitors and only employees of the Grand Trunk Railway Co. were allowed to compete for prizes.

Melrose Horticultural and Improvement Society.

The Melrose (Mass.) Horticultural and Improvement Society held their annual fall exhibition on September 7. Garden flowers such as phlox, gladioli, dahlias, begonias, etc., were shown in gorgeous array. Fruits and vegetables were also well displayed. Not the least among the attractions were the exhibits by the school children, among whom keen competition has been aroused in the raising for flowers and vegetables. The first prize for vegetables was won by a 13-year-old boy. The judges were S. Parker, D. F. Roy and N. S. Casey.

Southampton Horticultural Society.

The first annual flower show of the Southampton Horticultural Society was held in Agawam Hall, Southampton, N. Y., on September 5. It was a very creditable display many contributions being sent from the spacious gardens and greenhouses in the neighborhood.

Uncle Tommy Warren, the oldest inhabitant, whose age is over ninety, but who is still able to work in his garden, contributed by special invitation a sunflower plant with twenty-eight

blossoms on it. This was given a place of honor and received a special first prize.

The display of table decorations was very attractive.

The judges of the exhibition were William Gray, Owen Owens and James Gilfoyle, all of whom are gardeners. A special committee of ladies, consisting of Mrs. James L. Breese and Mrs. Charles Steele, were judges of the table decorations.

Massachusetts Horticultural Society: The Children's Exhibition.

That the summer vacation was not spent in play by some of the school children of eastern Massachusetts was evidenced in the remarkable showing made at Horticultural Hall, Boston, by the children at their annual exhibition of flowers and vegetables last Saturday. About fifty of the public schools were represented by displays and the individual entries besides were numerous. The products from these school and home gardens showed that the little gardeners had spared neither time nor love in their efforts to produce something creditable and many of the exhibits would have done credit to older hands. The exhibitors were all under 16 years of age—some very young, the winner of second prize for second collection of vegetables from a home garden being a little fellow only 5 1-2 years old. In the main classes ten prizes each were provided and in the others five prizes each, and all were worthily awarded, besides some special premiums. Anyone wishing to know how the girls and boys take to the school garden idea cannot do better than to visit one of these Boston children's shows. In interest they vie with the regular exhibitions of the Society and the products fully equal those of the adults. The children themselves swarm about the tables taking a keen interest and evincing a rivalry that shows how earnest they are in their efforts to excel.

Exhibition at Montreal.

On September 4th and 5th and 6th, the Montreal Horticultural Society and the Fruit Growers' Association of the Province of Quebec, held their annual show in the Victoria Rink, Montreal. The limited attendance, the scanty gathering of the public of Montreal is certainly to be regretted, because the number of attractions as well as the display of our exhibitors deserved much more interest than was shown. Mr. R. Wilson Smith, the zealous president, introduced the Hon. W. A. Weir, Minister of Public Works. In his brief speech, he said that the few acres of snow of Voltaire served to emphasize the prosperity of the Province of today and the present show was a credit not only to the growers, but also to the country. He then declared the exhibition formally open.

The competition in all the section was the closest of many years. Where four and five entries had been heretofore considered a keen contest, we had this year seven and eight. The

competitors arrived from all points of the Province—from Lennoxville, St. Bruno, Pointe Claire, etc.

The prize list is altogether too wide to give it in extenso. Here follow the principal sections:

Collection of decorative and flowering plants, 50 ft. square.—F. C. Smith, gardener to Sir W. Van Horne, 3 Adiantums,—1 W. J. Wilshire, gardener to Mr. R. B. Angus; 2 F. C. Smith. Adiantum Farleyense,—W. J. Wilshire. 3 Anthuriums, 1 W. J. Wilshire; 2 F. C. Smith. 6 Rex Begonias,—1 G. Vreugde, gardener to C. M. Hays; 2 F. C. Smith. 6 Tuberos Begonias.—1 John Piddick, Mount Royal Park; 2 J. C. Eddy, gardener to Mr. A. H. Sims. Begonias Gloire de Lorraine,—1 W. J. Wilshire; 2 J. Dunbar, gardener to Sir Montagu Allan. 3 Caladiums,—1 W. J. Wilshire; 2 F. C. Smith. 3 Crotons,—1 W. J. Wilshire; 2 F. C. Smith. 3 Dracaenas,—1 F. C. Smith; 2 W. J. Wilshire. Dracaena Specimen,—1 W. J. Wilshire; 2 F. C. Smith. 3 Ferns,—1 W. J. Wilshire; 2 F. C. Smith. Tree Fern,—1 W. J. Wilshire; 2 F. C. Smith; 3 G. Vreugde, Maranta.—1 F. C. Smith; 2 W. J. Wilshire. 3 Orchids,—1 W. J. Wilshire; 2 F. C. Smith. Orchid Specimens,—1 F. C. Smith; 2 W. J. Wilshire. Palms,—1 F. C. Smith; 2 W. J. Wilshire. 6 Plants for table decoration,—1 W. J. Wilshire; 2 F. C. Smith; 3 G. Vreugde. Stove-flowering plant in bloom,—1 W. J. Wilshire; 2 G. Vreugde. Coleus Specimen,—1 G. Vreugde; 2 C. A. Smith. Asparagus Sprengeri specimen.—1 G. Vreugde; 2 W. J. Wilshire. Pan of ferns for foliage,—1 W. J. Wilshire; 2 F. C. Smith. 50 Ferns, three in pots,—1 W. J. Wilshire; 2 F. C. Smith; 3 G. Vreugde.

In the cut bloom section the honors were divided between Messrs. C. Thomas Pewtress, C. A. Smith, G. Vreugde, G. Trussel, A. Cole, E. J. Hayward, J. C. Eddy, John Piddick, etc., etc. Outdoor grapes and under-glass grapes had a large exhibit. Vegetables and fruit were all closely contested by the above named gentlemen.

The principal attraction for the growers of plants was certainly the new sport of Lorraine, which received a certificate of merit. We'll hear about it later.

Awards at the Boston Exhibition.

At the Dahlia Show of the Massachusetts Horticultural Society, of which an account was given in our issue of last week, the following awards for flowers were made.

Flowers.

Dahlias.—Show, twenty-four blooms, named varieties: 1st, Mrs. H. A. Jahn; 2d, Johnson Hall; 3d, Edgar W. Ela. Show, twelve blooms: 1st, W. H. Symonds; 2d, J. H. Flint; 3d, J. H. Flint. Fancy, twelve blooms: 1st, Edgar W. Ela; 2d, J. H. Flint; 3d, W. D. Hathaway. Cactus, twenty-four blooms: 1st, W. W. Rawson; 2d, Edgar W. Ela; 3d, N. A. Lindsey. Cactus, twelve blooms: 1st, Johnson Hall; 2d, Mrs. T. O. Richardson; 3d, W. H.

Symonds. Decorative, twenty-four blooms: 1st, Mrs. H. A. Jahn; 2d, W. W. Rawson; 3d, W. D. Hathaway. Decorative, twelve blooms: 1st, Edgar W. Ela; 2d, W. H. Symonds; 3d, Mrs. L. M. Fowle. Pompon, twenty-four vases of three blooms each: 1st, W. W. Rawson; 2d, J. K. Alexander; 3d, W. D. Hathaway. Pompon, twelve vases of three blooms each: 1st, Mrs. L. M. Towle; 2d, Edgar W. Ela; 3d, Mrs. H. A. Jahn. Single, twelve vases of three blooms each: the 3d prize to Edgar W. Ela. Largest and best collection of named varieties, one vase of each: 1st, W. D. Moon; 2d, Mrs. L. M. Towle. Hardy Herbaceous Flowers.—Thirty bottles, distinct species and varieties: 1st, Blue Hill Nurseries.

Fruit.

Foreign Grapes.—1st, Mrs. J. C. Whitin. Apples.—Gravenstein: 1st, L. F. Priest; 2d, Mrs. A. F. Esterbrook; 3d, H. A. Clark. McIntosh: 1st, Wilfrid Wheeler; 2d, L. F. Priest. Porter: 1st, Wilfrid Wheeler; 2d, W. Heustis & Son; 3d, G. V. Fletcher. Any other variety: 1st, H. A. Clark, Williams; 2d, L. F. Priest, Wealthy; 3d, L. F. Priest, Nyack; 4th, E. E. Cole, Alexander. Pears.—Bartlett: 1st, H. A. Clark; 2d, F. W. Dahl; 3d, G. V. Fletcher. Any ripe variety, Bartlett excepted: 1st, F. W. Dahl, Clapp's Favorite; 2d, G. V. Fletcher, ditto; 3d, F. W. Dahl, Giffard; 4th, F. W. Dahl, Dearborn's Seedling. Plums.—1st, W. P. Hutchinson; 2d, G. V. Fletcher. Single plate of any variety: 1st, O. B. Kenrick, Bradshaw; 2d, G. V. Fletcher, ditto; 3d, E. B. Parker, ditto. Japanese Plums.—Burbank: 1st, Wilfrid Wheeler; 2d, D. L. Fiske. Collection.—1st, E. B. Parker; 2d, W. P. Hutchinson; 3d, D. L. Fiske. Single plate of any variety: 1st, W. G. Kendall, Burbank; 2d, O. B. Kenrick, ditto; 3d, E. B. Parker, Shiro. Native Grapes.—White: 1st, W. G. Kendall, Green Mountain; 2d, J. S. Chase, ditto.

Vegetables.

Beans.—Lima. 1st, W. J. Clemson; 2d, Ed. Parker; 3d, G. B. Gill. Beets.—1st, E. L. Lewis; 2d, E. L. Lewis; 3d, W. Heustis & Son. Cabbages.—1st, E. L. Lewis. Celery.—1st, Edwin L. Lewis; 2d, W. J. Clemson; 3d, Alice A. Warburton. Melons.—1st, Edwin L. Lewis; 2d, Edwin L. Lewis. Watermelons.—1st, Edwin L. Lewis; 2d, Ed. Parker; 3d, Joseph Thorpe. Onions.—1st, W. J. Clemson, Prize Taker; 2d, Edwin L. Lewis, Giant of Gibraltar; 3d, Edwin L. Lewis, Prize Taker. Parsnips.—1st, W. J. Clemson, Hollow Crown; 2d, Edwin L. Lewis, Dobbin Selected; 3d, W. J. Clemson, Long Smooth. Squashes.—1st, Edwin L. Lewis, Marrow; 2d, Edwin L. Lewis, Hubbard; 3d, Ed. Parker, Turban. Tomatoes.—1st, Ed. Parker, Stow; 2d, Frederic Cole, ditto; 3d, Edwin L. Lewis, ditto. Collection.—1st, Edwin L. Lewis; 2d, Ed. Parker.

Certificates.

First Class Certificates of Merit:—B. Hammond Tracey, Seedling Gladiolus Kathryn; also for Gladiolus Princess Sanderson and Gladiolus Jean Dieu la Foy; Frederick J. Rea, *Helenium autumnale superbum rubrum*; J. L. Smith, superior cultivation of *Nephrolepis Barrowsi*; A. H. Win-

gett, Scerling Dahlia "Charles Lanier;" Sidney Hoffman, artistic arrangement of Dahlias; Mrs. J. C. Whitin, Diamond Jubilee Grape.

Honorable Mention:—B. Hammond Tracey, Seedling Gladiolus Harvard; Henry A. Dreer, *Nephrolepis Todeaoides*; also for *Nephrolepis Amerpohli*; R. & J. Farquhar & Co., display of *Lilium auratum*, *L. tigrinum*, *L. speciosum*, and *L. Philippine*; Laban Pratt, display of Single Dahlias; W. W. Rawson, display of Dahlias.

COMING FLOWER SHOWS.

Nassau County Horticultural Society.

The Nassau County Horticultural Society will hold a special dahlia show in connection with its October meeting at Glen Cove, N. Y.

State Floral Society of Arkansas.

The State Floral Society of Arkansas is planning for an elaborate exhibition to be held at Little Rock on November 14, 15 and 16. Among the prize cups offered is a handsome one by J. W. Vestal & Son, the florists.

Lenox Horticultural Society.

The Lenox (Mass.) Horticultural Society will hold an exhibition of chrysanthemums, plants, orchids, roses, carnations, fruit and vegetables on October 23 and 24. For detailed information address the secretary, George H. Instone, Lenox, Mass.

Wappingers Dahlia Society.

The Wappingers Dahlia Society will hold its seventh annual exhibition at Park Hall, Wappingers Falls, N. Y., on Friday and Saturday, September 20 and 21. The schedule is quite unique in many of its 125 classes. Lenox Banks, New Hamburg, N. Y., is the secretary.

New Jersey Floricultural Society.

The annual Dahlia Exhibition of the New Jersey Floricultural Society will be held in Elk's Hall, Orange, N. J., on Friday evening, October 4. There will be no cash prizes but two classes of awards will be given, viz.: First-class Certificate and Certificate of Merit. The secretary's address is Henry Halbig, 35 Valley street, Orange, N. J.

Newport Horticultural Society.

On September 17, 18 and 19 the Newport, (R. I.) Horticultural Society will hold its Autumn exhibition at Masonic Hall, Newport. There are 77 classes in the schedule copies of which may be had by addressing the secretary, David McIntosh. This show is always notable for its fine groups of decorative foliage and flowering plants and made-up baskets and other floral arrangements.

Tarrytown Horticultural Society.

The ninth annual exhibition of the Tarrytown Horticultural Society will be held at Music Hall, Tarrytown, N. Y., on Wednesday, Thursday and Friday, November 6, 7 and 8. Schedules of this important show may be procured from E. W. Neubrand, secretary. There are no less than 27 special prizes—silver cups and cash—besides the 65 regular premiums, and lively competition is assured. Entries

must reach the secretary before Nov. 2.

Massachusetts Horticultural Society.

The annual chrysanthemum show of the Massachusetts Horticultural Society will take place at Horticultural Hall, Boston, on Friday, Saturday and Sunday, November 8, 9 and 10. The prizes offered amount to \$1000, in addition to a number of gilt, silver and bronze medals. The plant entries at Boston are acknowledged to be the finest in the country every year and those who like to see these remarkable examples of cultural skill will find this exhibition worthy of a visit. Prize schedules may be had by addressing secretary Wm. P. Rich, Horticultural Hall, Boston.

Maryland State Horticultural Society.

The annual meeting and exhibition of the Maryland State Horticultural Society will be held in the Fifth Regiment Armory, Baltimore, Md., on December 3 and 4. This hall containing 62,000 square feet of floor space will afford ample opportunity for making the greatest horticultural show ever held in the State of Maryland, and that is what the managers aim to accomplish. There are some special premiums, such as the Baltimore News prize for group of decorative plants, the Mrs. Garrett prize for groups of ornamental evergreens, silver medal for best new fruit or flower not disseminated, etc., and a long array of regular prizes. Intending exhibitors should send to the secretary, Thomas B. Symons, College Park, Md., for a copy of the prize list.

APPRECIATED IN INDIANA.

Horticulture Publishing Co.,
Boston, Mass.

Dear Sirs:—Enclosed you will please find check for amount due you to date. Please accept our thanks for waiting on us and for the large amount of inquiries and business your magazine has sent to us. Surely the little ad. we placed with you has done us a lot of good and as we can not keep up with the orders at present we will kindly ask you to discontinue the ad. until we notify you again later on.

Respectfully yours,

THE HEIM SUPPORT CO.

KOCHIA SCOPARIA VAR. TRICOPHYLLA.

A transatlantic contemporary ("Horticulture") enquires for light on the naming of *Kochia scoparia*, which name, it discovers, has been suppressed by European firms in place of *tricophylla*. The reason of the change, we believe, is that *K. scoparia* was found, upon investigation, to be a tall, lax growing plant with much darker foliage than the new, columnar, bright green subject which we first heard of as *K. scoparia*. The name *tricophylla* was therefore appended to mark a varietal distinction.—Journal of Horticulture.

FOR HORTICULTURAL EDUCATION IN THE PUBLIC SCHOOLS.

The following is a copy of the preamble and bill making horticultural education in the public schools mandatory upon State Boards of Education as proposed by the S. A. F. committee and reported by the chairman, Mr. E. V. Hallock, at the Philadelphia Convention:—

The movement to establish school gardens has already been put in force successfully and according to original ideas. In every case the school garden has proved more beneficial even than was expected, opening a new and attractive and useful field of study to the pupils, giving them healthful exercise, and providing them with manual training in connection with mental work, which is said to increase the efficiency of mental effort as much as thirty per cent.

Its advantages are almost too apparent to repeat—uplifting in morals, and changing as if by magic the exuberance of youth from mischievousness into interesting and useful channels. It has proved to have almost eradicated the spirit of lawlessness and destructiveness, or changed it into a sense of possession and a desire to respect the rights of others as the possessor would have his own rights respected.

The material benefit derived from gardening can be made to change the entire mode of living of a family, making possible the saving of large sums of money otherwise expended for fresh meat and canned goods, and being at once a stop-gap of outgo, and providing a healthful diet, which is little appreciated when never tried. Millions of dollars in each state could be saved to the laboring man—and the man of means also—by a surprisingly small effort, if properly directed.

In this era of trusts and the raising of prices, the garden is the poor man's answer. Thousands of acres of land that lie fallow in every state of the Union, producing nothing, worth nothing, could be changed in one short year to produce millions of dollars, all going toward the betterment of the poor, or comparatively poor, man. We have the land, and the sunshine too, and the intelligence of man—all these are free and can be turned into incalculable value with slight direction of the controlling power of the state.

If the youth of the country can be made to see the broad benefits derived from horticulture, and the interest, desire and love for this work be implanted in their hearts, usefulness will take the place of vandalism, and interesting exercise the place of pernicious activity.

As every native-born child and all foreign-born children up to a certain age pass through the portals of our schoolhouses, it stands to reason that here is the place to teach them what will be of so much use and importance in their life-long welfare.

We believe that the teaching of horticulture, and the rousing of interest in the pupils' minds as to its possibilities, has a strong bearing upon the welfare and contentment of the people, and will tend to allay the present spirit of unrest which seems to pervade all ranks.

Therefore we submit the following as a bill to be introduced into the Legislature of the State of —

Resolved, That the teaching of horticulture by simple practical methods in the public schools of the State of — become a law of the State; and that the Society of American Florists be empowered to put this law into operation, with as little disturbance as possible of the present course of study, and with the aid of the most experienced people in this line who will be in close connection with the heads of Agricultural Schools and Colleges and Experiment Stations throughout the country.

Resolved, also: That this law be put in force the second year after the passing of this bill.

Signed:

E. V. HALLOCK, Chairman.
BENJ. HAMMOND.
ALEX. WALLACE.
F. E. PALMER.
J. F. COWELL.

OBITUARY.

Peter La Pointer a florist, sixty years old, of Eureka, Cal., died suddenly on August 27 at Los Angeles.

Dominick McDavitt, a landscape gardener of Danvers, Mass., was killed while alighting from a train, after bidding goodbye to some departing friends at the railroad station in Salem, on Sunday evening last. He was about 70 years of age, and a member of Post 90, G. A. R.

Charles Callice, florist, of Far Rockaway, N. Y., died at St. Joseph's Hospital on September 3 after suffering a short time from diabetes gangrene, at the age of seventy years. The funeral was held on Thursday and the interment took place in the Lawrence Cemetery.

Wm. O'Hara, a prominent and highly respected florist and gardener of Huntington, N. Y., died on September 6, after a three days' illness with pleuro-pneumonia, aged 59 years. Mr. O'Hara was born in Ballyvary, Ireland. In early life he worked at gardening at Lancastershire, England. In 1870 he came to this country and settled in Boston. Fall River was his home for a time, but he soon went to New York City. For four years he was foreman for the late Henry G. Scudder, at East Neck. He was on the estate of the late Dr. H. A. Belt, at Livingston Manor, N. Y. About 1878 he went to Huntington and in 1888 established the florist business which he conducted at time of his death. He is survived by a wife, who was Miss Julia Whalen, to whom he was married in 1878.

Seed Trade

We acknowledge receipt of the report of proceedings of the 25th annual convention of the American Seed Trade Association, held at New York June 25-27, 1907. An excellent likeness of the retiring president, Henry W. Wood, forms the frontispiece. All the addresses, papers and reports, with discussions thereon, are given in full, and the publication is altogether an interesting narrative of a most interesting event.

One or two pea and bean growers have been sending out preliminary estimates of deliveries on this season's pea crops, and while they are much below 100 per cent., they are in most instances higher than will be eventually delivered. At least, this is the opinion expressed by one of the leading growers. This grower furnishes the following percentages as his probable deliveries: Pride of the Market, 1 to 20 per cent.; Improved Stratagem, 15 to 20 per cent.; Abundance, Horsford's Market Garden and Advancer, 50 to 60 per cent.; Alaska, 50 to 70 per cent.; Duke of Albany, Telephone and Admiral, 60 to 70 per cent.; Extra Early, 70 to 80 per cent.; Gem and Excelsior, 60 to 70 per cent.; American Wonder, 60 to 70 per cent.; Gradus, 40 to 60 per cent.; Thomas Laxton, 50 to 70 per cent.; Yorkshire Hero, Everbearing and Champion of England, 70 to 80 per cent.; On such varieties as Sultana Excelsior, Alderman, Senator no estimates have been named, nor on Canada Field.

No estimates on beans have yet appeared, and those who have been asked decline to make any, claiming it is yet too early to give any reliable figures.

Cool weather, particularly the nights, has been the rule for the past ten days, and light frosts have been reported from various places, though so far as ascertained not heavy enough to materially damage corn, which will probably be a poor crop from, and including northern Ohio east. Over most of this area a severe drought has prevailed which has only been broken within the past few days, too late to be of any great benefit excepting to fall-sown crops and grass. Within the next week or two something more definite on corn, potatoes and other crops will be given.

✶

The vacation season is about over, and soon again seedsmen will be at work preparing for another season's business, and it is a satisfaction to note that the horizon is clear, and every indication pointing to another prosperous year. While staple crops are more or less below average, the shortage in most cases will not approach a famine, and prices, while above the normal, should not be unusually high. Altogether, the situation appears to be nearly ideal for the seedsmen, and with general prosperity unabated, the future certainly looks rosy. It is well not to be over-exalted, as clouds may appear on the sky, but just now there are none in sight, and we may as well enjoy the sunshine and not borrow trouble.

MICHELL'S LILIUM HARISSI

The old favorite Easter Lily, too well known to need description, except to say, that in our Special Brand Strain we offer something decidedly Superior, being Larger, Healthier, and Better than those usually sold. Each year sees our importations increase in great proportions. All Lily Bulbs are Fully Matured and up to size. Our aim is to give the largest possible value for the money.

Our Fall Price List of Bulbs Now Ready

HENRY F. MICHELL CO., 1018 Market St., PHILADELPHIA, PA.

F. G. Johnson, of Columbus, Ohio, who for over twenty years has been with the Livingstone Seed Company of that city, has associated himself with S. M. Isbell & Co., of Jackson, Michigan. Mr. Johnson was the treasurer of the former firm, and will be a most valuable addition to the Isbell forces.

The Stumpp & Walter Co., at 50 Barclay street, New York, will have a most attractive and commodious store, when the improvements and alterations now being made are completed. They will then occupy the entire building of five stories and basement, which space their growing business most certainly needs.

It is reported that A. M. Rennie of Providence, R. I., succeeds to the position of manager of Vaughan's Seed Store, New York.

AMERICAN SEED TRADE ASSOCIATION.

President Geo. S. Green has made the following appointments:

Delegates to National Board of Trade—W. Atlee Burpee, Albert McCullough.

Delegates to National Council of Horticulture—J. C. Vaughan, C. E. Kendel.

Delegate to National Flower Commission—W. F. Jones.

Delegate to National Irrigation Congress—Lester I. Morse.

Committee on Seed Legislation—Chas. A. Heath, chairman; Chas. N. Page, F. W. Polgiano, Albert McCullough, S. F. Willard.

Committee on Weights and Measures—C. S. Burge, chairman; John T. Buckbee, Wm. G. Scarlett.

Committee on Customs and Tariff—W. H. Grenell, chairman; Chas. H. Breck, Alexander Forbes.

Committee on Postal Laws, etc.—Charles N. Page, chairman; J. T. Buckbee, J. C. Vaughan, E. L. Dungan, L. L. May.

Committee on Experiment Stations—W. D. Ross, chairman; S. E. Briggs,

D. I. Bushnell, Burnet Landreth, J. W. May.

Committee on Governmental Seed Distribution—Alex. Forbes, chairman; C. P. Wood, W. Atlee Burpee, W. H. Maule, F. W. Polgiano.

Committee on Transportation—Geo. B. McVay, chairman; S. G. Courteen, J. G. Peppard, J. J. Buffington, C. C. Cropp.

Committee on Seed Adulteration—Albert McCullough, chairman; A. D. Heffron, C. S. Burge, Henry Nungesser, Henry W. Wood.

Committee on Revision of Code—Walter P. Stokes, chairman; Horace E. Conklin, Marshall H. Duryea.

CATALOGUES RECEIVED.

Eastern Nurseries, Jamaica Plain, Mass.—Advance evergreen list.

Nathan Smith & Son, Adrian, Mich.—Wholesale Fall List of Phloxes, etc.

Schlegel & Fottler Co., Boston, Mass.—Fall Catalogue of Bulbs and Plants. This is a neat, concise publication, typographically creditable and half-tones well brought out. A view in the sunken garden at Fairmount Park forms the cover illustration.

A. T. Boddington, New York.—Autumn Catalogue of Bulbs and Seeds. Has a Bunyard cover design of artistic merit and appropriateness. The contents give Boddington's Quality Bulbs an appropriate presentation. Appended is a very complete list of hardy perennial seeds.

Dingee & Conard Co., West Grove, Pa. New Guide to Rose Culture, autumn 1907. A nice entertaining list of promiscuous plants, with colored illustrations of guava and carnations on front and back cover. Contains 44 pages, of which five are devoted to a list of roses.

R. & J. Farquhar & Co., Boston.—Autumn Catalogue. This is the finest of the fall catalogues which have come to our notice. The cover is superb,

BAMBOO CANES TOUGH AND STRONG

6 ft. long—\$1 per 100; \$6 per 1000; \$11 per 2000

They cost about 10 per cent. more than other kinds, and they are 10 times better.

STUMPP & WALTER CO., - 50 Barclay St., New York

showing a group of daffodils on the front and a cluster of tulips on the back, all done in colors and beautifully finished. Many of the half-tone illustrations are new and all are of the highest workmanship. Tulips, narcissi, lilies and irises are given especial attention in the bulb department, and the list of new and choice hardy border plants is very complete

Otto Katzenstein & Co., Atlanta, Ga.
—Trade price list of tree and shrub seeds, roots and bulbs.

Bay State Nurseries, North Abington, Mass.—1907 Price list of trees, shrubs, roses, vines and herbaceous perennials "For gardeners and owners of estates only." This is an extensive list comprising all that is best in hardy material for home decoration.

PUBLICATIONS RECEIVED.

Dictionary of the principal terms employed in botany and horticulture, by A. M. C. Jongkindt Coninck, Director of the School of Horticulture at Bussum, Holland. This is a revised edition of the original publication, issued in 1894. The terms are given in tabulated form in Latin, Greek, French, English, German and Dutch. It is published at the price of four francs.

Year Book of Audobon Park, New Orleans. This is an occasional publication, ten reports having been issued since 1890 by the Audobon Park Association which has the management of this public recreation ground. The excellent full-page half tones with which the book is embellished show forth the semi-tropical beauties of the place, an avenue of live oaks heavily festooned with southern moss being particularly impressive.

Twenty fourth annual report of the Board of Park Commissioners of the City of Minneapolis. This report comes with compliments of Superintendent Theodore Wirth and is a gem in its typographical work and illustration. It is exceedingly interesting and full of instructive suggestion for those intrusted with the care of public reservations as might naturally be expected in anything from the pen of Mr. Wirth who is recognized as one of the foremost exponents of practical park work as applied to the public needs of today. The extensive work being done in the construction of a noble system of parks for Minneapolis is well displayed in a number of detail maps and diagrams.

AN IMPORTANT NEW BOOK ON PLANT BREEDING.

Much as the practical man is prone to lack in respect for the "theoretical" and the "scientific," it is rapidly coming to be understood that the highest success in agriculture and horticulture can be achieved in these days only by means of a very thorough knowledge of the nature of plants and animals. After all, science is but the systemization of the kind of knowledge which the "practical" man accumulates from experience and from tradition. Botany has learned much from the "unscientific" plantsman; only it has gone much further in most directions than he has, and has combined sorts of information which to the grower are either unknown or unrelated. The trouble with botanical science—from the grower's point of view—has been that the theoretical man has cared more for theories than for results. Nowadays this condition is rapidly changing. The two kinds of workers are joining hands, and the good effects begin to be seen. The practical horticulturist can no longer afford to stand apart. The rule of thumb is out of date. It's too short to measure the distances covered by present-day progress.

Possibly the most important advances in agricultural and horticultural methods, which mark our era, are those in improvement of plant breeds. The purpose of this article is to call the attention of plantsmen to a book just published by Hugo de Vries, with the title "Plant Breeding." De Vries, as many readers know, is not primarily a grower or improver of races of plants. But as Professor of Botany in the University of Amsterdam he has been a devoted student of heredity for many years. He rediscovered Mendel's work and showed its importance. He has written the most talked-of book on Evolution which has been published since Darwin. His theory of the change of characters in plants is called the Mutation Theory, according to which new characters are not gradually built up by slow change and selection, but appear suddenly by leaps, or "mutations;" as the practical grower would say, they appear as sports. New races of plants come suddenly, according to De Vries. Moreover, many, if not most species, according to him, consist of a mixture of races, or little species. In working out his ideas De Vries, like Darwin, has constantly referred to the history of horticultural plants, and moreover has for many years actually experimented on heredity in the botanic garden at Amsterdam. Horticulture and agriculture have served him in the cause of science. His latest book, named above, is written in the service of these arts. It makes clear a most important principle in plant breeding, by the best of all methods, namely, that of concrete example.

De Vries describes the work of several eminent breeders, especially Nilsson and Burbank, the achievements of the former being probably more important to the race at large, though less spectacular, than those of the Californian. The work of the Swedish breeder also has this cardinal virtue, that it has been conducted with system, every step being known and

recorded, and the principles discovered therefore stand forth as clear as day, so that the work may be repeated and applied at large by anyone. The material that Nilsson has worked on chiefly—the cereal grains—has been also most difficult of treatment, and the problem, vastly important it is to mankind, could only have been solved in its entirety by the scientific methods in use at Svalof.

Nilsson has been Director of this Swedish Agricultural Experiment Station since 1890. In 1886 the Swedish grains were found to be deteriorating and a society was formed in the village of Svalof in southern Sweden, for the introduction, testing, and improvement of the best foreign sorts. The first work of the society was conducted along the lines of the German grain-breeders. In brief the German method was—and is—to select from a field of growing wheat, oats, or rye, numbers of the best stands showing the largest ears with the most kernels, or manifesting in a high degree whatever quality is sought for. This handful of plants, the elite, becomes the basis of the seed crop of the next year. Some improvement is expected each season; and in fact in this sort of selection considerable success has been attained in the evolution of improved grains. The seedsmen have always recommended the purchase of seed from their own establishments on the ground that only by the continued selection of elite strains could purity and standards of productiveness be maintained.

This method was practiced at Svalof when Dr. Hjalmar Nilsson, the present Director, took charge, in the year 1900. His first discovery was the inadequacy and the uncertainty of the method. Selection resulted only rarely in any marked success. It was found in certain cases that qualities of a particularly desired kind—for example stiffness of stalk in oats—could not be induced by the most persistent efforts. Moreover, Nilsson found that the plots of grain sown from elite strains were not uniform, or pure. The impurity of the strains was, it is now thought, the source of deterioration in crops and of defeat in the experiments.

Nilsson's first important observation, was that among the thousands of cultures, some few were found that appeared to consist of only one type. As elaborate records of all the original samples of seed has been kept, Nilsson was enabled to ascertain the cause of the purity in these exceptional cases. According to the accepted method each sample had consisted of a certain number of ears which were as similar to one another as could be expected, and which were therefore simply assumed to belong to the same type. But of course the number of ears had been different in different groups, some being numerous and some rare. Among the latter some had been met with in only a single head. As a record has always been kept of the exact number of heads used, it could be made out to how many original heads pure cultures were attributable. It proved that the exceptional lots were descendants of single heads in each case.

This almost accidental discovery, in the summer of 1892, suggested the way to a new method of experiment, when

the capabilities of the older one seemed almost exhausted. In the harvest of that year, search was made for new starting points. This time single heads—in all about 2000 different heads and panicles, representing as many divergent types as possible, were selected.

The results of this trial exceeded all expectation. For example, among 422 cultures of oats, 397 were pure, only 25 multiple. The exceptions were thought to represent hybridizations; and of course this possibility in all the cases made one further selection, of separate heads in each case, necessary. But the high degree of uniformity in the cultures of 1893 advanced the principle of the selection of single individuals as a reliable source of purity to the rank of an experimentally established fact.

From this fact it could be further deduced that repeated selection, such as that required in the method of elite races would be unnecessary—hybridizing effects aside. The uniformity was in fact such as to make a further selection impossible. The differences which formerly existed within the cultures were now found to exist only between the different groups, which now could serve as the material of selection.

From the industrial side the principle of the sufficiency of one original selection has a high value, for when once the desired kind of purified grain has been adopted, no further selection of seed is required to keep the race up to standard of productiveness, as in the older method.

But purity is not all that is sought. Excellence is the object of the culturist's search. The question arose whether the separate cultures would possess sufficient variety of qualities and excellences to afford the basis of further advances. The results of the sowings of 1893 showed that their mutual differences were much greater than could be surmised from an inspection of the original confused stock. The separate cultures compiled with the most diverse requirements, some being highly resistant to frost, others to disease, some being suited to light, other to hard soils, some being early, other late in ripening, some excelling

in the rigidity of their stalks, the length of ear, number of grains, etc.

The process amounted, then, to the sifting out of the elementary races composing the supposedly pure, but really heterogeneous, races of preceding breeders. This has been accomplished on the principle of individual selection. The number and variety of these elementary races is unexpectedly rich, and adequate to supply almost any demand which can be pointed out. Of course the testing of their various productiveness and their adaptability to diverse condition of the Swedish territory has been and continues to be the further work of the station.

But the range of elementary races is not limited by the numbers already demonstrated in the segregating process. From time to time in the pure strains single aberrant individuals appear, sports as they would be called by most growers, "mutants" as de Vries calls them. These are carefully saved and made the starting points of new cultures. From such an origin, for example, have come the best among all the novelties of winter wheat. The carefully kept records of these instances in which the exact origin of new races is known, are of course of very great interest to the student of evolution; and, it may be added, they seem strongly to support de Vries's Mutation Theory.

The prolificness of the new procedure is seen when we learn that as soon as the preliminary work in method and testing had been done, in 1901, 18 excellent new varieties were offered to the trade. Among them were 5 kinds of wheat, 6 of barley, 3 of oats, and 4 of vetches—for the experiments have not been entirely confined to cereals. Each year some new varieties are added to the stock. This is in contrast to the old method in which the successes were in comparison few and far between.

De Vries reviews also the methods of Le Conte, the pioneer in improving by selection, Shirreff, Hallett, Hays of Minnesota, von Lochow, and as already said, the German seedsmen. Burbank's work is described from the author's personal observation, and its principles analyzed. A long chapter on Association of Characters contains much that is interesting to plantmen. The whole, moderate-sized book, is written in a clear, non-technical, and interesting style. I shall feel that I have rendered some service to the cause of applied science if my review of the book leads readers of HORTICULTURE to study its pages.

THE HORTICULTURAL SOCIETY OF NEW YORK.

Preliminary program of the International Conference on Plant Hardiness and Acclimatization to be held October 1, 2 and 3, 1907, in the rooms of the American Institute and in the Museum Building, New York Botanical Garden.

Tuesday, October 1—10 o'clock A. M. Organization of the Conference. Address by the President of the Horticultural Society of New York. Reading of papers: 10.30 A. M.—12 M., and 2-5 P. M.

Wednesday, October 2—(Excursion. Details will be announced at the meeting of October 1.)

Thursday, October 3—10 o'clock A. M.—(New York Botanical Garden, Bronx Park.) Meetings for the reading of papers in Museum Building: 10 A. M.—12 M., and 2-5 P. M.

List of Papers.

The following partial list of titles which have been promised will serve to indicate the general scope of the subjects that the Conference will cover, and the Committee of Arrangements will be glad to receive promises of other titles or suggestions from people who are interested. Communications should be addressed to the Secretary.

It is planned to publish in one volume a complete report of the proceedings, which should be an important contribution to the literature of horticultural research.

The Determining Factors in the Seasonable Activity of Plants. D. T. MacDougal, Tuscon, Ariz.

Factors that Control Acclimatization. Henry C. Cowles, University of Chicago, Ill.

Evaporation as a Climatic Factor Influencing Vegetation. B. L. Livingston, Tuscon, Ariz.

Air Drainage as Affecting Hardiness of Plants. Ernst A. Bessey, Subtropical Laboratory, Miami, Fla.

The Real Factors in Acclimatization. Frederic E. Clements, University of Nebraska.

Plant Improvements Needed in Specific Cases. W. M. Hays, Assistant Secretary of Agriculture.

Comparative Hardiness of Plants of the Same Variety from Northern and Southern Points. J. C. Whitten, Missouri.

Observations on Eucalyptus Hybrids: The Japanese Loquat in Algeria; Truth to Seed of Eastern and African Varieties of Vitis vinifera. M. Robert, Algeria.

Temperate Zone Plants in the Tropics. D. W. May, Porto Rico.

Acclimatization of Economic and Other Plants in the West Indies. D. Morris, Imperial Dept. of Agriculture for the West Indies.

Cooperative Testing to Ascertain Hardiness in Fruits. H. L. Hutt, Guelph, Canada.

Resistance to Cold, Heat, Wet, Drought, Soil, etc., in Grapes. T. V. Munson, Texas.

Developing Hardy Fruits for the North Mississippi Valley. Samuel B. Green, Ohio.

Hardiness of the Peach. U. P. Hedrick, Geneva, N. Y.

Hardiness of Apples. O. M. Morris, Oklahoma.

Complete line of

HARDY PERENIALS

Ready for **IMMEDIATE** shipment.

EASTERN NURSERIES, Jamaica Plain, Mass.

M. M. DAWSON, Manager.

Fruit and Trees in the Northwest. W. S. Thornber, Washington.

Hardiness and Acclimatization of Alfalfa. B. C. Buffum, Wyoming.

Some Work with Timothy and Awnless Brome Grasses. S. Fraser, Geneva, N. Y.

Hardiness of Ornamental Plants in the Middle Northwest. Anthony U. Morrell, Minnesota.

Studies on the Acclimatization of Plants in the Prairie Regions. L. H. Pammel, Iowa.

Observations in the Region at the Head of Lake Michigan. Jens Jensen, Chicago, Ill.

Experiments in Plant Acclimatization in Alaska. Walker H. Evans, U. S. Dept. of Agriculture.

Fifteen Years Experience in Southern California. D. F. Franceschi, Santa Barbara, Cal.

Some Experiences with Field Crops in Virginia. Andrew J. Soule, Blacksburg, Va.

Observations on Hardiness of Plants Cultivated at the New York Botanical Garden. Geo. V. Nash, New York Botanical Garden.

Some Anomalous Observations in St. Louis. W. Trelease, Missouri Botanical Garden, St. Louis, Mo.

Problems of Hawaii. J. E. Higgins, Hawaii.

Promises of cooperation have also been received from W. Robinson, J. Backhouse, and the Royal Agricultural Society, of England; Ph. de Vilmorin, of France; W. Saunders, Canada; and many experiment station workers.

LEONARD BARRON, Secretary,

CONGRESS OF HORTICULTURE.

In addition to the meetings of the American Pomological Society, American Nut Growers' Association, the Society for Horticultural Science, etc., a Congress of Horticulture will also convene at the Jamestown Exposition during the week of September 23-27. The following program of addresses has been issued:

First Session.

Mr. J. H. Hale, Chairman, South Glastonbury, Conn.

(a) Cultural Problems:

Soils, Professor F. H. King, Madison, Wis.

Plant Diseases. Dr. A. F. Woods, Washington, D. C.

Insects Enemies, A. L. Quaintance, Washington, D. C.

(b) Breeding and Propagation:

Horticultural Variation, Dr. H. J. Webber, Ithaca, N. Y.

Principles of Seed Growing, J. Otto Thilow, Philadelphia, Pa.

Vegetables. Dr. Walter Van Fleet, New York, N. Y.

Ornamental Woody Plants, Hon. M. W. Hale, Knoxville, Tenn.

Florists' Flowers, W. N. Rudd, Mt. Greenwood, Ill.

Second Session.

Professor B. Green, Chairman, St. Anthony Park, Minn.

(a) Commercial Growing:

Nuts, Professor W. A. Taylor, Washington, D. C.

Garden Vegetables, W. W. Rawson, Boston, Mass.

Ornamental Plants, Wm. H. Taplin, Brooklyn, N. Y.

Cut Flowers, F. R. Pierson, Tarrytown, N. Y.

Forest Trees, Professor F. W. Rane, Boston, Mass.

(b) Local Horticultural Conditions:

Canada, Professor W. T. Macoun, Ottawa, Canada.

East, John K. M. L. Farquhar, Boston, Mass.

Central West, L. A. Goodman, Kansas City, Mo.

Pacific Coast, Professor E. J. Wickson, Berkeley, Cal.

South, Professor F. H. Burnette, Baton Rouge, La.

Third Session.

Professor S. A. Beach, Chairman, Ames, Ia.

Civic Horticulture, Warren H. Manning, Boston, Mass.

Our National Forests, W. L. Hall, Washington, D. C.

Landscape Gardening, John C. Olmsted, Brookline, Mass.

Schools and Experiment Stations, Dr. A. C. True, Washington, D. C.

Horticulture Press, Leonard Barron, New York, N. Y.

Government Aid, Dr. B. T. Galloway, Washington, D. C.

Federation and Co-operation, J. C. Vaughan, Chicago, Ill.

FORMOSA LONGIFLORUMS

A small shipment of these Lilies has arrived in fine condition. They were thoroughly ripened and dry the first day of June. We have no doubt they will replace the Bermuda lilies in future. We are prepared to deliver large quantities next season.

Trial cases at the following prices:—

Size, 6 to 8 ins.,	400 bulbs in case,	\$12.00 a case.
" 9 to 10 "	200 "	16.00 "
" 10 to 11 "	140 "	18.00 "

THE PHILOSOPHY OF WHOLE-SALING.

(Charles E. Meehan of the S. S. Pennock-Meehan Co., before the Florists' Club of Philadelphia, Sept. 3, 1907).

The wholesale florist has, I believe, done more for the advancement of the flower business in general than any other branch of the trade. He has been the outlet for the enormous quantities of cut flowers which have been coming to our large cities and which could not be disposed of, in many instances, if it were not for him. It is his business to hunt for business wherever he can find it, whether it be in his home town or whether it is one thousand or more miles away. He has created markets for cut flowers and plants that would have been impossible but for his push and energy. His relations to both growers and retailers are of a peculiar character. I have often heard it said that he is between the devil and the deep sea, and I think this is, in a measure, true, as he has a hard time to please both parties. If flowers do not bring as much as the growers think they should, he hears about it, and if they bring good prices, the retailer calls him a robber and other names of like nature, or worse.

Now, let us take up this matter from the standpoint of what the grower has gained. In the first place, I think it must be generally admitted that under present conditions there is only one right way to sell flowers and that is through the wholesaler.

Years ago all the flowers that came to this city were sold direct by the grower to the store men. This was a satisfactory way at that time, but would never do under present conditions. Other and more satisfactory methods have gradually been adopted, and at this time I cannot recall in our city a single instance of a grower, who, having once tried the wholesaler, has gone back to his former ways. This, it would seem to me, is fairly good evidence that it must be satisfactory to those who try it. The reasons for this are many. In the first place, where a man may be the finest kind of a grower, he may be the poorest kind of a salesman. Also, as before stated, there are so many flowers grown around the larger centres that they could not possibly be consumed but have to go to other points. The wholesaler has created

FLOWER MARKET REPORTS

BOSTON Very little change is noted in the demand in this market. An occasional sprint has been offset by dull periods of equal extent and so the average of business is just about normal. Roses are improving daily, and there are some elegant shipments of Carnot coming in. Carnations are beginning to appear in small lots of medium quality. Everything from outdoor sources shows the effect of the continued rain and fog, asters, gladioli and sweet peas coming in abundantly, but in water-soaked condition. The past week has been a bad period for this class of material.

Business, the past week, **BUFFALO** was increasing daily up to Saturday, when there came a halt and the market was overloaded with all kinds of stock which was carried over. Old Home Week, which was on the program, brought many out-of-town visitors, and the effect was somewhat noticeable in the flower line. Floral work was much in demand and the market was in good condition, cleaning up well, up to Saturday. Asters of poor quality came in plentifully, also roses of short grades, which blocked up considerably. Lily-of-the-valley and lilies sold well, as also fancy gladioli. Adiantum and all greens in good supply and demand fair.

Business shows some **DETROIT** signs of revival, and judging from the increased July and August trade this year as compared with last year, the coming season promises to be a hummer. Gladioli, with the exception of America, are a drag. Asters are coming in much better than in former years, but more than the local market can digest.

Business continues **NEW YORK** very quiet. Roses are abundant, particularly the short grades, and are selling low unless of exceptional quality. Carnations are very few, but there is a sufficiency of asters, lilies and lily-of-the-valley. Orchids are in very light supply and sharp demand.

The advent of the **PHILADELPHIA** dahlia is the only ripple on the business sea. Eureka, pink, Mrs. J. H. Jones, red and white cactus, Orange King, Arabella, yellow with bright markings, Standard Bearer and Wm. Agnew, crimson, Countess of Lonsdale and a few others are already conspicuous. Long-stemmed American Beauties are still scarce and the same is true of other staple rose crops. Carnations have improved considerably—prices fair for mid-season. Lily of the valley is cleaning up much better. Album and longiflorum lilies are in fair supply and meet ready demand. Asters are far too plentiful and great quantities of medium to poor stock find an inglorious wind-up on the dump.

DETROIT NEWS.

Robt. Klagge has made extensive alterations in his boiler room and added two new carnation houses.

B. Schroter has at last succeeded in getting mechanics to rebuild his store front. Building operations in this town are so extensive as to make labor very scarce.

The Michigan Cut Flower Exchange is undergoing a thorough renovation.

Gust. Taepke's new range of houses on Elmwood avenue is finished, thereby replacing five old houses with three new up-to-date houses.

A partition sale is advertised by the courts for the Larges estate, comprising 16 acres of garden land, 7 greenhouses, brick house and other buildings.

BUSINESS CHANGES.

E. Guernay has sold his flower store at 108 St. Catharine street, Montreal, to Maillette & Plouffe.

Alburger & Cascaden of Philadelphia have dissolved partnership. The business will be continued by E. Alburger.

INCORPORATED.

Thompson, florist, Chicago, \$2,500; grow and deal in flowers and plants; J. D. Thompson, B. C. Reber and P. W. Peterson.

NEWS NOTES.

The Lakeside Floral Company, Calumet, Mich., have moved into new and commodious quarters on North Fifth street.

The Lutey Floral Company opened for business in its new establishment on Fifth street, Calumet, Mich., on August 31.

Mrs. Thos. F. Johnston announces that she will continue the florist business of her deceased husband at 171 Weybosset street, Providence, R. I.

Peter Boyle, a gardener, aged 35 years, fatally shot his wife and then killed himself, at Pittsburg, Pa., on September 7.

Dr. George E. Stone of Amherst has been engaged throughout the summer in an investigation of the cause of the death of many street trees in Malden, Mass. He finds that gas poisoning is the principal cause of the trouble.

Fire caused a \$3,000 loss at the Perth Floral company's plant, Mason City, Ia., destroying flowers and choice plants, as well as buildings. The origin of the fire is not known, as no one was present when it started.

An order for a casket cover of fabulous price, to be composed entirely of orchids, caused the sending of emergency telegrams to all parts of the country from Thomas F. Galvin's store in Boston on September 10. The goods were secured regardless of expense.

Our correspondent J. B. D. reports that Orange, N. J., which has shown all the evidences of a metropolitan city in point of the summer exodus of wealthy residents to the seaside and mountain, is waking up and the florists' windows are once more in evidence of the looked for trade.

An annually recurring event is due to happen in New York Tuesday, September 17, when W. J. Elliott will waken the echoes at 291 Fulton street with his opening fall auction sale of big kentias and other indoor decorative plants. All the old-timers will be out on this occasion.
